I have the VX-5R, the predecessor of the 7R, and looked into those after first buying my ht. I ended up making my own by printing the help list on card stock in a narrow, small (wallet size) format which folds to the size of a business card.

You will probably find the pocket guides very inclusive of all the functions, many of which you will not use. Rather than cluttering up a guide with those functions, I chose those which would be needed on a more regular basis and one quick look at my guide refreshes my memory. Since you create the guide, you can easily add or subtract functions and print again as usage of particular functions demands.

Edwin & Richard,

I'm going to disagree with Edwin on one point here: I have an FT-890,
and a similar issue, but I found that the most-often used functions
aren't a problem: it's easy for me to remember the things I use the most.

I'd recommend you follow Edwin's advice, but write down the functions
that you use _just often enough_ to need quickly, but not so often
they're on the tip of your tongue. He's right about the commercial
guides, though: it's the whole manual in tiny type, and I never found
them much use, especially when my "cheaters" are in my coat pocket ;-).

73, Bill W1AC

4. ANNOUNCE: rec.radio.amateur.moderated has been created

Newsgroup: rec.radio.amateur.moderated
Date: 2007-02-23 18:59:02 UTC
From: The Big-8 Management Board <board@big-8.org>
Message-ID: <nan.20070223185902$4bc4@killfile.org>
Source record: 5395
Cross-posted to:
rec.radio.amateur.moderated,rec.radio.info,news.announce.newgroups,rec.radio.amateur.policy,rec.radio.amateur.misc

On 19 Feb 2007, the Big-8 Management Board decided to create the moderated group rec.radio.amateur.moderated. The group was created on 22 Feb 2007.

For more information on the proposal and history, please refer to the archives:

ftp://ftp.isc.org/usenet/news.announce.newgroups/rec/rec.radio.amateur.moderated

For your newsgroups file:
rec.radio.amateur.moderated Amateur radio practices, rules, etc. (Moderated)

CHARTER:

rec.radio.amateur.moderated is for the discussion of amateur ("ham") radio, also known as the Amateur Radio Service, as defined in Federal Communications Commission Regulations and U.S. Law (47 CFR Part 97), and in similar laws and regulations in other countries, based on international treaty. It is not limited to the rules of any one country or time period. Possible topics include past, present, and future operating practices; events; contests; past, present, and potential-future rules; power limitations; authorized frequencies; allowed modes and band plans (or other gentlemen's agreements) that govern how we are to operate; what constitutes the acceptable operation of amateur stations.

The newsgroup is intended to be international in scope, not just for amateurs in the United States. It is, however, intended as an English-language forum, by custom and practice. As with General Aviation and other internationally-scoped endeavors, the Amateur Radio Service has a strong custom of the use of English and the Latin alphabet. Discussion of amateur radio in languages other than English also occurs in many country- and region-specific hierarchies, many of which have specific amateur radio newsgroups, including:

de.* (Germany)
dk.* (Denmark)
es.* (Spain)
fr.* (France)
nl.* (Netherlands)
pl.* (Poland)
pt.* (Portugal)
relcom.* (Russia)

This newsgroup is only intended to supplement, not supersede, any other amateur radio newsgroups.

General communications law or government policy of various government agencies is also on-topic, as long as the discussion relates to amateur radio. Examples would be emergency communications, local antenna restrictions, and property deed restrictions applying to operation of amateur radio stations.

Discussion of other types of radio, such as Citizens Band, Broadcast, other Personal Radio Services, Commercial or Private Land Mobile, and Marine or Aviation services are off-topic, except when *directly* related to amateur radio. Similarly, discussion of methods violating applicable communications law and regulations concerning radio equipment or operations are off-topic.

The following are prohibited:

* Personal advertisements (submitters of such articles will be referred to rec.radio.swap, instead).
* Commercial advertisements and money-making schemes.
* Chain letters.
* Posts in HTML.
* EMP spam.
* Binaries, apart from PGP signatures, X-Face headers, and other ancillary article meta-data.
* Forgery of valid e-mail addresses.
* Excessive morphing/nym-shifting.
* Copyright violations. Pointers to news articles, blogs, etc. on this topic are welcome but are required to comply with fair use standards.
* Personal attacks and flames, as defined by the moderation team.
* Advertising items and/or services for sale (also will be referred to rec.radio.swap).
* Links to "objectionable" web content, including pornographic sites, sites encouraging illegal activities, or sites deemed unacceptable by the moderation team. The moderation team will cursorily check the contents of specific links to confirm on-topic content, but acceptance for posting does not imply endorsement or approval of the entire present or future contents of that web site.
* Discussion of moderation decisions. See below for information on appealing moderator action.

LINKS:

Amateur Radio Newsgroups in Total Meltdown (QRZ)

Secure, Team-Based Usenet Moderation Program (STUMP)
http://www.algebra.com/~ichudov/stump/

MODERATION POLICY: rec.radio.amateur.moderated

A moderation robot will scan all submitted posts. Each post will be either automatically approved, rejected, or sent to the moderators for manual review. The moderator 'bot will enforce the following guidelines:

* Crossposting is generally not allowed, with the general exception of crossposts of bulletins, FAQ's, and other informational articles to rec.radio.info, rec.answers, and news.answers. Infrequent administrative crossposts may occasionally be allowed at the sole discretion of the moderator.

* Postings must be in plain text. In particular no HTML or mixed text and HTML posts will be allowed. Messages that are multipart/alternative will be automatically filtered to pass just the text/plain version to the newsgroup.

* No binary postings of any sort will be accepted. Exceptions will be made for cryptographic signatures and such.

* Messages must not have a 'Followup-To' header that points out of rec.radio.amateur.moderated (other than to "poster").

* Messages must not continue a thread that has been "closed" by the moderators.

Individual posters may be temporarily banned for consistently violating the group charter. Posters who feel that their posts have been unfairly rejected or banned, either for specific content or by a specific moderator, may appeal the decision. They may do so by contacting the Appeals Board, consisting of a rotating group of 2 or more moderators, at the Administrative Contact address below. The Board will discuss and vote on the appeal and respond within 14 days if the appeal is successful. The Board will also reply within 14 days to unsuccessful submitters of any appeal that is on-topic, reasoned, civilly stated, and is not substantially an attempt to revisit the subject matter and arguments of a previous unsuccessful appeal.

Multiple temporary bans, attempting to circumvent the ban, or abuse of the appeal system may result in a permanent ban.

MODERATOR INFO: rec.radio.amateur.moderated

Moderator: Paul W. Schleck, K3FU <pschleck@novia.net>
Moderator: Bob Diepenbrock, KC4UAI <bob_deep@yahoo.com>
Moderator: Jack Cook, VK2CJC <vk2cjc@bigpond.com>
Moderator: Jim Hampton, AA2QA <aa2qa@frontiernet.net>
Moderator: Ace Ratliff, WH2T <ace@wh2t.com>
Moderator: Jeff Angus, WA6FWI <jangus@socal.rr.com>
Moderator: Hans Brakob, K0HB <k0hb@arrl.net>

In addition, the rec.radio.amateur.moderated Moderation Team will utilize the expertise of the following consultants:

Consultant: Cecil A. Moore, W5DXP <Cecil.A.Moore@ieee.org>
Consultant: Phil Kane, K2ASP <k2asp@arrl.net>
Consultant: Brian Short, K7ON <k7on@cox.net>

The moderators are seeking additional candidates for the moderation team in order to ensure minimal posting delays and to avoid any appearance of bias. We would especially like to find moderators in other time zones, countries/continents, etc.

5. Crossband repeat

Newsgroup: rec.radio.amateur.moderated
Date: 2007-02-23 21:34:15 UTC
From: Steve Bonine <spb@pobox.com>
Message-ID: <12tumarqt577r3a@news.supernews.com>
Source record: 5396

As the time of year approaches to begin thinking about hurricanes and disaster communications, I'm going to upgrade my 2-meter rig with one that is capable of crossband repeat. I would like for this same radio to double as my in-shack equipment during normal times.

I'm looking for something with enough power to handle marginal conditions, rugged and able to handle high temperatures and long duty cycles, and reasonably easy to operate in the field. (I don't mind needing a computer and software to set up lots of memories, but I need to be able to program in an unknown repeater in the field when the computer isn't available.) Naturally the vendors assure me that all their new gear can do this, but somehow I'd rather hear it from people who have actually done it in the heat of battle.

73, Steve KB9X

I have a YAESU FT-8500 from as early as 1995 which apperars to meat your reuirements, and I'm sure that at lot of newer dual-banders also meat your requirements.

I've had no faults what so ever on mine sine I bought from new in 1995. The newer models might be simpler to operate.

8. ARS License Numbers

Newsgroup: rec.radio.amateur.moderated
Date: 2007-02-23 23:36:11 UTC
From: N2EY@AOL.COM
Message-ID: <1172270812.015451.248090@j27g2000cwj.googlegroups.com>
Source record: 5399

These are the numbers of current,
unexpired FCC-issued amateur
radio licenses held by individuals
on the stated dates, and the
percentage of the total number
of active licenses that class contains:

As of May 14, 2000:

Novice- 49,329 (7.3%)
Technician - 205,394 (30.4%)
Technician Plus - 128,860 (19.1%)
General - 112,677 (16.7%)
Advanced - 99,782 (14.8%)
Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total General/Advanced/Extra - 291,209 (43.2%)

Total all classes - 674,792

As of February 20, 2007:

Novice - 22,893 (3.5%) [decrease of 26,436]
Technician - 293,177 (44.8%) [increase of 87,783]
Technician Plus - 30,881 (4.7%) [decrease of 97,979]
General - 130,092 (19.9%) [increase of 17,415]
Advanced - 69,040 (10.6%) [decrease of 30,742]
Extra - 108,205 (16.5%) [increase of 29,455]

(percentages may not add up to exactly 100.0% due to rounding)

Total Tech/TechPlus - 324,058 (49.5%) [decrease of 10,196]

Total General/Advanced/Extra - 307,337 (47.0%) [increase of 16,128]

Total all classes - 654,288 (decrease of 20,504)

Note that these totals do not include licenses
that have expired but are in the grace period.

They also do not include club, military
or other station-only licenses.

Note also that effective April 15, 2000, new Novice,
Technician Plus and Advanced licenses are no longer
issued.

Since April 15, 2000, FCC has renewed all
existing Technician Plus licenses as Technician. By May of 2010, the
number of Technician Plus licenses
should drop to zero, because all of them will have been renewed as
Technician or allowed to expire. It is therefore
informative to consider the totals of the two classes,
since the Technician class includes a significant
number of Technician Plus licenses renewed as Technician.

That's the way I use my old Alinco DR-570. Works like a charm.

IMHO, the TS-520 is the '57 Chevy of ham rigs. (Or is it the '65 Mustang, or the '67 GTO?) In any case, $175 at a flea and abt $75 for a new set of tubes (GE 6146Bs MP) got me a fun rig! It does everything I want except WARC bands.

I have an 897D as my main shack rig, an 857D in the car, and an 857 as the second shack rig. They're essentially the same radio in two unlike packages, the 857 being optimized for mobile use.

I quite like them, though I'd like more front panel controls and less menu-diving to change things.

The 897D (and 857D), as they ship, have quite decent receivers, though they're not up with a Watkins-Johnson or Cubic surveillance RX, or even with my good R-390.

I'm sure they have shortcomings; I just haven't yet been hit severely enough by any to remember it.

Steve,

I've used the FT8100R in this role in the past. The manual did a
fairly good job of explaining the setup.

14. Re: ARS License Numbers

Newsgroup: rec.radio.amateur.moderated
Date: 2007-02-24 18:18:52 UTC
From: N2EY@AOL.COM
Message-ID: <1172338842.904237.268970@k78g2000cwa.googlegroups.com>
Source record: 5405

This is a special listing of the ARS license numbers,
the last totals before the FCC rules change dropping
all Morse Code testing went into effect.

Future postings of these numbers will use a somewhat
different format, to show comparisons to both May 14,
2000, and February 22, 2007.

I intend to post these numbers once per month, on or about the 23rd of
the month. I also intend to post the totals on or
about March 1, 2007, as a one-time thing.

These are the number of current,
unexpired FCC-issued amateur
radio licenses held by individuals
on the stated dates, and the
percentage of the total number
of active licenses that class contains:

As of May 14, 2000:

Novice- 49,329 (7.3%)
Technician - 205,394 (30.4%)
Technician Plus - 128,860 (19.1%)
General - 112,677 (16.7%)
Advanced - 99,782 (14.8%)
Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total General/Advanced/Extra - 291,209 (43.2%)

Total all classes - 674,792

As of February 22, 2007:

Novice - 22,896 (3.5%) [decrease of 26,433]
Technician - 293,508 (44.8%) [increase of 88,114]
Technician Plus - 30,818 (4.7%) [decrease of 98,042]
General - 130,138 (19.9%) [increase of 17,461]
Advanced - 69,050 (10.5%) [decrease of 30,732]
Extra - 108,270 (16.5%) [increase of 29,520]

(percentages may not add up to exactly 100.0% due to rounding)

Total Tech/TechPlus - 324,326 (49.5%) [decrease of 9,928]

Total General/Advanced/Extra - 307,458 (47.0%) [increase of 16,249]

Total all classes - 654,680 (decrease of 20,112)

These totals do not include licenses
that have expired but are in the grace period,
nor do they include club, military and other
station-only licenses.

Effective April 15, 2000, FCC no longer issued
new Novice, Technician Plus and Advanced
class licenses.

Also since April 15, 2000, FCC has renewed all
existing Technician Plus licenses as Technician.
It is therefore informative to consider the totals of
the two classes, since the Technician class
includes a significant number of Technician Plus
licenses renewed as Technician.

Steve,

It's always a good idea to have a rig with good capabilities, and any of the commercial units that advertise cross-band repeat will fill that need.

I feel compelled, however, to sound a note of caution: I've been involved with disaster preparedness for many years, and was even on the Boston Esplanade helping to manage the medical responses and lost children during the July 4, 1976 Pops concert that drew the largest crowd ever recorded in Boston's history.

The long and short of it is that _WE_ are the most important asset in an emergency and that _WE_ are most in need of preparation. If we're going to represent ourselves as being ready to help during times of crisis, then the practical knowledge and preparedness we bring with us will outweigh any single radio.

A cross-band repeater might, or might not, be the "Deus ex machina" that solves all your team's problems - but don't count on it, because technology is the least important weapon in a ham's arsenal when the chips are down. I once owned a fancy and delicate radio that I hesitated to take out in the rain or loan to another ham: now, I have three basic HT's and I invest in myself and my capabilities instead.

Having regular exercise, which is free, has better prepared me for an emergency than any amount of money could have. Knowing the capabilities, limitations, and advantages of RG-8 has made it possible to connect thirty-year-old ground planes cut for 46 MHz to two-meter radios and have them in service in minutes instead of hours. Participating in

regular drills, although inconvenient, has been twice as valuable as any piece of hardware could have been when I was tired, hungry, irritated, wet, and constipated.

The most important asset we can bring to any deployment, no matter what the situation or the location, is _adaptability_. Although having good technology is helpful, having good practice and common sense and a "can do" attitude will always get you through when technology lets you down.

HTH. YMMV.

73, Bill W1AC

P.S. Whatever you do, don't forget extra batteries, duct tape, and toilet paper. You can use the bag the duct tape came in to wrap the toilet paper, and trust me on this - wet duct tape is a lot easier to use than wet toilet paper. ;-)

(Remove "73" and change the top level domain for direct replies)

I think you have it about right. Maybe rigs like the TS-520, TS-120, TS-130, Yaesu FT0101/A/B/E/EX and the Heath SB-100/101/102 and HW-100/101 are more like the Chevy Vega of amateur transceivers. They do the basics pretty well. They have RIT and can be used with an outboard VFO to make DXing fun. The best part is their affordability. Amateur radio does not have to be expensive in order for one to derive a lot of enjoyment. There are still companies selling accessory filters for all of the rigs mentioned.

I certainly agree, Bill. But I need to upgrade my equipment, and as long as I'm buying something, I want to be sure that it does what I need. Based on experience during Katrina, crossband can be a valuable capability. But that's all it is -- a capability.

By the way, thanks to everyone who chimed in their opinion on equipment. I have to admit that I did not realize that crossband capability has existed for so long. I was not active on VHF during the 90's when it was apparently in its heyday. I thought it was a relatively new development. I don't need the latest and greatest, so maybe I can find something that's older and will do what I want.

> I once owned a fancy and delicate radio that I hesitated
> to take out in the rain or loan to another ham: now, I have three basic
> HT's and I invest in myself and my capabilities instead.

Since right now I'm investing in myself, doing some training, I agree.

One of the people that I worked with in Mississippi during the Katrina effort had recently purchased several "old" 2-meter radios on eBay, just for the purpose of having them available for his ARES group. These were invaluable, along with his seemingly-endless supply of barrel connectors, coax, cigarette lighter adapters, and all those "little things" that make the difference between being effective and being frustrated.

When we were called upon to provide communications for Red Cross ERVs (Emergency Response Vehicle; the ones that they use for mobile feeding and other similar assignments) we were stymied because there's no place to use a mag mount. The vehicles are almost 100% fiberglass, and even the hood is non-magnetic. We used the whip that was intended for the Red Cross radio, which is cut for 47 MHz. It worked just fine on 144 MHz. The coax run was short enough, and the radios had sufficient power and auto-shutdown based on SWR, that we were able to easily hit the

repeaters that we needed to use.

Perfection is not needed. Resourcefulness works wonders.

> Participating in
> regular drills, although inconvenient, has been twice as valuable as any

> wet, and constipated.

I will probably get some flak for this statement, but the hams who
really disappoint me are the ones who never have time for the training
sessions, the drills, or even the regular net session, but their mantra
is, "If you ever need me, I'll be there." Yeah, you'll be there all
right, but you'll be part of the problem, not part of the solution.

I'm a great believer in the KISS principle, and simple is almost always
better in a disaster situation. The people are much more important than
the technology.

I hope I'm not beating a dead horse, but I'll emphasize the point
another way: two simple radios will often cost only slightly more than
one feature-rich rig.

Glad to here it: nothing more useless than a good radio without an
antenna, except for an operator who doesn't try every option.

In the event I remember, it was actually the _long_ length of the RG-8
that I was depending on: since the antennas were 70+ feet away, I knew
that the loses in the cable would obviate any SWR issue. In fact, Ed
Tilton's favorite microwave dummy load was a long length of unterminated
coax.

> Perfection is not needed. Resourcefulness works wonders.

Amen.

I was present at at public-service event where a ham who weighed over 300 pounds volunteered to accompany a group of firefighters who were about to respond to a fuel spill. The firefighters, all professionals in excellent condition, told him that they were not trained to handle heart attacks and that he would not go with them. He was, to put it mildly, upset, but he went on a diet and started operating bicycle mobile, so the firefighters did him a big favor by making sure that he wouldn't have a heart attack in the first place.

This brings up another important, and often overlooked, aspect of emergency preparedness: the men and women who do it for a living train hard, and work hard, and talk hard. Ham's with thin skin have no place in disaster response, because the other people who are paid to be there are also paid to speak the truth, bluntly and quickly. "Check your ego at the door" is the best advice anyone can give or receive.

[snip]

Glad to have met you: if you're deployed to New England during our next earthquake, I'll share my duct tape :-).

20. Human-powered portable power generation

Newsgroup: rec.radio.amateur.moderated
Date: 2007-02-25 03:10:39 UTC
From: "Bill Horne, W1AC" <billhorne73@comcast.not>
Message-ID: <erquio$2ur$1@victor.killfile.org>
Source record: 5411

Fellow hams,

KB9X's thread about cross-band radios has reminded me of an old question that I've wondered about during many public service events, usually at the point when my nicads die and I realize that the spares are on the other side of a wall of people.

As we all know, and many have experienced, discharged nicads that aren't charged quickly can go permanently bad. I've had a couple of occasions where I had to "zap" dead nicads by putting them is series with automobile headlights, but when I did it I couldn't help but think there has to be a better way.

The problem isn't limited to nicads: even with NiMH batteries, discharged is still "dead", even if they don't get damaged, so I'd like to be able to charge any kind of battery with a human-powered source. There's never an AC outlet, or even AC, when and where you need it, and I'd appreciate you sharing any expertise or ideas.

I don't want to limit this to portables: let's talk about possibilities for fixed stations as well. We've all seen the old WWII movies that showed someone cranking a hand generator or using a pedal-powered device to get on the air, and I wonder if these gadgets can be recreated from parts that are almost always available everywhere, namely car alternators and car batteries. I'd like to have a set of plans that I could use to construct something quickly.

All ideas appreciated.

73,

Bill W1AC

May I suggest doing the one-time special posting to be for a March 9th
date? With the large number of upgrades that may be going in, it
could take a bit longer for them to get processed.

Jim,

I'm not certain of the underlying analytic reason for this particular two-bucket breakout of the statistics, but I often wonder why it ignores the Novice class. Maybe Novices are irrelevant to the point you're highlighting, or it is considered a "dead" license class, but in that sense, so is Advanced. I guess my question is "where is the Novice bucket?"

Couple of thoughts from my experience.

First, for portable devices.

One of my other hobbies is backcountry hiking in the Superstitions (in the winter) and exploring the BWCA (in the summer). I carry GPS and MURS/FRS radios. My solution is to carefully plan my trips and carry charged (or alkaline) spares at a rate of 200% of what I expect to need. The logistics of carrying some 'charging system' is simply untenable in these environments, since they'd be bulkier/heavier than a few spare hot batteries.

Second, for fixed stations.

My home station is AC-centric, so human-powered sources aren't as good a solution as the small 3kw Honda generator which also powers my RV when I go boonie camping.

73, de Hans, K0HB

PS: Besides, I had enough of hand-cranked transmitters in the Navy --- my 'abondon ship' duties included toting/operating an AN/CRT-3 "Gibson Girl" transmitter.

Absolutely. I think I had more fun when I had least "disposable income".
Scraping together old unwanted equipment to make up a station was far more
challenging and rewarding than signing a large cheque and waiting for the
boxes to arrive.
I'd recommmend everyone try that approach sometime.

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate
articles, it was decided to create the group as a moderated newsgroup.
```

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

26. rec.radio.info Posting Guidelines

Newsgroup: rec.radio.amateur.moderated

Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rri/index.html

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every two weeks. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.

The site from which we moderate this newsgroup, "Public Access Internet
and Unix, NYC" (Panix), is directly connected to the Internet, and
```

articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions
rec.radio.shortwave International broadcasting on the 'HF' bands

rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org>

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Have you ever actually *used* one of those WWII generators? <grin>

Many years ago, my Field Day partner and I decided to use one of those devices to get a few "alternative power" contacts. My memory of the rules is foggy, but I think that if you made a few contacts using something other than a gasoline-powered generator, you got a significant bonus, score-wise.

So my buddy somehow acquired one of those devices. He must have found one at a surplus store.

Anyway, the point is that they're *very* tiring to use. You see this vintage footage where they're in use, and you forget that they guys making them work are probably 18-20 years old. I was dismayed at how hard I had to work to get a few watts of power. Plus, the device was very heavy and unweildy.

On the other hand, you occasionally see these flashlights or radios that are powered by a crank that winds a spring and as the spring unwinds it generates enough power to create light or run the radio. So the technology has improved since the vintage model that we used for FD. Maybe it's now efficient enough (and small/light enough) to be usable.

(Yes, we did make the required contacts and receive the bonus points.)

Hans,

The two subtotals are in response to questions/issues
raised long ago.

The Technician/Technician Plus total was added in
response to claims that the Technician was the fastest-
growing license class, which somehow proved some
point or other. Of course the Technician *was* the
fastest growing class, because after 4/15/2000
all renewed Technician Pluses became Technicians.
Looking at the total revealed that a net loss rather than
gain since 4/15/2000.

The General/Advanced/Extra subtotal was added in
response to a request to subtotal the licenses that
give "lots of HF privileges", compared to those which
do not. Perhaps it is no longer relevant to the discussion.

One fact that interests me is that the Advanced has
decreased in number (compared to what they were
before 4/15/2000) far more slowly than the Novice,
even though both are no longer issued, and are not
subject to automatic license class change.

What "buckets" would you prefer to see?

Good idea, Dee. That will give two weeks rather than
one since the rules change.

I recall that immediately after the restructuring of 2000,
hams who upgraded reported delays of up to several
weeks before their info showed up in the FCC database,
due to volume at both the VECs and FCC.

Look for the next post full of ARS numbers around
March 9th.

How about including all US hams?

Total Novice/Tech/Tech+ = 56.8%

Total General/Advanced/Extra = 43.2%

That splits the classes 3/3 and shows the average US amateur radio operator licensee to be in the Novice/Tech/Tech+ group. I will predict that, before 2010, the General/Advanced/Extra group will be in the majority once again.

There's a big difference between powering a receiver and powering a
transmitter. I have a Sony that receives for many hours on a single
AAA battery. But 100 watts output from a transmitter cannot be
reduced below 100 watts of supplied power. Given that efficiency may
be around 50%, 200 watts of human generated energy is a heck of a
lot of calories. Need to lose some weight?

34. New government rules mandating hands-free devices in vehicles

Newsgroup: rec.radio.amateur.moderated
Date: 2007-02-25 17:07:02 UTC
From: John Doe <hgorden@adelphia.net>
Message-ID: <lOKdnf5F0JQuNHzYnZ2dnUVZ_rylnZ2d@adelphia.com>
Source record: 5425

(See Title 32 of the CFR Part 634 Section 634.25 paragraph (3))

This is FEDERAL not just some state or city. It applies to all personnel on all federal installations (military posts, VA hospitals, national parks, national forests, any other federal property with its own roads). It also applies to all military personnel on and off post, on and off duty.

A revision to the Code of Federal Regulations mandates that all federal installations prohibit the use of cellular phones, PDAs, and similar communication devices by persons operating motor vehicles, unless used with a hands-free device. Effective 1 March 2007, the use of such devices without hands-free devices will be prohibited on [this installation]. This regulation applies to all devices using cellular technology. Cellular systems built into the vehicle and activated by voice or push-button (On-Star) are considered hands-free. An earpieces used in one ear or headphones are the only other approved hands-free devices for motor vehicle operators.

Radio communication devices (hand sets or "mikes") may only be used by operators if the radio device is mounted (wired) to the vehicle. Use of walkie-talkies or phones in the direct connect mode is not authorized. This includes the use of Motorola or other "Brick" type radios in GOVs and POVs. The use of tactical radios in tactical vehicles is not subject to this regulation.

The use of video technology in any playback mode, by the driver, is prohibited. The only exception is the use of vehicular-mounted navigation systems.

Any vehicle operator desiring to use cellular phones, PDAs, and similar communication devices without a hands-free device may do so only after safely exiting the roadway and placing the vehicle in park. The wearing of portable headphones, earphones or other listening devices while operating a motor vehicle is prohibited.

Operators found in violation of this policy during the grace period of March 1, 2007 through April 1, 2007 will receive a warning ticket. Beginning 2 April 2007, violators will be ticketed. Violation of the above stated policy may result in suspension or revocation of post driving privileges, the assessment of points, and/or a fine.

These restrictions apply to all personnel on post and to military personnel both on and off post regardless of their duty status.

There is one legal problem with using a dual-band rig as a crossband repeater. Both the 2-meter and 70-cm sides are ham transmitters, and must be ID'd every 10 minutes and at the end of every series of transmissions, just like every other station and repeater. See this article:

How can I legally make my VHF/UHF station into a crossband repeater?
http://www.arrl.org/FandES/field/regulations/faq-aux.html#_Toc70492016

Some people say "In an emergency, all rules are out the window, and anything goes." Maybe, but I doubt it; I think ID rules still apply during emergencies. But whenever you practice communication procedures (and you must practice to make sure it will work in an emergency), all the rules apply.

I personally expect to see the General/Advanced/Extra group to be in the majority in a year myself. In my opinion, the only reason it would not occur that fast is if there is a significant percentage of Techs/Tech+ who are inactive and don't know about the licensing change.

Based on personal experience, I can understand why one might not include the Novice group. I've not encountered any on the air and a check of our club roster here shows no Novices. If there are any active Novices out there, they are as scarce as hen's teeth. The license numbers (they've dropped by over 50%) seem to support the thought that they have either upgraded by now or are inactive. There will be a few exceptions no doubt.

I'd be interested in seeing the source of this excerpt. (It isn't the cited Title 32 of the CFR Part 634 Section 634.25 paragraph (3))

My guess is that what the author has posted is a local implementation, such as an excerpt from some Army base regulation or similar document. A CFR wouldn't single out "military personnel both on and off post regardless of their duty status" or specify dates for grace period "warnings".

It is well documented that a very "FIT" human male can output in
the 100 Watt range on a well designed peddle powered Generator.
Most of the WWII handcranked gensets powered radios in the 20
- 40 watt range. Australia' Peddle Powered HF Sets were also
in the 40 watt range.

Sounds similar to the regulations we now have here in the UK, although the law here is specifically limited to cellular devices, normal 2-way radio equipment is exempt, so we amateurs are ok, although of course if the police really wanted to, we have the offence here of driving without due care and attention, which really covers it, but there was a lot of complaining by pressure groups that got the phone law introduced.

Of course we all use hands free equipment on both our phones and amateur radios anyway, don't we ;-)

There's another problem as well in some countries, it's not permitted at
all in the UK (and the rest of Region 1 AFAIK) :-(

Years ago when I was doing ship radio safety inspections, we had to
test the lifeboat hand-cranked radios. We would always ask the master
to assign one of the seamen (affectionately called "deck apes") to lug
and crank it. I tried doing it myself once - and once was enough. I'd
rather operate the radio...

Same situation here in Australia.

Although I always felt that the only thing that made "two way radio" exempt
from the regs was that the police and ambulance guys would then be unable to
use their radios without a second operator.

I wonder if they have thought of that in the US?

Dear OM's

lovely discussions about communications in disasters.
in the beginning of amateur radio it was a great help however!
first the organisation of first aid and the nescesarry communicarion is
the responsibillety of the authorety and politici
They make risk analyses and in it there are calculated victems each body
has its price!
It's fine that we OM's from different nations and cultures may discuse this
openly
We are intended to help without questions different rules makes it not
easely

for exampel
years ago there was a big breakdown of electricty in the northerpart of PA
troubles in communications police ambulance fire workers security etc each
service had their own frequency and channels and band disciplens
How can you than communicate ? it is like buying bread from a recent
discovered tribe living in the stone age
shortly a group of legal and illegal ham's build a emergynet FM radio's
tuned to police channels at 86 mc relaided to 145 and 433 mc illegal
transmitted by broadcastamateurs to 86 mc again
So we accompanyed a traffic accedent and a troubelsome delivery to a
hospital
A couple of months later speaking a policeofficer he told us abaout a
scrambler and that it was unpossible that we could do the job again.
My simple answerd if he knows how that new rig works with al l the used
components and frequencies give me a lot of trouble SSB like distorsion of
the audio

example 2
late 70 surf accident at coastal sea
windsurfer surfing at force 8 a 9 slipped of his board could not find it
back because the high waves .
truck driver sees it happening and used his CB set ignored!!!!
lucky to the surfer A cber ringed a radarpost and the operator could see the
surfer
Life boat out troubles could not find the surfer becuase the waves
radaroperator could not communicate the lifeboat mariphone at 156.8 mc
Lucky guy in the waves. a police officer ham too noticed that his potobel
ham set was abble to transmit out of band did not know how.Local home net
gives the answer and the radarpost was abled to accompagny the lifeboat at
time.

Now the emergy services have a brandnew system with the diapers problems
too mainly potentionproblems who is responsebel for what politics
Had we to solve this problems
I spoked a local politicus about the emergy flyers now to day needed for
terrorist attacs.the stupid things in it and foolish solutions of suspected
problems
close your windows because there is no problem for your health and listen to
the blowed up local radiostation without power
He noticed that always radioamateurs do a great job we are a reliable
service. so the politici know the problem to solve it it costs money
I' now back again at my remark However ???? !!!!!!
See you down in the log

46. Formula for Q of resonant circuit?

Newsgroup: rec.radio.amateur.moderated

Source record: 5437

I am trying to find the formula used to calculate the Q of a
parallel R-L-C resonant circuit. There are a number of questions in
the Amateur Extra test pool[1] that ask this and the formula that I
have does not produce the correct answers.
I have been using Q = (2 * Pi * f * L) / R, but the questions in
section E5G of the test pool don't seem to work with that. The
answers that are produced by that formula are among the
"distracters," suggesting that I am making an obvious error that they
expect some people to make.

This is an interesting point, and one that I had not considered. I thought about ID, but not on the UHF output of the crossbanding unit.

I don't remember seeing any available gear that supports an automated id for this transmitter, but then again I wasn't looking for it specifically. Anyone know of a rig that can do the id?

There was a very interesting article in the latest Invention magazine about
the development of cell phones made possible only because of the short range
cellular concept and improved batteries.

As to human power... the Daedalus human powered airplane that flew the Greek
islands got its power from an athlete. The actual power that can be
generated from a human being for an extended period is something like one
tenth of a HP... in theory something like 75 Watts... but as has been shown
in this thread, seems like by the time all the juice goes through all the
resistors you only get something like 40 Watts.

It's obvious that this formula for Q is not valid for a parallel
RLC-Circuit. If you let R go towards infinity, by this formula,
the Q goes to zero, although it should obviously be infinite,
since the circuit has no losses.

The correct formula is Q = R / (2*pi*f*L) = R * 2*pi*f*C

>
> Total General/Advanced/Extra = 43.2%

Back in May of 2000, yes.

But in February of 2007, it works out to:

Total Novice/Tech/Tech+ = 53.0%

Total General/Advanced/Extra = 47.0%
>
> That splits the classes 3/3 and shows the average US amateur radio
> operator licensee to be in the Novice/Tech/Tech+ group.

It is more accurate to say that the Novice/Tech/Tech+
group has a slight and shrinking majority over the
General/Advanced/Extra group.

The formula you used for Q is for a series resonant circuit - call it Qs.
For a parallel resonant circuit, you should calculate Q as Qp = 1/Qs.

That is, at the end of your calculation, hit the "1/x" key on your
calculator.

(See also http://en.wikipedia.org/wiki/RLC_circuit)

On Feb 25, 4:40 pm, M J Dowden <mjdow...@panix.com> wrote:

> I have been using Q = (2 * Pi * f * L) / R,

That's the formula for Q in a series resonant circuit. It's upside down from what you need for a parallel resonant circuit.

What you need is this formula, which is used for parallel RLC circuits:

Qp = R / (2 * Pi * f * L)

It's easy to remember which to use if you consider that in a parallel resonant circuit, increasing the resistance in parallel with L and C increases the Q. In a series resonant circuit, *decreasing* the resistance in series with L and C increases the Q.

> but the questions in
> section E5G of the test pool don't seem to work with that.

Try again with the formula above.

Some simplifications help, too:

1) There are combinations of units that result in exponents cancelling. For example, MHz times microhenries is 10^6 times 10^-6, effectively eliminating them from the calculation.

2) 2 * pi is 6.28 for almost all work.

3) The inductive reactance, aka XL, is (6.28 * f * L).

E5G01 (A)
What is the Q of a parallel R-L-C circuit if the resonant frequency is 14.128 MHz, L is 2.7 microhenrys and R is 18 kilohms?

First we figure out XL

XL = 6.28 * 14.128 * 2.7

Since we are dealing in microhenries and megahertz, the 10^6 and 10^-6 exponents cancel out, and XL = 239.5 ohms.

Then we divide R, which is 18,000 by XL, which is 239.5 ohms

Answer: 75.15

The choices on the exam are:

A. 75.1
B. 7.51
C. 71.5
D. 0.013

Clearly the answer is A. The answer isn't exact because of rounding of 6.28 and 239.5.

Try some others in the pool.

That formula is for the Q of a series circuit. The formula for the
Q of a parallel circuit is the reciprocal of that formula.

I think there are a considerable number of US hams who
are inactive, and a considerable number who don't
know about the rules changes. Within the past year
I have had occasion to explain the *2000* rules changes
to several licensed hams who were not aware of how that
restructuring affected them. In a couple of those cases,
an upgrade resulted.

Agreed, but every month FCC reports at least some Novice
renewals. Sometimes there are enough renewals that the
Novice total actually climbs for a day or two.

A unique characteristic of the Novice license today is that
it now carries no test element credit at all towards an upgrade.

I think the Tech/Tech Plus total serves a useful purpose,
because it is an automatic license class change upon
renewal.

I agree that the General/Advanced/Extra total doesn't serve
much of a purpose anymore. It will be discontinued in
future "ARS License Numbers" posts of mine.

If anyone wants those totals, they will be easily calculated.

> Let's move forward.

Look for the next totals on or about March 10th, in a revised format.
Then once a month, on or about the 23rd.

"Tech+" was dropped some time back, is not recognized at FCC as a license class, and as of 2/23/07 there is no distinction in privileges or any other practical difference between it and plain old "Tech". A Tech is a Tech is a Tech.

Couple of ideas:

1) If you use batteries, the recharger doesn't have to
supply enough power to operate the rig at maximum
demand - only average demand. If a rig draws 4 W on
receive and 20 W on transmit, and you transmit 10% of
the time, a 6-7 watt source should be more than enough.

2) A small solar panel can provide a trickle charge for
NiMH/nicad batteries. Of course it doesn't work at night.

3) Costco and others sell a small crankpowered LED flashlight. No
springs - winding the crank charges the batteries.

4) Or you could follow G5BD's example:

The guys on the Kon-Tiki raft expedition in 1947 used a hand cranked generator. I guess hearing Thor Heyerdahl read the Kon-Tiki book aloud on the radio when I was 9 was one of the things which pushed me in the direction of ham radio. The radio operators on Kon-Tiki had been making clandestine transmissions out of occupied Norway a few years earlier.

Some months ago a portable, steam powered WWII agents' generator was on ebay.

Back in the mid 50's on patrol in the Formosa Straights I had daily challenges to read code being jammed by the Chinese. I knew then, that only Morse code would be a viable means of communication. Even as we, in the Navy, were installing the new teletype systems. A single ping of interference on the teletype signal would cause an error. Then came Single Sideband, and then digital.

What I'm getting at is what I read about the recent battle between Israel and the Iranian sponsored terrorists and how they were able to almost disrupt communications through jamming techniques, but the Israeli's prevailed through the use of line of sight technology.

Is this the wave of the future for ham radio as well? I've been out of the technology for a long time, so forgive the obvious ignorance in my question.

We used to bounce waves off the stratosphere and I can only assume that today you are bouncing waves off the moon and artificial satellites?

Fellow ham,

A post from LA4RT has made me realize that "Human powered" power generation is too narrow a scope for this discussion, so I'm starting a new thread.

Let's hear ideas about alternative sources of power for radios: we might be unable to find steam-driven units ;-) but there's always more that one way to skin a cat.

I'll ask that some methods be omitted, for the reasons shown:

1. Portable generators - too expensive, and they can't go on airplanes.
2. Solar - can't rely on sunlight, especially after a weather-related incident.

There are probably designs for power generation in undeveloped areas, so let's see pointers to that kind of info along with the "Store bought" machines.

Bill

Phil and Steve, I will agree to the above on TIRING. As a 2-stripe 21-year-old of modest upper-body strength Signalman in the early 1950s, I was picked by SFC Don Ross (Maintenance NCOIC at station ADA) to operate a very standard WW2 relic portable AN/GRC-9 hand-cranked generator (Ross worked the radio...RHIP). The "Angry-9" seems to be one of the favorites of old military radio collectors.

On receive I could crank for about 20 minutes at a time and become only weary in the arms and shoulders. The so-called "seat" on the tripod mounting was most uncomfortable although the crank handle axis was about right for distance when seated on the dismantleable tripod mount. The GRC-9 had a double-handled crank so both arms were used.

On transmit it was a whole different story. Five minutes of cranking with key-down had the arms and shoulders aching and ready to give up. Note: Ross had to fiddle with the Angry-9 PA tuning (in the old style) to get a reasonable match with a throw-up wire antenna...hence the long key-down time. Short transmit sequences were okay, but any prolonged key-down was an arm-shoulder killer. Attempts at voice modulation were a bit worse on me although it was hard to tell by that time...the whole upper body was getting pooped.

The Angry-9 could probably put out a modest 30 W RF if all the controls were set just right. The average male cranker could barely keep up with that on transmit. One needed to

be a body-builder type to play power supply. I tried
a modification by wrapping the crank handles with industrial
rags (for damage protection) and, using a tall metal chair,
could crank it by leg power for an hour-plus and much less
fatigue. "Not standard operating procedure!" said higher-
ups..."that's not the way 'we' do it!" Just the same, using
leg power was much better. That radio set was designed in
a hurry during WW2 and, I would guess, by those who would
never operate it in the field and approved by those who
hadn't done much physical labor in their last dozen-plus
years of career. However, historical data will imply that
arm-power was "okay" and those who came later will assume
that it was "approved" because "it was done that way."
The human body has much more strength and endurance in the
legs than in the arms.

Way back when car generators were true generators, we built a tower, put a drone target propeller on a generator, put three car batteries with a standard controller and used it to power our huge vacuum tube radio receiver in Veracruz, Mexico.

We could pick up Del-Rio, and that's about it. Certainly not enough juice to power a transmitter.

But think wind power and batteries to accumulate enough energy to maybe work for a while.

Until a Sterling engine can be built cheap enough to pack it into the field then use a campfire for power.... I'm voting for the Sterling as a future source in that it can use reflected solar onto a pinpoint external

combustion device, as well as a fire, a candle, a kerosene lamp, gasoline, a torch, an LP tank and nozzle... very, very versatile.

Most likely not; legislators rarely consult with people familiar with
the areas in which they legislate, unless they've received sufficient
campaign donations.

There are a number of bills pending before the Minnesota legislature
intended to regulate the use of cellphones and the like in automobiles;
one, if passed and enforced as written, would completely outlaw use of
all radios of any kind in automobiles, under any circumstances.

To a certain extent, yes. But they also had lots of dry
batteries to power the radio. Only when the batteries
were gone did they turn to the hand cranked generator.

Their transmitter output was about 6 watts, and the receiver
was a National NC-173. Yet they managed long-distance
communication, even with the antipodes.

The two radio operators, Torstein Raaby and Knut Haugland, were
skilled and experienced operators
and technicians, having both been in underground
units during the war. Their stories are interesting in
their own right.

Sterling engines have been developed to use in small home power plants. These plants generate heat and electricity at the same time (powered on natural gas) and are very compact. Here in Holland they will in short time be ready for use in normal Dutch homes (which are a lot smaller than american houses....).
When these power plants become widespread, Sterling engines will become much cheaper.

That's great news! The only thing that has kept them off the mass market is
mass production economies. They are great engines. I built one years ago
using a solar dish to focus the sun on a one centimeter diameter on the
transfer cylinder head. Worked like a charm!

My guess is that odd phonetics mostly are used within more local places/countries. F.inst. my call OZ1GB correctly Golf Bravo is often changed to Great Britain or Greenland Boston. The "OZ" is not always used within the country because so far we only utilize one prefix.

The nicknames are also used as alternatives for better perception under difficult conditions.

>Similar legislation (2 bills) pending in the state of Oregon.

The legislation is now dead in Oregon, thankfully.

As originally drafted, they would have prohibited all non-hands-free
two-way communication including those of amateur operators, The
description of the prohibited devices in the proposed bills was done
very inexpertly - some of us felt that it was done by a technically
-focused person trying to cover all the latest developments in digital
messaging used by consumers but who had no working knowledge of
real-world radio communications devices or techniques - and the
proposals gave rise to lots of adverse feelings in the amateur
community.

Our ARRL Section Manager, Bonnie Altus AB7ZC, put together an
ad-hoc task force (including myself) in an effort to ensure that the
bills would be amended to exclude licensed amateur radio operators.
We contacted as many state Senators and Representatives as we could,
and by reports of those who were at the committee hearings, we were
certainly not alone in trying to get all sorts of communications
entities and services included in the exemption list.

It must have been successful, because the Legislative committees
irresponsible dismissed the THREE bills pertaining to that, deciding
instead to rely on existing legislation proscribing driving while
distracted. It makes more sense to deal with the action rather than
the device.

The statutes in NY, NJ, and CT specifically exempt licensed amateur
radio operators from the prohibition. California's statute doesn't
but uses the term "mobile radiotelephones" and by definition, amateur
radio transceivers are not "mobile radiotelephones".

Definitely. In all the existing and proposed legislation, there are
specific exemptions for public safety and emergency personnel.

I know there's a lot of designs to make a 12v supply from a deisel truck alternator and a push lawnmower engine. You might need a couple extra pulleys to get it geared down to where it's comfortable to crank by hand (or foot), but it ought to be possible. The reasons for using a semi alternator are that the 12v regulator is built in and it simplifies things; also these trucks typically idle at about 1/3 the rate of a gasoline engine, they have to maintain voltage at low speed. You can idle down that Toro and run your rig all night on a gallon or two, it would seem like running a receiver, QRP rig, or even 100w for short bursts ought to be possible on a meat powered rig.

Jon,

Thanks for the info: these are good ideas.

I'd like to talk some more about solutions like these: the problem I'm thinking about is the lack of power in the days immediately after a Katrina-type event, where the only sources will be the ones found on every street corner.

There are automobile batteries on every street corner, there are cars, and there are lawnmowers. The question is how they could be combined to provide power for ham rigs: I'd bet that 12v batteries would be the first step, since most ham transceivers run off 12v now, and the batteries could at least be rotated between cars and radio for charging and use, respectively.

The question would be how to charge the batteries without relying on cars, since working vehicles are a valuable asset in themselves and fuel may also be in short supply: I suppose we could devise a "standard" method to hook batteries to working vehicles so they could be carried around while being charged, but that's about it.

That leaves the charging problem. If we can make a "standard" set of plans that allow a team to dismount an auto alternator and connect it to any source of torque, we'd have a lot more flexibility: broken-down cars are always in good supply.

Lawnmower engines interest me because there are only three or four major manufacturers, which means a lot of common parts and so forth. Nobody's looking to mow their lawn right after a hurricane, so it's not a

resource conflict.

I don't want to get too far afield, so I'll leave it that: the idea is to prepare response teams to improvise from local materials, but we need something in between jumper-cables and windmills.

Bill

Just had an interesting conversation on IRC with some DL hams, who mentioned that they haven't signed up for "Logbook of the World" yet because of the hassle. Anybody have an opinion where we should be applying pressure? To the ARRL to come up with an easier way for non-US hams to sign up? For non-US amateur radio organizations to step in as an intermediary?

Rich

I didn't find the ebay auction. But I found this from QRP-L in 1996
(http://www.kkn.net/archives/html/QRP-L/1996-07/msg01007.html):

> Regards
> Dave KI6QE/7 VK2IMJ

Seriously, a 20-50W generator would be very useful for emergency
communications if it could be made light enough. An improvised
repeater placed on a convenient hill or mountain can do a lot of good,
but you'd have to carry it on foot. At a good location, output power
doesn't have to be high. Solar needs to be backed by heavy
batteries. How light could such a generator be made?

And viewed from a different angle: What's the minimum power you'd need
for a cross-band repeater with 5 W output? Would other technologies
than FM repeaters be more useful?

Here in the Netherlands holding and using a cellular phone is prohibited
while
driving a motorvehicle.
So, while at a traffic light: no problem(but beware if teh light turns
green!).
Holding anything BUT a cellular phone(coffee, sandwiches, rasor, mike,
etc.):
again no problem.

No exemptions: just a very simple law (enforced by a $150,- fine).

I have been looking into the utility of "ground batteries" as either a charging source or even a source in itself. This is a source that I haven't considered despite knowing of it's existence for some time. When the ground thaws I'm going to plant some electrodes in front of the house and see what generates....

Another alternator application might be a "low head" turbine. I once saw a television show that included a person who powered his house from the creek running alongside it. Envision a alternator/generator attached to what looks like one of those roof vent turbines. Place it in the creek, and it charges batteries.

> Lawnmower engines interest me because there are only three or four major

Connecting an alternator to a lawnmower engine would be an excellent method of generating power. It is also something that could be rigged in an emergency fairly easily. Mount the engine on top of a box, couple the alternator and driveshaft, wire in the regulator and battery, and there ya go.

> I don't want to get too far afield, so I'll leave it that: the idea is

Bill, I don't know if you remember the program on Discovery channel where teams of people were let loose in a junkyard with a task of building some sort of contraption from materials they had to scrounge within the yard.

Imagine the fun of setting groups of hams down with instructions that they would have to put together a power source and power their radios

from non standard materials. First group on the air wins - or some other criteria of course - Power, reliability, etc.

The sure-fire method I use is to use a dual-band HT and go over to the
2-meter input side and ID once every ten minutes. Thus all frequencies
are covered for ID.

Doesn't an ID originating on the 70-cm link end up being
transmitted on *both* frequencies? Am I missing something?

As a result of this discussion, I looked up DIY fuel cells yesterday
and concluded that they are still impractically expensive. Is it because
of the precious metals content? Are there any similar DIY power
sources that amateurs could develop for emergency/disaster use?

I agree these classic radios are great value.

Learning how to tune and use the radio only takes
a little reading of the manuals and is fun too.
I just remember Drive, Plate and Load.

Big plus, we can work on these radios because the
parts are easily replaced with modern parts.

I get a kick out of the owner manual,

3 tubes, 17 fet, 47 transistors and 84 diodes !

And that GREAT Kenwood audio.

Not on the 70-cm side coming OUT of the mobile radio. That's why you
come in on the 2 meter input.

I thought the point of cross-band repeat was that input and output
frequencies are so far apart that you don't need cavity filters.
Which is why you can do it in a simple transceiver. If true, what you
send to it on one band only gets transmitted on the other
band. Correct me if I'm wrong.

Rich,

I don't see the ARRL relinquishing control of LOTW so I don't believe you'll see any "intermediaries" coming into play. LOTW is a bit of a pain. The process is clunky but it works. There is a need for good security. There has to be a way to ensure that each fellow uploading information is who he says he is.

I was slow to come on board but the process costs less than mailing QSLs.

What particular parts in the sign up process do they consider to be a
hassle? That would be the place to start in attempting to come up
with a solution.

I live in a rural area where quite a number of folks have free natural
gas through leases of wells to Columbia Gas. It is quite inexpensive
to convert a gasoline generator for natural gas (or even propane)
use. There is an outfit near Summersville, West Virginia which sells
a kit of all things needed for as little as $80, including a six inch
pancake regulator. I use a Craftsman/Generac unit capable of 4,000
watts. It is capable of not only providing power for the radio gear,
but it means that we have running (well) water, power for the gas
furnace controls/blower, lights and refrigeration.

For local ARES work, I depend upon mobile and handheld equipment.

The fact is that the cutesy phonetics don't always get the job done.
I remember a domestic SSB Sweepstakes contest where I was having a
great deal of trouble copying one particular weak station through the
75m QRM/QRN.
```

He'd given his call several times. It finally dawned on me that he was saying, "Whiskey Delta Zero Loving Very Nicely".

https://p1k.arrl.org/lotw/docreq shows the procedure. US hams can request a postcard by email/upload and that's it. DX hams have to copy their license and another piece of government ID and send this by international physical mail to Newington. Doesn't sound like much, but copying and mailing documents isn't necessarily cheap or easy, and I suspect that not everybody still has a physical copy of the license. It sure seems like other IARU societies could be deputized to send out local postcards without breaching security, or the ARRL could get trustable copies of the license information. NOthing is likely to work everywhere (some of the societies are very small and have limited resources, I'm sure not every government makes trustable copies of the databases available) but just getting some of the bigger ones would be progress.

Not wishing to belittle your vast experiance and professional abilities, I
believe it is better to be an amateur because the difference, in my opinion,
is that a professional must do what they have to do while following the
rules, while an amateur has the freedom to do whatever he/she likes while
keeping within the rules.

You are not wrong. But assume that the crossband repeater is just sitting there listening on 2 meters and re-transmitting what it hears on 70 cm. The owner is just listening, not transmitting. But the crossband repeater (the mobile rig) IS transmitting on 70 cm because it's functioning as a repeater; what it hears on 2 meters it transmits on 70 cm.

Where's the id for the 70 cm transmission?

The person who is transmitting on 2 meters is id'ing those transmissions, but that id does not apply to the 70 cm RF from the crossband rig.

I see a way around this for the scenario I originally mentioned, but I do not know if the crossband rigs can be configured this way. In that scenario, there is a person using an HT who can hear the 2-meter repeater but cannot get into it with the HT. In this case, the 70 cm transmissions from the crossband repeat rig are not needed; the HT user can simply listen to the 2-meter repeater. What is needed is the repeat from 70 cm to 2 meters. In other words, the HT user listens on 2 meters and transmits on 70 cm; the crossband rig is just there to listen on 70 cm and retransmit that signal on 2 meters. I guess you could say simplex instead of duplex.

Maybe this is a common way of using crossband repeat?

Depends on the job that needs doing.

If you're trying to get your call through during a hectic contest or
when conditions are poor, cutesy phonetics are not appropriate.

If you're just having a good time and conditions aren't an issue then
cutesy phonetics can provide a pleasant chuckle.

Different tools for different jobs . . .

http://www.evconvert.com/article/free-ev-energy
http://www.otherpower.com/otherpower_links.html

This was from a Google search for '"human powered" alternator pedal'.

Some really good info came up:

1. Alternators are only about 30% efficient (URL 2), so
permanent magnet DC motors would be a better choice for
long-term use. However, alternators are more easily
available and I'd like to keep them as an option.
2. There are a lot of designs for using an unmodified
bicycle to spin a generator. These are good because
any source of torque would work as well.
3. There are two types of info: practical plans, often
made for use in developing countries, and store-bought
gadgets that cost more than my FT-890. I've included both
types, but you'll have to dig a bit to get to the good stuff.

HTH. YMMV (pun intended).

<ob.disclaimer: I'm not affiliated with, and don't know any of the
people or companies mentioned in these web pages. Nobody paid me to
reprint these URLs here, and I get no money or commission or anything
else from anything you buy. If you fry your nads trying to build one,
poison the environment for a thousand years, or lose your
fingers/hands/whatever, don't blame me. Use at your own risk. Don't try

> Norman, ZS2RI

I think that neither is "better" than the other. Experience as
a professional may or may not transfer well to amateur,
and vice versa, for a number of reasons:

1) Professionals often do not have to pay for their equipment,
training or other expenses. When they do,
it's an expense of doing business. Amateurs almost
always have to pay for everything out of their own
pockets.That difference in resources makes a lot of difference in
practice. A lot of things that are standard
practice in, say, military radio are simply not affordable
for most amateurs.

2) There are big differences in the time, space and
other resources available to professionals vs. amateurs.

3) There is always a "command structure" in place for
professionals. It may be in the form of a company
organization chart, or a military chain of command, or
simply keeping the customer satisfied. Amateurs have
a completely different situation.

4) Professionals are paid, amateurs are volunteers, which
means they need to be managed in different ways.

5) Most of all, when it comes to something like radio, the goals are usually completely different. To the professional, radio is a means to an end. To the amateur, radio is an end in itself.

IMHO, the whole thing becomes an apples-and-oranges comparison.

Gentlemen,

It appears some background is in order: once you know the history of my brother's ham radio involvement, this will make a lot more sense.

In the 1970's, when my brother was the Resident Host of the Friends center in San Francisco, he went to an estate sale being held on behalf of a Silent Key. He purchased, for _incredibly_ short money, a Drake TR-4, AC-4, RV-4, and MS-4.

At the time, he was not a ham operator, and so his dear brother, who had held a ham license since he was Fourteen, naturally assumed that the aforementioned equipment would, in the natural course of events, make its way to the East coast and into the loving and grateful arms of the aforementioned sibling, who was struggling to stay on the air with very ugly Motorola Twin-V units modified for two meters.

Said sibling, being innocent and trusting, did not see the need to lobby for the natural course of events to take place: after all, what was his brother going to do with the radio except listen to W1AW's code practice? A quiet word in the right quarter, that was all that happened, and the sibling sat back and dreamed of the soon-to-be-state-of-the-art ham shack he would enjoy in short order. He was, in short order, disappointed.

The State of California intervened: it seemed that the executor of the estate had sold a lot of things for incredibly short money, not just the

ham radio gear, and the state chose to disqualify said executor and request all involved to return the goodies for a refund. My brother, being that kind of a guy, even though he was legally in possession of the Drake-station-of-my-dreams and did not have to do anything, chose to accept the state's offer and take a refund. The equipment was promptly on its way to South America for use by the religious organization which was the primary beneficiary of the estate.

Which left me cursing Ghod and the fates and the State of California and my brother, not necessarily in that order.

But, I got over it, sort of, after a very, very, very long time. I made it a point to ask my brother how his Drake station was doing at various family gatherings during the ensuing years - although not at his wedding, even though I was tempted and had flown cross-country twice in twenty-four hours to attend it - but certainly at other times.

Time, as they say, heals all wounds. Thanks to the Internet and Ebay and rec.radio.amateur.boatanchors, I now have a VERY nice TR-4, and a VERY nice RV-4, and a VERY nice MS-4 with a VERY nice AC-4 inside it. They say anything that doesn't cause a cerebral hemorrhage makes you stronger, and they're right, but I'm wondering at this moment if I didn't suffer one after all, because I've had occasions of insanity which could not be explained any other way - such as the time I promised my VERY nice TR-4 etc. to my brother if he ever obtained a ham license.

Let's hear some _really_ imaginative ideas here, folks. I want whatever small amount of payback I can get.

Hi all,

I have the (incredible fast and reliable) Verizon fiber optic into the house for my internet connection. So far so good. However at the access point there is a battery backup unit for the fiber->Copper converter. This battery unit is kept charged by a powersupply that makes an ENOURMOUS amount of RFI that radiates onto the (15 feet) lead into the unit and from there into the shack. (S6)

Does anybody have any suggestions on how to silence this? Or... a suggestion for a cheap and 'quiet' powersupply? (It's output is a regular 12v)

You could likely find a linear (old-fashioned 60Hz transformer)
"wall-wart" power supply at Radio Shack (and the appropriate
connector/adapter to fit your equipment).

I have FIOS in my neighborhood, but haven't signed up yet.
I'm going to give up waiting for the WiMax broadband wireless
network service and just go with FIOS.

Sorry, Rich, but in this case I have to side with the "let's keep
this the HUMAN side of the contact" idea.

To me, the real reward of the QSO, other than having made a new
acquaintence, is that card that I know was actually in his/her hands
(big DXpeditions and QSL-managed stations aside...)

Sure would be nice if the League made a one time mailing to ALL
existing licensee with a "State Of The Amateur Service" along with
some invitation to get active again but WITHOUT the "...and while
you're at it, send us $40..." part. THAT might get more folks back on
the air AND impress them enough to join up.

I don't get it, Rich. I don't know of any administration that
DOESN'T issue some sort of hardcopy document for a license. Mine's
both on the wall and in my pocket, and both are points of pride.

Unless you're using the one working copier in Mogadishu chances
are the copy price isn't more than the equivilent of $1, and another
$1-3 to mail it, depending on the method...So...A one time expense of
less than $5.00...Tell me what DX station can't afford this and I'll
spot them the fin!

You could try ferrite beads on the wires. YMMV.

Or just bitch to Verizon.

Seems to me that their power supply is interfering with a licensed
service, and that it's Verizon's problem to solve. In addition, if
you do anything to their hardware, however well-intentioned and
skillful you are, you're giving them an excuse to blame any of your
future problems on you.

At least they *have* a battery backup for their FIOS.

Hi everyone:

FWIW....I'm known as the following (Mostly because nothing else seemed to make sense).

Kilo (Or Kilowatt) Bravo ZERO Obnoxious Xray Device (Or KB0OXD, my current call).

For my old call, which I changed in an attempt to try to land KB0PAT or KB0PDC (The latter being my initials) when the N0 calls ran out and the KB0 were rapidly approaching the KB0P** region, I was known as the following (Again becaise it was the only thing that seemed to make any amount of sense).

November ZERO Slimey Milli Watt (Or N0SMW, which was my original call when I was first licensed).

Credit BTW goes to O.J., K0OJ for coming up with both of those.

That's my story. :D

Cheers & 73 :D

Well, note I said "not everybody still has", not "ever had". Some
people take pride just in the fact of having the license, or in the
accomplishments they've made after getting it, rather than in the
piece of paper; not to mention the possibility of simply losing it
over time. "It's in the house -- somewhere!"

The hassle is probably much more of a barrier than the monetary
cost, for sure.

What we have here is your opinion of what might be a reasonable effort
for someone else to make, versus the opinions I heard from people who
would actually have to make the effort; I find the second more
convincing.

[from <1172690401.285397.218080@s48g2000cws.googlegroups.com>]
> To me, the real reward of the QSO, other than having made a new

Opinions do differ. Some people don't care much about QSLs at all;
this is a pretty common (not universal!) attitude among
contesters. LOTW would never be a satisfactory substitute for people
like you who love the physical QSL, but it does have the ability to
make one sizeable group -- award chasers -- happy while reducing the
overall hassle for another sizeable group -- contesters and to some extent

DXpeditioners.

>1) Professionals often do not have to pay for their equipment,
>training or other expenses.

Not a universal truism. The state-of-the-art in ALL
electronics ("radio" is a subset of that) keeps changing
and the professionals have to keep up by constant study
and information input lest they become non-professional
(as in very unpaid). College-University training of
the 1980s and before (especially before) cannot prepare
anyone for anything but the basics of electronics.

>When they do, it's an expense of doing business.

Not a universal truism. "Business" is not always
obliging in making a profit sufficient to allow
perquisites of paid-for continuing education for
those below the CEOs and their staff.

>Amateurs almost
>always have to pay for everything out of their own
>pockets.
```

Of course. That is why the FCC defines "amateur
radio" as not having a pecuniary interest. :-)

On the other hand, the USA has a number of amateur
radio products and services businesses who depend
very much on their "pecuniary interst" to survive,
keep eating, and have shelter and clothing.

>That difference in resources makes a lot of difference in
>practice.

Perhaps. On the other hand, there seems to be a
sizeable market for amateur radio equipment that
can easily reach multiple thousands of dollars in
value for each amateur station. See any issue of
QST or CQ for ads and pictures of "ham shacks"
within them...

>A lot of things that are standard
>practice in, say, military radio are simply not affordable
>for most amateurs.

The military have the very basic requirement of
defending their country...with their lives, if
necessary. I don't know of ANY nation which
requires the Ultimate Sacrifice for amateur radio.

Military radio equipment is required to work over
extremes of environmental conditions that would
disable consumer-market radios...even "high-end"
commercial amateur radio equipment.

>2) There are big differences in the time, space and
>other resources available to professionals vs. amateurs.

Yes, if the professionals work for Fortune 500
companies in regards to monetary budgets. To
attempt doing the same in the average small
business is financial folly. :-)

As to "space and resources," professional-
commercial radio equipment MUST operate on
different spectrum space, MUST use reliable
modes to preform services, yet be WITHIN
very finite budget constraints. [been there,
got the cheap T-shirt...:-)]

Is there a real difference on radio operation
from say, a USN destroyer radio room versus a
private sailing vessel? Yes, the sailboat
cabin is generally more comfortable. :-)

Is there much difference between a Taxicab
mid-[business]-band two-way radio operation
mobile at work with an amateur radio mobile

2m transceiver operation while going to work?
Yes, the private vehicle is generally more
comfortable and the amateur is not stuck on
just one or a few channels as in the taxi.

>3) There is always a "command structure" in place for
>professionals. It may be in the form of a company
>organization chart, or a military chain of command, or
>simply keeping the customer satisfied.

Yes, professionals have to stay within the
"command structure" or find themselves no
longer employed (therefore NON-professionals).
On the other hand, radio amateurs with spouses
and/or family are in the SAME personal "command
structure" as any professional with personal
spouse and/or family.

"Simply keeping the customer satisfied" is NOT
so "simple." Having done that too, I have to
express some disagreement with that rather
flippant remark.

Military radio might be classified as being in
an entirely different universe as to its "chain
of command." In the USA the Department of
Defense regulates military radio use (with
some support of the NTIA) and is not obligated
to directly obey regulations put forth by the
FCC. Contrary to what some have said elsewhere,
MARS is directed by the US DoD; MARS accepts the
volunteer efforts of US radio amateurs but does
not operate within US amateur radio bands nor
does it use similar protocols in communications.

> Amateurs have
>a completely different situation.

Yes and no. Regardless of the human legislatures'
law, ALL elecrons, fields, and waves operate
according to laws of physics. That means that
the technology of ALL radio, "amateur" included
have a very common bond of functioning. USE is
different but then such use is also different
between differing commercial-professional radio
services in the USA.

>4) Professionals are paid, amateurs are volunteers, which
>means they need to be managed in different ways.

In the USA the FCC regulates BOTH civil professional
radio AND amateur and personal radio services. The
FCC also licenses both amateur and professional

radio operators where a professional radio service
requires operator licensing. The difference in
operator licensing is small...COLEMs perform exams
for professional operator licenses and VECs do that
for amateur radio licenses. The FCC can test both
as it wishes...and is the final arbiter on that.

>5) Most of all, when it comes to something like radio, the
>goals are usually completely different. To the professional, radio is
>a means to an end. To the amateur, radio is an end in itself.

Yes and no. A large number of professionals in
electronics (and radio) that I have worked with
are very satisfied to remain as pros without ever
obtaining any amateur radio license or even
operating any radio (except a cell or cordless
telephone) their whole life. To the few people
I've met in high positions of professional
activities, business is an "end in itself."

On the other hand, I've met a large number of
radio amateurs who have other, non-radio, even non-
electronic hobby interests OTHER than amateur radio.

>IMHO, the whole thing becomes an apples-and-oranges
>comparison.

Both apples and oranges are fruit of trees. They
differ only in shape, texture, color, taste, and
digestibility. Humans have cross-bred both for new
varieties suitable for human consumption. Neither
one nor their varieties grow or ripen by laws of
physics but rather by natural laws of chemistry.

"Radio" has evolved greatly in its 111-year life as
a medium of communication. Evolution has happened
through a combination of technological arts, human
use, and various legislations on that use. In my
opinion there is very little comparison between the
"radio" of today and that of "radio" of 70 years
ago. Trying to freeze evolution in midway of its
evolution, holding absolutely to human-derived
protocols and standards of that mid-point is a real
danger to that evolutionary process.

Obviously, others disagree with that opinion. So
be it.

> > license class,

This is not exactly correct.

FCC records still distinguish between Technician and
Technician Plus. When a Technician Plus is renewed as
a Technician, the "former license class" says "Technician
Plus".

> > and as of 2/23/07 there is no distinction in privileges
> > or any other practical difference between it and plain old "Tech".

There's no distinction in privileges, and in a few years there
won't be any difference in name, either.

> >A Tech is a Tech is a Tech.

> Wasn't the point of Jim's segregation of those numbers to show the
> distinction between coded and non-coded licensees, Hans?

No, it wasn't.

When FCC stopped issuing new Tech Pluses, and began renewing all
existing Tech Pluses as Techs back on
April 15, 2000, it was no longer correct to say that
all Techs weren't code tested. So that wasn't why I listed
them separately as well as combined.

I listed Techs and Tech Pluses separately because:

- that's how FCC lists them in the database
- it documents the numerical decline of the Tech Plus as a separate
license class due to renewal, upgrading and attrition
- at some point, the number of Tech Pluses will drop to zero,
and listing them separately shows that event approaching.

The main reasons I have posted, and will continue to post,
the ARS License Numbers is so that interested folks can

watch the trends, and so there will be a consistent record
available to all with Usenet access, for as long as those posts are
archived.

I'm not sure if anyone answered Norman's question or not, so I'll
take a stab at it.

Norman, I suspect that you will find yourself perfectly happy as an
amateur, and would suggest that you go for your license. You will not only
be able to operate - and be in fsmilisr territory - but you will also have
the ability to build and modify equipment, antennas and a lot of other
freedoms as an amateur. Your experience may also come in very handy if you
are interested in emergency comms.

Looking forward to hearning you announce your licensing here some
day. 8^)

Even in places like Sierra Leone, it is possible to find a street
corner stand with a copy machine. If the object is being able to
participate in the LOTW program, what real barrier is presented by
having to photocopy a couple of documents and mail them?

> What we have here is your opinion of what might be a reasonable effort

I disagree with you, Rich. If there are DX station who find it too
much trouble to participate in LOTW, let them be non-participants.
Either they want to participate or not. Copying and mailing documents

aren't the real difficulty of using LOTW.

Again, I disagree. Many contesters are also DXers. They understand
that the other guy is attempting to confirm a QSL for awards credit.
A number of them send out QSLs to every station worked in a contest,
the object being to insure that those stations work the contester the
next time 'round. I don't know of any contester who does not at least
respond to direct or bureau QSLs.

> LOTW would never be a satisfactory substitute for people

There's nothing at all wrong with using both LOTW and direct, paper
QSL cards.
On the other hand, I don't respond to any "QSL's" via E-QSL. Those
confirmations don't count toward many awards and certainly don't count
for DXCC credit.

I'm not familiar with a Rohn model, but I have a Wilson (now US Tower)
pushup 55-footer at my secondary station. Here's a link to their spec
---> http://www.ustower.com/ma-550.html

Not too impressive windload specs, but it's OK for a small beam like a
TA33-jr or similar. I use it to hang a 160M inverted-L. Not sure
I'd want it for my primary tower.

Hi Bill

Been there done that...

Almost 20 years ago Penn Clower W1BG and I built and published
a peddal powered setup to run a 100 W HF rig. I recall the article
in 73 but it might have been Ham Radio. If you really want
I could probably find the date.

Penn used it regularly for exersize, but I recall it being a great effort
to hold a QSO while cranking away. To make it a better workout
it had no electrical energy storage, you had to work as long as you wanted
to talk.

The rig consisted of most of a bike frame, a wheel weighted
to become a flywheel and an alternator with some control electronics.
It probably weighed 50 pounds.

I don't think that is the way to go to rescue your dead cells.
The best way is to monitor the voltage and stop before
you fully dischare the pack. If you migrate to Lithum cells
this is much more important as an over dischared cell is a serious
fire hazzard.

If you just want to top up a reversed charged cell, you might
try adapting one of the crank powered radios.. Just remember
they run on less than 1 W.

Even better just buy the 12 V mobile charger for your HT battery.
12 V lead acid batteries are more tolerant of over discharge
and are usually around...

FWIW as a member of the Deadalus team we had ~300 W available for
a 6 hour planned flight. Our pilot athletes were world class bike racers.
Somewhat conserative data on power available vs time is available
in Wilson's book Bicycling Science.

> future problems on you.

I'm afraid I have to respectfully disagree Mike.

While it's EASY to blame Verizon and accuse them of interfering with a licensed service, you're forgetting one thing. Their technicians, just like that of any major broadband provider (Be it Verizon, Time-Warner, Comcast, QWORST, etc),.ARE NOT trained to handle Ham Radio Operators as customers nor are they trained to customize the installation so it doesn't interfere with Amateur Radio. They are only required to troubleshoot (Or at least attempt to) problems with the equipment and/or anything it's connected to. If no problems exist within the equipment or anything it's connected to, then the problem(s) lie with the Ham station itself.

That can only be corrected by the Ham.

Richard....Did you do a full diagnostic on your station to see if the problem might somehow be in your Ham equipment that might be receiving excessive amounts of RF, thus causing the problem?

> At least they *have* a battery backup for their FIOS.

This may be true Mike, but as I said IF the problem is not with the provider's equipment and/or anything it's connected to, then Richard is the

one with the problem and only he can solve it. Verizon can't do a thing about problems with his Ham station because, again assuming there are no problems with Verizon's equipment or anything it's connected to, they're not responsible.

Just my $.02 worth :D

Cheers & 73 :D

OK, I will try this one more time.

KB9X is running a crossband repeat. It is listening on two meters, and retransmitting everything it hears on 70 cm. KB9X is not a part of any QSO. He is not giving any id. He might, in fact, be asleep.

W9ABC is transmitting on two meters. KB9X's crossband rig hears W9ABC and retransmits that signal on 70 cm.

Where is the id for the 70 cm signal? It needs to be id'ed with a call of KB9X (because it is KB9X's transmitter that is creating it) but KB9X is asleep.

Under what circumstances does a German, Canadian or UK ham have to produce a paper copy, and to whom?

>> The hassle is probably much more of a barrier than the monetary
>> cost, for sure.
>
> Even in places like Sierra Leone, it is possible to find a street
> corner stand with a copy machine.

I don't particularly care about the Sierra Leones of the world, people operating from there are generally very highly motivated and one of the main goals is to get the QSLs out. I'm more interested in greasing the skids for a large population of more casual ops, probably in the big developed countries where the welfare state has created a sense of entitlement.

> If the object is being able to
> participate in the LOTW program, what real barrier is presented by
> having to photocopy a couple of documents and mail them?

The barrier of going out, getting photocopies, finding a big-enough envelope, determining and acquiring the right amount of postage. It doesn't sound like much, but the alternative is to not do it at all, which is *way* less work on a relative basis. US hams just have to log on to a web site twice, waiting for a postcard in between. It was worth some amount of organizational effort to make it easy for US hams, why isn't it worth the same to do so for others?

>
> I disagree with you, Rich. If there are DX station who find it too
> much trouble to participate in LOTW, let them be non-participants.

But I *want* them to be participants.

> Either they want to participate or not.

Fallacy of the excluded middle here, they may want to participate but also want to spend the afternoon running a new feed line instead of getting photocopies and standing in line at the post office.

> Copying and mailing documents aren't the real difficulty of using
> LOTW.

But it's the part that's different for non-US hams. Hassling with the certificates and logging software is pretty much the same for everybody.

>>
>> Opinions do differ. Some people don't care much about QSLs at all;
>> this is a pretty common (not universal!) attitude among

> that the other guy is attempting to confirm a QSL for awards credit.
> A number of them send out QSLs to every station worked in a contest,
> the object being to insure that those stations work the contester the
> next time 'round.

Some people QSL 100% just to avoid the hassle of keeping track of QSLs sent and owed, batch processing being less time consuming than individual transactions. This way they can just throw away any incoming QSLs, and do.

As you note, right now contesters pretty much have to do it as part of the game. LOTW has the possiblity of making it easier for the big statiions that pound out a lot of Q's while still rewarding the award chasers for getting on in the contest. We get to keep the fun part and reduce the busywork part, sure seems like a win to me.

>
> There's nothing at all wrong with using both LOTW and direct, paper

Who said there was? Where did this come from?

> On the other hand, I don't respond to any "QSL's" via E-QSL. Those
> confirmations don't count toward many awards and certainly don't count
> for DXCC credit.

I fooled with eQSL for a while (mostly before LOTW got started.) I eventually came to the conclusion it was pointless and gave up.

> Just my $.02 worth :D

"Assuming there's no problem with Verizon's equipment ... ."

Richard wrote explicitly that there *was* something wrong with it --
that "his battery unit is kept charged by a powersupply that makes an
ENOURMOUS amount of RFI that radiates onto the (15 feet) lead into the
unit and from there into the shack. (S6)"

Looks like it's not justifiable to assume that there's no problem with
Verizon's equipment.

Ah, but ... The FCC sends out enforcement letters to folks with noise
generators -- unintentional radiators -- with some frequency. The
ones I've seen have included fence chargers with problems, aquarium
heaters, televisions that were leaking signal, power line transformers
and insulators, and a great many more classes of sources.

If it's Verizon's equipment, then it's Verizon's problem, and a
letter to them -- outlining the problem and suggesting that they do
something to fix it before a letter gets sent to the FCC -- probably
should be sent. And, of course, it is not Richard's equipment, but
Verizon's equipment. While their run-of-the-mill techs may not be
qualified to deal with this, VZ will have some higher-level techs who
are so qualified.

VZ is *required* to not interfere, just as the folks with the aquarium
heater, the folks with the bad fence chargers, the folks with the leaky
TVs, and the folks operating the power transmission system are required
to not interfere. The enforcement letters tell them what will happen if
they continue to interfere, and it's generally pretty pricey.

If the power supply is radiating enough to interfere, then it's also
radiating enough that VZ is required to fix the problem. Whether they
have techs trained to do so isn't germane to the issue; the FCC has in
the past just told the folks responsible for the interference to stop
it. Or else. Period.

Thanks guys!

I'm going to play with some filters and beads. See if that works
first. I agree that it actually is Verizon's problem (and I will
inform them when I can't get it resolved.) but I want to see if I can
avoid the headace of trying to explain them the issue. $5 worth of
filter/beads might not be so badly spend if it works. Oh by the way...
found out that the powersupply is 48V! (my bad!)

Bill:

Your search for a "simple" way to power gear is great. It points out a lot of what is, and what is NOT possible.

Just powering a little 100 watt rig is not a simple thing, when you don't have access to a 120v plug.

Your question points out what a joke electric and hydrogen powered cars are. There are no hydrogen wells and you still have to burn oil to get the electricity you need to power umpteen electric cars. (yes, there are windmills and hydro-generators, but they could not produce a fraction of the power which would be needed if all cars were powered off electric)

Makes one yearn for a true "zero point energy" source ...

In the past I've seen portable, itinerant repeaters ID's by the USERS....ie: "This K4YZ via K4YZ repeater"....There's no law that says the ID HAS to come from the repeater itself as long as it's clearly IDed...If you're only going to be doing this under short term, "emergency" situations, it's completely legal and will save you having to mod a rig..

Some of the Yaesu rigs that I have DO have a "CW IDer" in them, however...Tour the owner's manual.

You hit the head on the nail with the emergency comment Steve. A
crossband repeater isn't a good idea for continuous use. So your method
is appropriate for the appropriate use of that type of repeater.

And on a practical point, Verizon would rather spend the $100 in
labor and $10 in equipment costs to solve the problem to avoid having
their name "flagged" in regulatory enforcement files and have it pop
up when they apply for something really important such as rule
exemptions or rate increases!

If it were me, I would run a good heavy fused lead to my 12V station
battery and leave the charger unplugged and disconnected. That's
something the average installation tech can understand.

Agreed!

> It points out a
> lot of what is, and what is NOT possible.

I'd say it's more about practicality.

btw, the Honda EU1000i generator weighs less
than 30 pounds, is quiet and reportedly well-behaved.
Not inexpensive and you wouldn't want to backpack
one too far, but an off-the-shelf solution.

> Just powering a little 100 watt rig is not a simple thing, when you
> don't have access to a 120v plug.

Perhaps part of the solution is thinking outside the box.
For example, cutting the power to 50 W reduces the
peak power load by half, but only costs 3 dB. Using
more-efficient modes means QRP can do the work
of QRO.
>
> Your question points out what a joke electric and hydrogen powered cars
> are.

I disagree - about electric, anyway.

> There are no hydrogen wells and you still have to burn oil to get
> the electricity you need to power umpteen electric cars.

Until somebody figures out a way to produce, transport and store large
quantities of hydrogen economically, H2 power
will not make any difference.

The main engineering limitation of electric cars is the battery
technology.

Oil is not a major source of electricity in the USA, however.
As of 2005, US electricity was produced from the following
sources:

Coal 49.7%
Nuclear 19.3%
Natural Gas 18.7%
Hydroelectric 6.6%
Petroelum 3.0%
Other (wind, PV, etc.) 2.7%

http://en.wikipedia.org/wiki/Electricity_generation

The current use of wind and other sources can be greatly
expanded.

http://en.wikipedia.org/wiki/Wind_farm

>�(yes, there
> are windmills and hydro-generators, but they could not produce a
> fraction of the power which would be needed if all cars were powered off
> electric)

There is no one easy solution to the problem of
energy supply, but there *are* solutions, whether
it's powering a ham rig or an electric car.

Here's one source:

http://www.tessco.com/products/displayProducts.do?groupId=341&subgroupId=70&search=false&page=2

aka

http://tinyurl.com/36z373

(usual disclaimers apply - I have not done any business
with Tessco, I just found them googling "Rohn telescoping mast". There
are other dealers who may be closer to you.)

Please note that these Rohn masts require guying and are
really only meant for very small beams or wire antennas.
Also, a "50 foot" mast isn't really fifty feet high. Like ladders,
the length given is the sum of all the sections, but the actual
installed height is less because of overlap.

Be sure to consider the total cost of mast, guys, anchors,
base, hardware, etc.

There are also the military surplus sectional (not telescoping)
masts mentioned by K4YZ. All of the ones I've used (FD) require
guying, too. Search eBay on "antenna mast" and
they will come up.

What do you intend to put on the mast?

Wow.. I have FIOS here in Texas and I don't have excessive noise from
it. 48 Volts? That seems strange because it has only a 12V battery
for backup power.

Are we sure that the problem is not the network wires or something
else?

I guess, I'm asking how did we determine that the power supply was the
problem? (Aside from the fact that this is normally the problem..)

Hi Dee,

You might try a call to them. Comcast gets their newgroup feed
through Giganews, and Gnews has had the group for around a week. I think
it might take a while to propagate to the various Camcast locations - but
not exactly sure how that process goes exactly.

Just to be sure, did you refresh your Newsgroup list or check for new
groups?

Give one of those free news servers a try dee. They won't give you a
complete listing of all the threads which are available UNTIL you
register with 'em. Just get a gmail email addy (gmail handles spam
"right out of the box" better than any email I have used) as they send
you your user name and password which you must use to identify to, to
use the server ...

> If this is the case Hans, then I should be able to legally get on HF (When I
> get my radio fixed that is) because I've *NEVER* passed a Morse Code test.

In case you missed it, Pat, the FCC completely eliminated Morse
Code testing for all classes of amateur license back on Feb 23, 2007.

If you have a Technician class license, you now have the same HF
privileges as a Technician Plus, without taking any more tests or
filing any kind of paperwork. If you have a Technician license and
want to upgrade to General, all you need to do is pass the General
written exam (Element 3). If you have a Technician license and want to
upgrade to Extra, all you need to do is pass the General and Extra
written exams (Elements 3 and 4).

The HF privileges of a Technician/Technician Plus license consist of
Morse Code only on parts of 80, 40, 15 and 10 meters, and SSB only on
part of 10 meters. Getting more spectrum, power and modes on HF/MF
requires upgrading to General or Extra, but as previously stated,
those licenses now require only written tests.

Hans' point is that, as of Feb 23, all Technicians and Technician
Pluses
have exactly the same operating privileges and upgrade credits,
whether or not they passed a Morse Code test.
>

Solid state transmitters are notoriously finicky about matching to the antenna. Tube equipment is not, so I am told, and early experience seems to bear that out.

Certainly I can see one of my newer rigs start to fold back at 2:1.

What are the practical limitations of the Tube finals apparent flexibility?

Is it safe to compare the load, plate, and drive controls to some of the functions of a tuner? (possible real dumb question)

As far as I know, Tessco is a distributor, and they don't sell direct to
the public. Perhaps it can be order through Graybar or a similar
electrical supplier may be able to order from them.

I disagree some with that, having entered HF radio comms
QSYing 1- to 15-KW transmitters. Failure to properly
neutralize a final RF amp can result in heating sufficient
to melt the glass envelope enough to let air in and thus
destroy the tube (an 833 that was mounted on the control
console at Army station ADA for weeks as a reminder).

> Certainly I can see one of my newer rigs start to fold back at 2:1.

That's a somewhat arbitrary level that is designed into
most solid-state PAs. One can run them without the
VSWR sensing but it isn't a good idea.

For one thing, RF power transistors are expensive and
replacement is not the relatively easy task of just
unplugging the old tube and plugging in the new one.
It's a mechanical task and one has to remember to
properly heat-couple the new PA transistor...the amount
of waste heat is concentrated in a much smaller space
than big tube envelopes-bases.

> What are the practical limitations of the Tube finals apparent
> flexibility?

That's in many decades of old literature and covered
extensively. Data from commercial service transmitters
is more comprehensive than amateur types as a
general rule. Some of that may be hard to get now.

> Is it safe to compare the load, plate, and drive controls to some of the
> functions of a tuner? (possible real dumb question)

Not dumb, it's more like comparing potatoes and peas.

The long-common tube tuning controls are directly
connected to variable, relatively narrow-band tuning
and impedance-matching passive circuits. The tube
plate source impedance is relatively high compared
to the antenna feedline, even if that feedline is 600
Ohms balanced. The common pi-network is both
a resonating network and an impedance-changing
circuit.

An antenna tuner is very simlar to a tube pi-network
but operates either to change (narrowband) impedances
up or down relative to the feedline characteristic
impedance. Again, passive components do the work
of transformation.

By contrast, most of the solid-state power amplifiers
are broadband, much more so than common tube
circuits. Since their input-output impedances are
relatively low and known (and predictable) over a wide
frequency range, they can use broadband transformers
for matching. The end result in the design is one
without many of the tube controls' necessity.

Usually, but not always, either type of amplifier is
still suceptible to damage from mismatching load
impedances. The mismatching just takes on a
slightly different form between the two.

IMHO, it's really a matter of the actual circumstances. As far
back as the late 1950s there were hollow-state ham rigs made
that were meant for 50 ohm loads only. In fact, there
were some HF tube ham rigs made that required no conventional tuneup
at all (CE 100V, 200V, 600L).
>
> Certainly I can see one of my newer rigs start to fold back at 2:1.

Most hollow-state ham rigs can handle 2:1 SWR no problem.
Sometimes there is less tolerance for loads that are highly
reactive, though.

> What are the practical limitations of the Tube finals apparent
> flexibility?

It's really a matter of how the rig was designed.

Many 1950s hollow-state ham rigs were built with pi-networks that
could match a wide variety of loads efficiently. The EF Johnson Viking
2 is a classic example of that type. Many
homebrew designs also had such pi-networks.

The problem is that the components for such a wide-range network tend
to be large, heavy and expensive. So in the late 1950s and early
1960s, rigmakers designed more for compactness than for wide matching
range. Still, the typical
ham rig of those days could usually handle SWR of 2:1 or
less with no problems.
>
> Is it safe to compare the load, plate, and drive controls to some of the
> functions of a tuner? (possible real dumb question)
>
Not a dumb question at all IMHO.

The short answer is "no". Tuning up a hollowstate
ham rig is a similar but not identical to adjusting the
typical tuner.

Some may tell you that all it takes to tune up a tube
transmitter is to "peak the grid and dip the plate", but
that's simply not correct. Tuneup procedures vary
according to rig design and you have to be specific.

Of course once you get the hang of it, the procedure rapidly becomes second nature.

What specific hollowstate rigs are you considering?

> to bear that out.

I don't know if "finicky" is a good term, Mike. "Different" might be the best word to use. Transmitters with vacuum tube finals can match a wider range as a rule, but there is a limit to what they can handle. Some of the older Johnson and Globe/WRL rigs matched a wider range than some of the other brands.

> Certainly I can see one of my newer rigs start to fold back at 2:1.

Most Japanese gear is designed to do just what you're experiencing. That's a form of protection for the final transistors. Ten-Tec does it differently. Ten-Tec rigs do not start to reduce power. They depend upon the supply to fault and trip if too much current is drawn. That's why it is important to use a Ten-Tec supply with them or to use a fast breaker rated to trip near the maximum current draw expected of the transmitter.

> What are the practical limitations of the Tube finals apparent
> flexibility?

That depends entirely upon the design specifications set by the manufacturer.
If the manufacturer's manual says "45-90 ohms", that's the practical limitation.
Some of those old Globe transmitters used to have ranges of up to 1000 or 2000 ohms as I recall. At the other end of the spectrum, Hallicrafters produced some transmitters without even a loading control. These were designed to be used with an antenna presenting something very close to 50 or 75 ohms.

> Is it safe to compare the load, plate, and drive controls to some of the
> functions of a tuner? (possible real dumb question)

Not the "drive" control, but certainly the other controls of a tuner could be considered comparable to the "tune" and "load" controls.

If the only antennas we have are trapped verticals, tribanders or dipoles/inverted vees cut for the band to be used, we might get away with not having to use a tuner at all. Still there are likely to be frequencies significantly removed from the antenna's resonant frequency where one might need a tuner to enable the transmitter to make full power. We aren't likely to need a wide range tuner for those times. A simple T-match will likely enable us to find a

combination of settings which will present a low VSWR to the transmitter. The main alternative is to have a variety of antennas which present a VSWR of under 2:1 to a transmitter.

Most quality built amps will cover 2-30mhz, they only need the proper filters behind 'em to keep 'em clean, and of course, you exciter needs to put out a clean sig.

Motorola has a great circuit using four 250W transistors to get you a kilo. It can be found on the web.

There are scores of tech papers by motorola on 100W to 1K and beyond amps, a little research on the web should discover them.

> according to rig design and you have to be specific.

Sorry, but that was procedure for pre-WW2 high-
power HF transmitters. While it is a simplistic
phrase, it still applies. A more exact procedure
was to tune up the exciter with reduced drive
power and literally peak the grid current. Plate
current was then observed with the plate tuning
adjusted for a slight, but observable dip in plate
current. Of (perhaps) greater importance was setting
the neutralizing control for minimum grid current;
"dipping" the plate current should produce the least
grid current peak on adjusting the plate tuning.

For best results on setting the load-side capacitor
of the common pi-network without a bidirectional
power meter, a detector way out in the field with
meter next to the transmitter is the simplest way
to "tune" that capacitor. However, with about 34+
other high-power transmitters all in the antenna
field, that is impractical; presets for that control
would suffice. The load capacitor of a pi-net has
the least effect on tuning to a new frequency.

When someone does about two QSYs per shift
on at least 15 different transmitters with pi-network
output circuits (all with vacuum tube PAs), yes,
one "gets used to it" but what I described was the
correct phrase.

The pi-network has been around and used in HF
transmitters since at least the late 1930s and has
survived past the start of the semiconductor era.
However, the convenience of broadband transistor
power amplifiers has pretty much tossed that whole
tube tuning procedure. Used with a Bruene detector
sensor for an automatic antenna tuner, it makes
QSYing a snap, even jumping bands (with a broad-
band antenna, of course).

"Peak the grid and dip the plate" is an old correct phrase. It will be found mentioned in the current US amateur radio question pools.

Yes, there are exceptions. I was once involved with a distributed amplifier design that would cover over an octave of spectrum using tubes and was NOT tuned at all in normal operation. Since that one involved over a dozen vacuum tubes (ceramic-metal medium-power types), it would not be suitable for ordinary amateur radio HF transmitter stations. The vertical amplifier of the old Tektronix 54n series oscilloscopes used push-pull tube-type (all glass envelope "receiving" type) distributed vertical deflection amplifier.

The pi-network output circuit was a favorite among amateur homebrewers for decades due to its simplicity and better ability to attenuate harmonics, that coming to be more and more prominent in regulations as HF users became more plentiful.

Probably worth an inquiry to find out.

Here are some other options. All appear to sell to individuals. I
have not dealt with
any of them, though:

Kollman Radio (Kansas)

http://kollmanradio.com/product_info.php?products_id=2730

Henshaws (also Kansas)

http://secure.cartsvr.net/catalogs/catalog.asp?prodid=4925373&showprevnext=1

Burghardt (South Dakota)

http://www.burghardt-amateur.com/Burghardt/HTML/new_product_frames/new_text_frame.html

R&L Electronics (Ohio)

http://www.randl.com/cgi-local/cart/cart.cgi?cart=Search&groupnumber=(7990)&nh=6

Radio Shack used to list a telescoping pole that
was allegedly made for them by Rohn. May be
available on special order.

Due to the cost of shipping, it may be less
expensive to order everything from one supplier,
even if that supplier's prices aren't the lowest.

I enjoy twiddling knobs, kind of the same way I like a manual
transmission. 8^)

> What specific hollowstate rigs are you considering?

Last year at Dayton I purchased a 40 and 80 meter Heathkit single
Bander as a learning tool - they are pretty simple. I restored the

80 meter unit, and will start on the 40 meter one sometime. I am now looking at a Kenwood TS-830S. It's a hybrid, with tube finals. I really like it so far, although I don't see it replacing my IC-761. I am hooked on computer control of the newer rig - sometimes! Other times I just like that retro aspect.

That brings up a related issue. Lots of Hams today are restricted to one antenna, yet they would like all band operation. I think it would be a great idea for a manufacturer to have a transciever that included a tuner right in the rig itself.

That isn't too surprising. The first several months are likely to
be upgrades from people who paid attention to the change in testing.

I suspect the next batch will be Hams that found out about the
change right around now. This group will be upgrading about 6 - 12 months
from the change.

Absolutely new people won't be testing until around a year from
now.

This is all give or take a bit. In our area, we are averaging a
little over 1 per month, even before the change. I consider that good
growth.

They do exist, although being primarily interested in VHF/UHF operation (we only recently had the morse requirement for HF dropped over here in the UK, but that's another topic..!!) I've had little experience of them.

I do remember vividly using a Drake commercial HF transceiver (I think it came out of a ship's radio room) back in the late 80's at a special event station that had this feature, you could operate on any band without any form of tuning at all, although of course how much power would get out on a really bad antenna is debatable ;-)

Of course if you've enough money, there are those antennas that tune themselves. A friend has a 3-element beam that is computer controlled; as you tune across the bands, the elements automatically adjust themselves to the correct length..! I don't recall the make/model, but it is of American origin, does anyone know of it..?

Well you can't tell if that is growth or not unless you are sure that no one
died or let their license lapse. I generally get 2 to 4 brand new licensees
per session but that probably just barely offsets those that are lost.

My main HF rig and my husband's main HF rig both have built in tuners. Both
work pretty well. However they do not have the range of outboard tuners.

A lot of commericial and military equipment have built in tuners with quite
significant tuning ranges. Of course this comes at a price so amateur gear
doesn't have as much range in their tuning capacity on the built in tuners.

I think you mean the Heath HW-12 and HW-22, or the later
A models of the same rigs.

They are from the early-to-mid 1960s, and have very limited
matching range. They are really only meant to match a 50
ohm load. Note that there isn't even a LOADING control on
them.

The Single Banders were Heath's answer to the "SSB is too
expensive" idea. Every possible simplification and economy
measure was used in them, yet the result is a usable 100 W
class SSB transceiver for one HF ham band. Note that the
75 meter one stops at 3.8 MHz. Heath figured that by
simplifying the output pi network to the most extreme degree,
they could save a few dollars. Coming up with a 50 ohm
antenna was the ham's problem.

> I am now
> looking at a Kenwood TS-830S. It's a hybrid, with tube finals. I
> really like it so far, although I don't see it replacing my IC-761.

That's a pretty good rig for its era. The matching range is limited
but it will handle 2:1 SWR without problems IMLE.

> I am hooked on computer control of the newer rig - sometimes! Other
> times I just like that retro aspect.

One of the great things about amateur radio today is that we can
use a wide variety of technologies for the same or similar purposes.

I find it ironic that the evolution of the "state of the art" has come
full circle in about a half-century, at least in HF/MF:

- Ham rigs of the 1950s usually had wide range pi-nets which required
adjustment, but would match almost anything without an external
device.
- Ham rigs of the 1960s and 1970s usually had restricted-range
pi-nets which were easier to adjust, but sometimes required an
external matching device.
- Ham rigs of the 1980s and later usually have solid-state finals and
no adjustment - and usually require an external matching device.

Many rigs offer that as an option. For example, the Elecraft K2 can be
equipped with the optional KAT2 internal automatic antenna tuner. In
my experience, the KAT2 can match at least a 10:1 SWR, if not more. It
doesn't have
manual adjustments, however - it's a form of autotuner.

The 100 watt version of the K2 can be equipped with the
matching external tuner.

One interesting feature of these autotuners is that they
automatically reduce power to a few watts while the tuning routine is
operating.

I don't know of any solidstate HF ham rig with a *manual*
tuner built-in.

Besides old ARRL Handbooks prior to the 1970s, I'd suggest
finding the site that has digitized copies of GE Ham News.
Those were (bi-monthly?) hand-outs by GE to push their
tubes (naturally) but they contained lots of different ham
projects (using tubes, of course).

I found such a site a few years ago but didn't bookmark it.
Was incomplete then but being worked on. The 1960s
was a good peiod for new designs in USA amateur radio.
I used to grab my boss' copies as soon as he was done
with them back then. :-)

IF and only IF they appear on some modern-day surplus
market, look carefully at an AN/PRC-104. That is a manpack
HF radio with an extra box on the side for an automatic
tuner for the whip antenna. It's been in military service
(land forces) for about 20 years now and several companies
are trying to get in with new replacements for it...Harris for
one (if I remember the military news).

Neat little thing, frequency-synthesized, SSB, can be keyed.
Designed and manufactured by Hughes Aircraft Ground
Systems. QRP of course but the military used the same
R/T for higher-power vehicular and fixed HF sets (higher
power antenna tuners, too, in those). All solid-state,
of course. I have the TM on it in PDF in case you were
really interested in that...:-)

Call Verizon and complain to get the problem fixed! The noise also may be interfering with other people (for example, short-wave radio listeners) who, because they don't have technical knowledge like you, wouldn't have a clue what's causing all the noise.

I should have noted large range and balanced/unbalanced output. My
IC-761 has an autotuner on it that works pretty well with my vertical
antenna. The dipole is run with balanced line, and needs a different
tuner.

> A lot of commericial and military equipment have built in tuners with

Size can be an issue too. The IC 761's tuner is a pretty tiny
thing. I had to take an IC 765's autotuner 9 (very similar) apart once to
repair it, and it was around the size of one of the mfj tiny tuners.

A little bigger components, plus a 4:1 balun, and they would have
it.

I have been pretty impressed so far. The receiver seems pretty hot, certainly the sound is *good*. I'm listening to it right now, and it is simply very legible. Tuning is only one speed, and a tad fast. Seems strange just having SSB and CW, but overall I think I'll keep it.

And that is what I'm thinking about with regards to new rigs with an internal tuner that has both balanced and unbalanced capabilities as a natural evolution. There are a lot of Hams that don't have the ability to put up towers and beams, and are looking at a wire antenna for a while. I think its time for that

I have a pretty good track of the hams in our area. In the last
year, we have had ~ 2 SK's. Lapses are a little more difficult, but still
not too many. The local club has grown at around 1 per month. Club growth
probably can't be sustained at that level. But all appearances are that
in this area, we are doing well.

I haven't even held our first session since the rule changes and that
won't occur until March 27. There is some interest around here in
upgrades and none have indicated much urgency until later on anyway, so
it will work out.

As for new hams, we average one every couple of years. Yes, I'm in the
sticks...

A number of amateur transmitters/transceivers have used a quick
peaking of the drive/preselector control followed by adjustment of
tune and load controls for maximum output, keeping readings within
operating parameters. I've never seen an amateur transmitter with a
front panel neutralizing capacitor. Neutralization is normally a set
and forget procedure which one needn't worry about until the final
tubes are replaced.

Tuning for maximum output for a given amount of drive has become the
norm in tuning high power, vacuum tube linear amplifiers. All one
needs do is make certain that the bottles don't aren't drawing too
much grid current. A check of linearity can be made with the station
monitor 'scope.

> The load capacitor of a pi-net has
> the least effect on tuning to a new frequency.

That would depend upon the antenna being used and the amount of
frequency change as well as the type of equipment being used. Some
manufacturers switch in some fixed capacitance on various bands or

portions of bands.

> The pi-network output circuit was a favorite among
> amateur homebrewers for decades due to its
> simplicity and better ability to attenuate harmonics...

...but the Pi-L did a much better job of attenuating harmonics with only a little more circuit complexity. Quite a number of Novice licensees found themselves in receipt of OO notices or letters from the FCC when using a simple pi-net output tank with a multiband antenna.

The 75m transceiver is the HW-12A. It runs 3.8-4.0 MHz. That's all
the phone band there was back when the rig was produced. There's a
mod in one of the mags--CQ, I think--that puts in a fixed silver mica
cap with a little trimmer cap in parallel for making the thing work on
both 3.8-4.0 and 3.7-3.9 MHz at the flip of a mini-toggle switch.
That'd give you a bit more room to roam.

In it's era, the TS-830 was somewhat of a DXer's and contester's dream
machine.
That receiver has an extra filter slot for cascading filters. One can
still buy after market filters for it.

> it.
>
Well, sort of.

The Ancient Ones used antenna matching
devices to feed balanced lines. The Johnson
Matchboxes are one example of a commercial
version. Most Handbooks have examples of
link-coupled balanced wide-range tuners.

The problem was that such link-coupled tuners are large
and not easy to bandswitch.

About 1970, a new idea in tuners appeared: Use an
unbalanced matching network such as a T or L
network with a roller inductor or tapped inductor, with a
balun if balanced output was wanted. 4:1 iron-core toroid
baluns were compact and broadband, the T or L tuner
could be made wide-range without complex bandswitching,
and the whole works seemed an improvement on the old
link-coupled balanced tuner.

The problem was that baluns aren't magic devices. The
system works well if the shack-end of the transmission line
is around 200 ohms impedance and not too reactive. But in
many cases the shack-end impedance with balanced line
is very high or very low, and/or very reactive. Under such
conditions the balun may not do a very good job because it is
being asked to work far outside its design parameters.

Also, if the shack-end impedance is low (say, 12 ohms), the
use of a 4:1 balun will make it so low (3 ohms) that it may be outside
the efficient matching range of the T or L network.

These conditions may be partially remedied by use of a balun
that can be switched to either 4:1 or 1:1 ratio, and by choosing
antenna and feedline combinations that don't result in extreme

values of shack-end impedance/reactance. But that reduces
the flexibility of the system.

The "unbalanced tuner followed by a balun" idea is clearly
one where "newer" wasn't necessarily "better" in all cases.
Yet it became very popular because it usually worked.
But in many cases the balanced line was actually
doing a lot of radiating and there was considerable loss in the
system.

Back in 1990, AG6K came up with an answer to the
shortcomings of that method. He put a 1:1 balun between the
rig and a simple balanced tuner, so the balun only has to
deal with a pure 50 ohm load once the tuner is adjusted.
Although AG6K favors baluns made from coax wound on
PVC pipe, other forms of balun such as ferrite-bead and
wound-toroid can be used if preferred.

You can read AG6K's article here:

http://www.somis.org/bbat.html

and judge for yourself.

AG6K's approach used two ganged roller inductors and
a single variable capacitor, compared to most commercial
manual tuners that use two variable caps and a single variable
inductor. Because there are only two controls, remoting the
tuner is made easier.

I wish that the manufacturers would include the provision for balanced feedline. The random-length dipole, fed with balanced line, is an ideal antenna in many cases. It's especially appropriate for disaster situations (and simulated disasters, like Field Day). Find the two highest supports that are available, as far apart as possible, measure the distance, cut the wire and install the middle insulator and feedline, hoist each end, and you're done. Now you've got a reasonably efficient radiator (especially if there's enough distance between those two supports) that you can use on any band, and the length of the feedline isn't particularly critical. But it takes a tuner and balun to make it work, and if this was included in the rig and was automatic, it would be ideal.

Thanks for the correction Dave. I should have looked at the back of the
unit when I was composing my email

There's a
> mod in one of the mags--CQ, I think--that puts in a fixed silver mica
> cap with a little trimmer cap in parallel for making the thing work on
> both 3.8-4.0 and 3.7-3.9 MHz at the flip of a mini-toggle switch.
> That'd give you a bit more room to roam.

Now there is serendipity for ya! I was trying to align the thing, and
having some trouble with the top end. And the unit had this extra switch
on the front. Since I couldn't find the schematic for the "a" version, I
wasn't sure if that switch was part of th ea version or not. Preliminary
looks made me think that it might have been something to lower the
frequency down to the CW portion of the band. But it looks as if my rig
has that mod .

I can believe that it was very popular. The hybrid concept is
interesting. I especially like that you can turn the tubes off if you
just want to listen.

Well time will tell. When I have occasion to mention ham radio, the
responses tell me that most people don't even know it exists let alone
what the requirements are. Changing the requirements won't change
that.

Thanks for the reminder on BAMA contents. BAMA has more
than just old tube equipment manuals. :-) Good site!

On the general subject of tube PA matching to load, some
remarks:

The automatic antenna tuner might have its beginning at
Collins Radio of the 1950s decade. Reference is the T-195
transmitter, part of a set that used the special version
of the R-390 series called the R-392, designed and built
for the USMC, first fielded in 1955, intended to be Jeep
mounted. The basic whip antenna matching was a servoed
single variable L and a single variable C to a conventional
PA output tank...so-called Ell-network, switchable to
the four possible L-C connection possibilities. On an
Army demo in late 1955, I was most impressed when the
demonstrating officer simply removed half of a whip
section (!), hit the tune function, and the servo
system re-tuned to this new antenna impedance in
seconds. :-)

Warren Bruene must have had a hand in that Autotune
labeled antenna matcher because it has the first instance
I've seen for the "Bruene detector" in the transmission
line to get both amplitude and phase of the RF. Slight
variations of that exist today, generally with a toroid
for current output and a small capacitor for voltage
output, both combined into dual diode detectors. Today's
antenna auto-tuning subsystems use binary-progression
switched single inductors and single capacitors with the
servo system basically a microcontroller plus small

frequency counter (sometimes) that can determine which L or C to switch and remember the frequency and setting. SGC (Stoner Goral Company) in the Puget Sound area of Washington state has at least three models for both maritime and amateur radio HF use. The Big3 (Icom, Yaesu, Kenwood) have them, either built-in or as out-board boxes. Several independent USA companies have them.

ALL (no exceptions) antenna tuners have limits on their impedance matching capabilities, whether "Pi-L" output tanks or big boatanchor style structures that look very impressive. There are few overall advantages in any configuration with the possible exception of Simplicity of the single L, single C variety now common to today's autotuning matchers. ALL, even the popular Pi-network, have limits that can be proven mathematically; if the math doesn't fit, no amount of publicity or historical references will make it fit better.

If you or anyone else would like an algebraic-only math explanation of the four combinations of single L and C matching combinations...with their limits of load impedance variation, I'll be happy to forward them by e-mail attachments. No binary files here and the equations, figures are better shown in the PDF format.

Mike,

If you like the BoatAnchor Manual Archive, you
may be interested in these sites. Lots of
downloadable manuals and data:

First is Pete Millett's book site:

http://www.pmillett.com/tecnical_books_online.htm

Has some incredible stuff, like complete ARRL and
Radio Handbooks, Radiotron Designer's Handbook,
Reference Data for Radio Engineers, and much more.
All in PDF.

CAUTION! Some files are quite large, and will take a long
time to download via dialup. One trick I have used is to set up
a dialup download late at night, hit the button and go to bed.

and tube data, from the RCA HB-3 books:

http://www.pmillett.com/hb-3_tube_manual.htm

arranged by inidvidual tube type, for easy download.

The Glowbugs website has lots of downloadable info:

http://www.mines.uidaho.edu/~glowbugs/index.html

including some good manuals and articles on WW2 military surplus:

http://www.mines.uidaho.edu/~glowbugs/Military__and__Surplus.html

http://www.mines.uidaho.edu/~glowbugs/PDF%20files/

Some of these are quite large, too.

"Bunker of Doom" site with lots of stuff:

http://www.bunkerofdoom.com/

Tube manuals, for example.

Transformer catalogs and other data:

http://www.bunkerofdoom.com/xfm/index.html

Another good site:

http://www.antiqueradioarchives.com/archives_index.htm

If I run across the mod, I'll forward a scan of the information to
you. There was another easy mod which padded the carrier oscillator
frequency in order to roll off some of the annoying high frequency
hiss on receiver, while adding fullness to the transmitted audio. It
had the added benefit of more carrier output for tune up.
Your HW-12A may have that mod as well.

The '830 doesn't get points for being an early hybrid, but it does get
points for having that cascaded filter availability. The early

Hybrids were rigs like the Yaesu FT-101 and variants along with the Kenwood TS-520 and TS-820. Drake used a hybrid design in the T4-XC/R4-C transmitter/receiver pair but there was a mix of tubes/solid state devices in the receiver. The Drake 2-C receiver might have been the earliest hybrid design amateur receiver.

This is not surprising. Amateur radio has already had a "code-free"
license for 15 years. The claims that there was this huge untapped
reservoir of new licensees just waiting for a "code-free HF" license
was never supported by any facts -- just supposition and anecdotal
claims of "deaf PhD EE friends". Why anyone would even think there
would be this huge wave of new applicants is beyond me.

On Mar 4, 7:24 pm, Mike Coslo <mco...@youknow.comcast.net> wrote:

> That isn't too surprising. The first several months are likely to

Frankly, I suspect that 99.9% of the activity generated from this
latest licensing change will be nothing but upgrades.

As I posted on another thread, I predict at the end of the year we
will see a 0 to -1% "growth" in ham radio resulting from these
changes.

> I suspect the next batch will be Hams that found out about the
> change right around now. This group will be upgrading about 6 - 12 months
> from the change.

Given the current state of the theory examinations, I suspect you'll
see an upgrade curve which is steep at first, tapers off, and then
falls rapidly as well, as the pool of people who are interested in
upgrading is exhausted.

Frankly, not everyone is interested in upgrading. My family has
Advanced, General, and Tech-class licensees. None of them have any
intention of upgrading, the last I knew.

> Absolutely new people won't be testing until around a year from
> now.

I'm not quite sure how you formulate this claim. It certainly doesn't
take a year to study to pass an amateur radio examination. People
finding out about the licensing changes now could have a license in-
hand virtually immediately. Certainly within 60 to 90 days.

We've already had a codeless license for 15 years. All we have now are
codeless HF licenses as well. Is there going to be this huge influx of
people who never got licensed as Techs because they couldn't operate

HF? I seriously doubt it.

I'm sure there will be some, but the number will be statistically insignificant.

The AG6K tuner can be used with balanced or unbalanced
line.

All you have to do to use it with an unbalanced line is to ground the
coax shield at the tuner end of the coax balun,
and use the "other side" to feed the ungrounded line. A
simple SPST switch of adequate ratings can do the job.

The AG6K tuner, as described, has adequate matching
range for most dipole-fed-with-balanced-line amateur
antennas. A little care in choosing the antenna and
feedline length can make the tuner's job a lot easier.

Reg Edwards' DIPOLE3 program can be a big help in
figuring out the shack-end impedance of various
antenna/transmission line combinations.

Although not mentioned in the article, the roller inductors
could be replaced by a pair of tapped coils and a double-pole switch.
The tap positions would have to be found by
experiment, but could be made permanent once they were found. Tuner
adjustment could then consist of simply selecting the correct tap
postion with the switch, and
adjusting the variable capacitor for minimum SWR.

Automatic tuners are not new to amateur radio, btw.
An automatic balanced tuner was described in QST for July, 1952. It would automatically retune itself within
an amateur band. Changing bands meant changing coils, but once that was done the tuner would do the rest automatically.

[snip]

I'm not sure a "balanced" tuner is required. I have an off-center-fed dipole I use with 600 ohm ladder line, and I'd like to try it with an Ultimate Transmatch. If I put AG6K's coax balun on the input and isolate the chasis from ground, wouldn't that achieve the same result?

I should have been more clear about the reasons. The tuner that I made is a massively retro unit that is kinda pretty. Cherry finished wood face, with real old time knobs and cranks. If I went to the balanced one now, I'd need to start over again. I will eventually build the AG6K type balanced tuner of course, but want to enjoy this one for a while.

> Reg Edwards' DIPOLE3 program can be a big help in

Depends on the switch, but I would not do that even with
heavy-duty switches. Puts an unnecessary strain on the
rig feeding the tuner.

To be really accurate, such a tuner might best be
called "semi automatic". You had to manually
set it up for each band - it couldn't usually find a
match by blind luck. But once you had the coil and taps
set, it would find a match and follow you up and down the band.

Although the original used a balanced link-coupled tuner, the
principles could be applied to any tuner that meets the
basic concepts.

One modern-day use I can see for such a tuner is for 80/75 meters
with, say, a dipole. You could QSY anywhere in the band and the tuner
would automatically follow.
>
> Thanks for the reference, Jim. It should be interesting to see how they
> did it then.
>
I looked up the articles. Here's how they did it:

The key to the system is the in-line phase detector. It looks a lot
like the sensing element of an SWR bridge, but what
it senses is the power factor (reactance ratio) of the load.
The phase detector has two DC outputs.

If the load is resistive, the two outputs are equal. If the load is
inductive, one output is higher than the other, and if the load is
capacitive the other output is higher.

The DC outputs are fed into a sort of DC differential amplifier
(couple of 6SN7s) which operate a pair of relays.
The relays control a reversible 2 rpm motor that turns the
big splitstator capacitor in the tuner.

If the two outputs are equal, neither relay energizes and the motor
doesn't run. If the load is capacitive, one relay energizes and turns
the motor one way, and if the load is inductive the other relay
energizes and turns the motor the other way.

No operator attention was needed at all once the system was set up.
You didn't have to push a "TUNE" button or anything else - the tuner
would simply do its thing when you transmitted.

In a later article, the same idea was applied to a mobile
installation, retuning the antenna loading coil automatically.
This was long before "screwdriver" antennas!

The whole thing is so simple that at first I wondered why it wasn't
more common back then. The answer is that most rigs of that era had
lots of adjustments, and automating one
of them didn't really save all that much in most cases. Today, with no-

tune rigs, maybe it's worth another look.

Hi. I know nothing about amateur radio nor electronics so I'm here looking for an answer to a question which bothers me. There are a number of places near where I live that, if you drive by them with the AM radio in the car on, there's an extreme amount of noise. It usually last while driving parallel to overhead wires (not high power lines, must the ones on poles), then goes away. It's always the same places and doesn't come or go. I'm guessing bad shielding of the wires. My concern is, if it does this to the radio, is it harmful to people who are near it? Thanks.

Heh, I have, about 20 years after it first came out. That, and
I used to align R-391s...which were much more fun to watch.
ADA had one commercial Collins Autotune transmitter for
about two years, three racks wide, all the Autotune rotary
power came from a single quarter-horsepower reversible
motor. Fastest-reversing motor I'd seen up to 1953.

The short answer is, no.

What you're probably hearing on your AM radio is noise caused by arcing on high voltage lines due to defective or dirty insulators. Your radio receiver is sensitive to this RF because, well, that's what radio receivers do.

But the fact that you can hear it on your receiver does not imply that it is harmful, any more than the fact that you can hear the local AM station means that it's harmful. If you were in close proximity to the AM station's transmitting antenna, you would be receiving exposure to RF [Radio Frequency emissions] in excess of regulated maximums. But I can't imagine a leaky high-voltage line putting out enough RF to be dangerous even in close proximity.

See http://www.fcc.gov/oet/rfsafety/rf-faqs.html for full details.

Yep, Cecil, quite a show!

But the Collins Autotune is really a form of mechanical
memory re-tuning, like the mechanical pushbuttons on
an old-style car radio. A human operator tunes up the ART-13 manually,
locks the settings into one of the Autotune 'memories' then the
Autotune remembers the exact settings of each control and resets them,
when requested.

What the Autotune does not do is to adjust any of the controls to some
electrical parameter in the rig itself - plate current, low SWR,
resonance, etc. It just puts all the knobs back where they were.

Still very impressive, though. And about a decade before the articles
I mentioned.

Like Steve remarked, the noise you hear isn't harmful.

Overhead electric power distribution lines aren't shielded.
With time and exposure their insulators, even the wire
(if covered with insulation) will accumulate semi-conducting
dirt and grime. That can cause minor to major arc-overs
which are short-impluse energy spikes. Since those are
of very short duration their bandwidth is wide and can
spread the impulse energy up into the VHF range of
FM broadcast band.

In newer construction the electric power distribution
lines are underground, generally through metal conduit,
and don't get a change to radiate wideband RF energy
nor are there as many arc-overs.

If the irritation from picked-up noise is a bother, it can
be reported to the local power utility. It's touch and go
whether or not they do anything about it, though. It is
only an irritant to radio listeners and not harmful to any
human...but it is covered by FCC regulations as
"incidental, unintentional RF radiation" and has limits.

First, the levels of emissions are probably about a million times
lower than the standards for human exposure to electromagnetic fields,
so there are no safety concerns. See http://www.arrl.org/rfsafety for
more information on the subject in general.

The problem is generally caused by defective hardware on the poles,
from loose hardware to defective insulators (actually pretty rare.)

The subject is covered in detail at http://www.arrl.org/tis/info/rfi-elec.html,
especially relating to Amateur Radio.

Congratulations on your license, Len.

It is probably best not to mx "unintentional" into that explanation
because under Part 15, "unintentional emitters" are treated
differently than "incidental emitters."

In the US, under Part 15 of the FCC's rules, power lines are
classified as "incidental emitters" -- devices that do not
intentionally generate RF signals inside of them, but that may do so
as an incidental part of their operation. Examples of incidental
emitters are electric motors or the power-line noise sources being
discussed.

Unintentional emitters are devices that do intentionally generate RF
signals internally, but that do not intend to radiate them. Examples
are computers, calculators and most digital devices.

Under the rules, indidental emitters do not have any specific radiated
or conducted emissions limits. The manufacturer of an incidental
emitter has a responsibility to use good engineering practice
(whatever that may be construed to mean) and the operator of the
device must do so in a way that does not cause harmful interference to
licensed radio users.

> regular 12v)

Over the years, I have seen a number of posts that cite strong RFI from various sources. In most cases, where I have obtained a unit and made measurements, the units have complied with the FCC limits.

Most of these devices are switchmode power supplies. In the US, because they intentionally generate signals above 9 kHz internally, they are classified as unintentional emitters and must meet the FCC Part 15 conducteed emissions limits below 30 MHz and the radiated emissions limits above 30 MHz. (The premise is that on HF, small chasses don't radiate much, while the wires they are connected to do.)

Unless they are used as part of a computer system, they are "verified" as described in the Part 15 rules. This means that the manufacturer is required to test them and keep the results on file. Switchmode power supplies used in computers are authorized under a Declaration of Conformity (tested by the manufacturer as verified devices, but only by labs the FCC has approved) or, rarely nowadays, under certification, where the manufacturer sends test data to the FCC, which then authorizes the product.

The manufacturer must meet the limits and authorization requirements; the operator of the device is responsible for harmful interference.

In most of the interference reports I have seen, someone is interfering with themselves. If the device meets the FCC rules, and it is likely that it does, the FCC not, of course, offer much sympathy.

The premise that boxes don't radiate much on HF, but wires do, points to the cure. The easiest thing to try is a common-mode choke on the wires going to and from the box. Below 30 MHz, ferrite beads usually don't have enough inductance to function well as ferrites. You will need to get a toroidal core that is big enough to pass the connector(s) through, and wrap about 10 turns of wire onto it. For

lower HF, -73, -75, -77 or -J material is probably best. For upper HF, I would use -43. The nomenclature of most cores sold to hams has the size in the first part of the part number and the material in the second part. For example, an F-240-43 core has an outer diameter of 2.4 inches and uses -43 material.

That may solve the problem, but with a switch-mode supply, it is likely that differntial-mode noise is also being coupled onto the line. For that, you need a "brute-force" AC-line filter that uses inductors and capacitors. I don't know if is still a good number, but Radio Shack's catalog # 15-1111 is a suitable filter. Others are sold by Industrial Communications Engineers (http://www.iceradioproducts.com/).

You may need a combination of brute-force and common-mode filtering.

Oh, one other point I wanted to make.

Typically, from the house next door, a device that complies with Part 15 will be about S7 on HF. If hams know of devices that are significantly louder than that, I would like to test them. If you can, provide me with a model number and source and/or the unit itself, which I can return to you.

Hello Ed,

On my early-moring runs I've come across more than one pole that was
clearly a noise source. In the damp morning air just before dawn, you
can hear and sometimes see the arcing. PECO is pretty good about
fixing such things
because they often prevent a failure. But simple visual and
audible observations won't find all problems.

One caution: I have occasionally heard hams speak of
finding noise sources by climbing poles, or whacking them
with a sledgehammer to shake the loose hardware.

DON'T DO IT!

Besides being illegal, it's dangerous. And it won't
make utilities any more likely to fix RFI troubles.

Some may ask why the utilities don't just bury
all the wires. Four reasons:

1) The intitial construction cost is higher, as are any
changes in the future.

2) Finding and fixing problems can be a lot harder.

3) The utility has to deal with things like flooding of
underground facilities, people digging up high
voltage lines unintentionally, and rodents.

4) The transmission losses in buried power cables
are higher, meaning more energy is wasted.

I was just reading on the ARRL's website where the FCC has once again declined to include CCNR's (Deed restrictions) in it's "must be accommodating to Ham Radio" rules. I was wondering if anybody knew much about the organization that petitioned the FCC?

I was also wondering if somebody has re-introduced the bill into the new congress that would force the FCC to include CCNRs in it's PRB-1 pre-emption rules? I'm just guessing but it seems that the previous bill that was introduced, got shuttled to committee and died there.

This is important to me because I live in a deed restricted community with a very picky HOA.

Bob,

IANALB, the way it was explained to me is that Congress is very reluctant to intercede in what is, in essence, a contractual matter, and I think that reluctance is justified.

I think homeowners are justified in seeking relief from _government_ regulation of antennas, since such rules are not the sort of thing local governments do well. Deed restrictions, however, are something I think the government should stay out of unless there's a _very_ compelling public interest.

YMMV.

Bill,

I think there *is* a compelling public interest in the anti-antenna
regulations contained in many CC&Rs.

First off, those regulations have become "boilerplate"
in many if not most new construction since the 1970s.
The percentage of "no antenna" homes keeps growing
with time.

Second, deed restrictions and covenants are a form of
self-perpetuating contract that the buyer must accept

or not buy the house, even though the buyer does not
get anything tangible from them.

Third, many of the "no-antennas" clauses are overly
restrictive in that they cover antennas that are not
visible to the neighbors, or are no more visually
intrusive than the utility wires and poles. It is simply
illogical that a nearly invisible wire antenna somehow
ruins the neighborhood, but the multiple poles and wires
for power, cable TV, telephone, etc, do not.

I am not against reasonable regulations, zoning, and codes.
IMHO, many anti-antenna CC&Rs are simply not reasonable.
They are an attempt to get around the limits of government power by
means of private contracts.

Hi,

Some time back, I did some looking around for an Arizona retirement home. In an area with approximately 100k population, I saw exactly 2 real HF stations with a true antenna farm in a week. Both were owned by people whose family had been there before the boom, and were grandfathered. Except for that, I saw a low dipole, a couple of flagpoles which were disguised verticals, and one StepIR vertical standing proudly in someone's back yard. That turned out to be an interesting story, since the residents of the new development had voted not to form a HOA. So while it violated the CC&Rs, there was no organization to enforce it.

Being a place where they prided themselves on being "rustic," they had instituted some very tight zoning on antennas of every sort. However, the real problem, from a ham standpoint, was posed by the HOAs and CC&Rs. They were so standard and pervasive that except for some very old areas, there was no place to buy which did not have them. As a buyer, you had no input to their formulation, and because they are considered private agreements, you had little appeal if you could not get a waiver from the HOA. According to the locals, you basically worked 2 meters, used a stealth antenna, or bought a house out in the county. Way out.

I am all in favor of allowing people to pick an area where the environment is congenial to them. However, when there may as well be a sign on the city limits saying "Hams Not Welcome," even if that is not the intend, it may be time to at least have a vigorous discussion of the formulations of CC&Rs. As for me, I decided to stay were I am, where they consider regulation the last resort, not the first.

Did you previously agree to the restrictions?
If so, it is likely a legally enforceable contract
between you and the other party.

However, a number of years ago the FCC prevented HOA's from restricting the use of outdoor TV antennas and 3' satellite dishes unless the home is in a "historic district" or is on a list of "historic homes." The only restriction I know of otherwise is, as I recall, that the HOA may restricted the antenna's height to no more than 12 feet above the roof line.

Yes, I know some HOA's prevent even the use of a 2 meter "J pole" taped to the inside of the owner's window....

Having not been actively involved in ham radio for several years
(actually, more than a decade) I am amazed to see the same arguments
still going on. This one in particular.

Hams make up approximately 00.2% of the US population. And, decreasing
every year. Why would you be surprised that more and more places don't
want structures they consider unsightly in their neighborhoods.

As has already been stated (and was stated when we argued this more
than a decade ago) CC&R's are contractual matters and you are not
going to see laws to overturn or limit them. If you move into an
area that doesn't allow antennas it was your decision. The argument

that you can't find a place that allows them is bogus. What you
can't find is a place that is willing to operate by your terms.
If you want an antenna farm buy property where that is allowed. If
you want to live in developed neighborhood, then either build one
full of hams or accept that your neighbors don't share your idea
of aesthetics.

Here's what Texas Law says:

"Tex. Loc. Gov't Code Ann. § 250.002 (Vernon 2005)
§ 250.002. REGULATION OF AMATEUR RADIO ANTENNAS.

(a) A municipality or county may not enact or enforce an ordinance or order that does not comply with the ruling of the Federal Communications Commission in "Amateur Radio Preemption, 101 FCC 2nd 952 (1985)" or a regulation related to amateur radio service adopted under 47 C.F.R. Part 97.

(b) If a municipality or county adopts an ordinance or order involving the placement, screening, or height of an amateur radio antenna based on health, safety, or aesthetic conditions, the ordinance or order must:
(1) reasonably accommodate amateur communications; and
(2) represent the minimal practicable regulation to accomplish the municipality's or county's legitimate purpose.

(c) This section does not prohibit a municipality or county from taking any action to protect or preserve a historic, historical, or architectural district that is established by the municipality or county or under state or federal law.

Added by Acts 1999, 76th Leg., ch. 68, § 1, eff. May 10, 1999."

Of course, this doesn't apply to willingly signed personal contracts.

Howard, did you get the email I sent?

229. March 9 2007 License Numbers

Newsgroup: rec.radio.amateur.moderated
Date: 2007-03-10 20:01:47 UTC
From: N2EY@AOL.COM
Message-ID: <1173551042.644998.80300@j27g2000cwj.googlegroups.com>
Source record: 5270

These are the number of current,
unexpired FCC-issued amateur
radio licenses held by individuals
on the stated dates, and the
percentage of the total number
of active licenses that class contains.

Percentages may not add up to exactly
100.0% due to rounding.

These totals do not include licenses
that have expired but are in the grace
period, nor do they include club, military
and other station-only licenses.

Effective April 15, 2000, FCC no longer issued
new Novice, Technician Plus and Advanced
class licenses, so the numbers of those license
classes have declined steadily since then.

Also since April 15, 2000, FCC has renewed all
existing Technician Plus licenses as Technician.
It is therefore informative to consider the totals of
the two classes, since the Technician class
includes a significant number of Technician Plus
licenses renewed as Technician.

On February 23, 2007, the last Morse Code
test element, the 5 wpm receiving test, was
eliminated as a requirement.

The ARS License Numbers:

As of May 14, 2000:

Novice- 49,329 (7.3%)
Technician - 205,394 (30.4%)
Technician Plus - 128,860 (19.1%)
General - 112,677 (16.7%)
Advanced - 99,782 (14.8%)
Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of February 22, 2007:

Novice - 22,896 (3.5%)
Technician - 293,508 (44.8%)
Technician Plus - 30,818 (4.7%)
General - 130,138 (19.9%)
Advanced - 69,050 (10.5%)
Extra - 108,270 (16.5%)

Total Tech/TechPlus - 324,326 (49.5%)

Total all classes - 654,680

As of March 9, 2007:

Novice - 22,725 (3.5%)
Technician - 291,312 (44.5%)
Technician Plus - 30,243 (4.6%)
General - 132,863 (20.3%)
Advanced - 68,837 (10.5%)
Extra - 108,789 (16.6%)

Total Tech/TechPlus - 321,555 (49.1%)

Total all classes - 654,769

Changes:

>From May 14, 2000, to February 22, 2007:

Novice - decrease of 26,433
Technician - increase of 88,114
Technician Plus - decrease of 98,042
General - increase of 17,461
Advanced - decrease of 30,732
Extra - increase of 29,520

Total Tech/TechPlus - decrease of 9,928

Total all classes - decrease of 20,112

>From May 14, 2000, to March 9, 2007:

Novice - decrease of 26,604
Technician - increase of 85,918
Technician Plus - decrease of 98,617
General - increase of 20,816
Advanced - decrease of 30,945
Extra - increase of 30,039

Total Tech/TechPlus - decrease of 12,699

Total all classes - decrease of 20,023

>From February 22, 2007, to March 9, 2007:

Novice - decrease of 171
Technician - decrease of 2,196
Technician Plus - decrease of 575

General - increase of 2,725
Advanced - decrease of 213
Extra - increase of 519

Total Tech/TechPlus - decrease of 2,771

Total all classes - increase of 89

I used to live in a town where the cable company had required builders to attach a 'no-antenna' covenant as a condition of providing service....and the town insisted that builders see that cable service was provided. So it wound up as a covenant, but coerced by the city. Not exactly a level playing field.

It was almost impossible to live in that area without having some restrictive covenants...so it oversimplifies to simply suggest that you can choose to live elsewhere. Most of us have to go where the work is.

Bill KB0RF (now happily living with no covenants and no HOA)

The problem with the website idea is that the information will
only be available as long as the website is active.

By posting to Usenet, the numbers will be generally available as long
as Usenet is archived. I've been posting these numbers twice a month
since 2002 or so, and anybody with internet access can reference the
old numbers by a Google search.

To keep the traffic level down, I'm going to once-a-month
now, and a revised format to show changes relative to May
2000 and February 2007.

Perhaps in the future, I will collect all those old postings
and condense them into one, or a few, postings. Such as
numbers-by-year.

Except it fails to take into account hams who die who's licenses will
remain in the count for as much as 10 years afterwards. And statistics
show ham radio is a very grey hobby and getting greyer all the time.

What you are probably hearing is one of the robot PACTOR stations
or perhaps a rtty station, and yes it is a problem for PSK31 operators

> what are the issues with current computer speeds and tech etc in
> developing software that can foucs on a given mode that are currently
> interested but able to detect and decoded several other (even if less
> well than the focus mode) so you could tell what they are and what
> they just said

There is one program that will identify and shift modes to another
station's mode, but it relies on the other station using the same
software. It was covered in this past mont's QST. It probably isn't all t
that helpful if all parties have to run the same software.

It should not be an impossible task to design software that can
auto identify the various digital transmission modes. It is less likely
that we would want to auto-switch, as we'll likely be operating in one
mode at any given time.

Here is a link that can help you identify the way that various modes
sound:

http://www.kb9ukd.com/digital/

Other info is that PSK tends to little "islands":

160 meters: 1838 KHz
80 3580 KHz
40 7035 KHz
40 7080 KHz
30 10142 KHz
20 14070 KHz
17 18100 KHz
15 21080 KHZ
15 21070 KHZ
12 24920 KHZ
10 28120 KHz

Try 20 meters first - it is the busiest PSK band

Which fits right into my prediction of 0% to 1% growth!

And I'll take 0.35% growth over a decline.

But what is completely unknown at this point is whether the growth
will continue. After the 2000 restructuring, the license numbers
climbed for about three years - and then began to decline, until now
they are well below what they were before the restructuring of 2000.

> Except it fails to take into account hams who die who's licenses will
> remain in the count for as much as 10 years afterwards.

That's always been part of the statistics, Bill. It's part of the
reason I exclude licenses that are in the grace period.

> And statistics
> show ham radio is a very grey hobby and getting greyer all the time.
>
Those statistics need to be seen in the context of the US population.

First, the US population is getting older, too. More people are living
longer, having fewer children, and having them later in life.
According to the Census Bureau, the median age for the US population
(half older, half younger) is now over 39 years! From 1990 to 2000, it
rose by more than four years.

Second, while we occasionally read stories of young children earning
an amateur license, in reality there are, and have always been, very
few hams under the age of 10 years. So if we remove the under-10
population from consideration, the median age of amateurs should be

somewhere around 50 years.

Is there any real data on the median age of amateurs? Does a database exist that contains date-of-birth so that the actual statistic could be developed?

My personal opinion, based on looking around at gatherings of amateur radio operators and on-the-air contacts, is that the median age is closer to 60, at least for US ops. I wish we had real data.

Keep in mind though that this also is not representative. It is the older operators and retirees that have the time and money to more actively participate in the hobby.

This is true in many activities. For example, the average age of the members in the community band to which I belong is also in about the 50 to 60 year old range.

I don't know of any.

At various times, FCC has required date-of-birth information. But that policy has changed over time, so the license database contains DOB info on some, but not all, US hams, depending on when they were first licensed. So the FCC license database is not a reliable sample or source.

> My personal opinion, based on looking around at gatherings of amateur
> radio operators and on-the-air contacts, is that the median age is
> closer to 60, at least for US ops.

The problem with using such observations is that they are not reliable samples either. For example, the hams you see at gatherings are those who have the time, interest and resources to go to them. The younger amateur who is raising children, taking care of elders, busy with a career or education, etc., is much less likely to go to a hamfest or club meeting.

Similar concerns go with on-air observations. The younger ham with a car full of children is less likely to be operating mobile, for example. The ham with a 60-hour-per-week day job is not likely to be on the air at 2 PM on a weekday. Etc.

> I wish we had real data.
>
Me too!

The numbers I see published lack even the most basic detail. For example, I've seen claims that the "average age of US hams is xx years" - without any info about how the number was derived, whether it's the mean, median, or some other number, nor how it compares to the US population as a whole.

I know plenty of licensed people a lot younger than that who have plenty of money to go on air but have simply lost interest. The internet has a lot to do with it IMHO, this discussion for example would probably have taken place on a packet radio BBS 10 to 15 years ago. Indeed I ran a packet BBS for 11 years, when I started it in 1993 I had around 100 users, when it closed in 2004 there were just three.

They have just introduced a lifetime licence here in the UK, which means no more renewals will be necessary, although a licensee will have to confirm every 5 years if they still want to retain the callsign. This will still give a false impression of the number of people actually on the air, though.

> This is true in many activities. For example, the

There are also those who still hold licences but are inactive. Of the 20 or so people that I still keep in touch with from my old radio club, only 3 or 4 apart from me are still actively on the air, even though they still hold callsigns, plus I'm the only one of those who still has 2m/70cm equipment in the car. Age wise, most of them are anywhere between 30 and 50, with one or two approaching 60 and one who is 62.

0.023 % actually (understanding the typo on decimal point).

>And, decreasing
>every year. Why would you be surprised that more and more places don't
>want structures they consider unsightly in their neighborhoods.

It's a matter of esthetics and all neighbors wanting the
place where they live to be nice. I've lived at this QTH
for close to 44 years and have seen it grow more attractive
when all in the neighborhood take pride in making their
homes and surrounding territory look good. No unsightly
trash lying around, no rusted car hulks, no huge satellite
dishes of the old kind, just nice upkeep on their property
and landscaping.

My only restriction is of the FAA kind since I am located
about a mile from the nearest corner of Bob Hope Airport
in Burbank, CA. However, trying to put up 200 feet of
tower (plus some) won't get me over the near hilltops for
low-angle HF shoots to the north to east. That didn't
matter when I bought this place back in '63.

>As has already been stated (and was stated when we argued this more
>than a decade ago) CC&R's are contractual matters and you are not

>area that doesn't allow antennas it was your decision. The argument
>that you can't find a place that allows them is bogus. What you

>can't find is a place that is willing to operate by your terms.

The center area of Santa Barbara, CA, has (perhaps) the most draconian restrictions beginning with the style of architecture (!) in keeping with tradition of olde California living. For those that want to live in that style, let them enjoy it say I.

>If you want an antenna farm buy property where that is allowed.

Some 53 years ago I lived and worked IN a two-square-mile former airfield filled with wire antennas and their support poles. For half a year until the Army reassigned me to another place in Japan. That airfield also had dozens of Japanese farmers on it, living and working at their agricultural tasks. Those Japanese who contracted with their government to work that land resented the "intrusion" of a military who filled their observable sky with wire and hundreds of poles...not to mention disturbing their BC receivers with about 250 KW worth of assorted HF signals from that large transmitter station. The farmers were there first but their government let the USA put up that station. Needless to say the farmers were upset with it. While I enjoyed that assignment, I could understand their dislike of their new conditions.

>If you want to live in developed neighborhood, then either build one
>full of hams or accept that your neighbors don't share your idea
>of aesthetics.

That's the bottom line. It's a matter of priorities in life and getting along with all the others in a neighbor-hood. Radio amateurs are generally out-numbered by all the others who do NOT share hams' liking for "living IN a radio station."

I'm planning a new ham station installation but I'm also considering the esthetics from my neighbor's point of view. I LIKE my neighbors and I LOVE my wife who lives with me even though she does not share my electronics interest of work and play.

Best to double check that math. It is indeed approximately 0.2% (not 0.02%)
or about 2 hams per thousand people.

Great idea, Cecil! Be my guest.

If my research is correct, the first "ARS License Numbers" posting I made was back in September 2001, comparing the numbers of September 22 2001 to those of May 14, 2000.

> the antenna's height to no more than 12 feet above the roof line.

FCC only did that because the Supreme Court told them to.

IANAL, but here's what I learned:

What happened was the satellite TV folks claimed that no-antenna CC&Rs
were unfair restraint of interstate
commerce. IOW, they effectively created a cable-TV
monopoly in many areas, because the satellite TV
pizza-dish antennas won't work reliably unless they
can 'see' the satellite.

The satellite TV folks fought it all the way to the Supreme
Court, and won. But only for the small dishes.

"Regular" TV broadcast reception was also included, if the TV antenna
did not exceed a certain size and wasn't more
than a certain height above ground. But the antenna must be
used *only* for TV reception - not ham radio, Wi-Fi, FM radio, SW
radio, public service, etc.

For more details, search for the "OTARD" ruling ("Off The
Air Reception Decision", IIRC.)

It doesn't matter what the HOA rules, deed restrictions,
covenants, etc., say, or that people knowingly bought into
places with "no antennas" clauses. Unless they're in a
certified historic district, they have the right to put up
certain antennas for TV reception. The Feds preempted
those contracts and rules.

>
> Yes, I know some HOA's prevent even the use of a 2 meter "J pole" taped to
> the inside of the owner's window....
>

In reading this discussion, it seems there's a major point
being missed: reasonable accomodation.

The issue isn't just about towers and big beams. It's about
unreasonable prohibition of even simple wire and vertical
antennas that are almost invisible.

The simple solution of "don't buy a restricted property"
works well in some places and not in others. It all depends
on what houses are for sale in an area when *you* need to
move. In some areas, there's no shortage of affordable
unrestricted homes for sale, but in others, they are
essentially nonexistent.

The history behind antenna restrictions, BTW, have nothing to do with ham radio or aesthetics. They were instituted at the urging (read: financial support) of cable TV companies in the mid 60s to prevent outdoor TV antennas from being erected, forcing the buyer to take cable service at a time when all one could get on the cable were the local TV stations anyhow. Like a bad fungus, it kept on attaching itself to every new development filing - "monkey see, monkey do".

With all due respect, Bill, there have been several surveys in the past years that new or modern developments all have the same "boilerplate" restrictions. You are certainly entitled to the opinion which you have presented above, but it's not in the best interests of amateur radio as an integral part of our community. If it takes the government to force reasonable accommodation, so be it. Somehow it has to be done. That's my opinion.

A large part of my legal practice is concerned with fighting unreasonable zoning restrictions on radio facilities, including amateur radio stations, whether instituted by government or by individuals.

As you know, Jim, we passed up three homes which were better and nicer
than the one we got because of restrictive covenants or in one case a
"thick" local zoning authority which was known to not understand what
"reasonable accommodation" is all about.

I'm assisting in a case this coming week on just that issue.

The history behind that is that The Congress in passing the
Telecommunications Reform Act of 1996 specifically directed the FCC to
do that. This of course was at the urging of the satellite TV
companies. Money talks, and big money talks loudly.

The FCC specifically said in reply to a petition by the ARRL recently
that until and unless The Congress directs otherwise, they will not
exercise the preemption on CC&Rs and HOA regulations.

Cecil, look up the term "contract of adhesion" in a legal text on
contracts. It is a "take it or leave it" situation where there is no
real bargaining.

In California, where I practice state law, a deed restriction or HOA
regulation can be declared unenforceable if it is found to be
unreasonable but the burden of proof of unreasonableness is on the
homeowner seeking relief.

Phil,

Not being a lawyer, I won't attempt to argue the law with you ;-).

I think that "public interest" is, by its nature, subject to debate.
It's also something that is debated only when the "public" doesn't know
what's good for it: after all, if everybody agreed that there should be
hams and that they should have antennas, there would be no problem. That
means that decisions about public interest _always_ involve political
risk, and politicians are the most risk-averse group on the planet.

I have said before, and will repeat here: there used to be a de facto
agreement between hams and the military. We were a trained pool of
operators who could be drafted and placed in service quickly during
wars: that's why the NTS is a mirror of the military network model.
Since the military wanted hams to be (pardon the pun) up to speed, it
defended our frequency assignments in an era when there was fierce
competition for HF from short-wave broadcasting, point-to-point
services, and even other government agencies.

Times have changed: military electronics are too complicated and secret
for civilian training to be meaningful, and code is pass, so hams
aren't high on the pentagon's list-of-friends right now. Ergo, no free
ride at the allocation conferences or inter-agency sessions, and no
"public interest" in keeping hams on the air.

In addition to the military connection, we were also the beneficiary of
the government's push to increase science education in the wake of the
Sputnik panic and ensuing Apollo programs during the cold war. Movies
and periodicals showed hams as young wizards, with attendant benefits:
our neighbors, by and large, admired us and looked the other way when we
wanted a beam.

However, that is also in the past. International phone calls are now routine, cell phones have removed any sense of wonder from mobile radio, the Internet has given curious children access to different points of view and cultures from all over the world. Small wonder, then, that aging baby-boomers, eager for their own quarter-acre of paradise, have endorsed deed restrictions and other ways to prevent their neighbors from darkening their view of the skyline.

So, we come to the question of what the public "needs". We hams are no longer valuable just for our everyday skills, such as Morse, and we're not nearly good enough at providing other public services that might justify overriding local ordinances. Unless Uncle Sam can be convinced that Amateur Radio is once again relevant and worth keeping, I don't see the government stepping in where contracts are involved: there's too much political risk and no pressing need for intervention.

YMMV.

Bill

> "reasonable accommodation" is all about.

Hello Phil,

Yes, I remember that.

Here's another example:

I moved to this house in October of 1999. It has no anti-antenna restrictions at all. However, it *does* have a page and a half of fine print deed restrictions about what can and cannot be done with the property. The house was built in 1950, too.

Those deed restrictions were unknown to the seller and the real estate agents. My real estate attorney and I found them by reading the deed/title (can't remember which) and finding a reference in there to "all other restrictions filed...." That led us to the County Courthouse, where the restrictions had been filed for the whole development a half-century earlier. If I hadn't pushed the issue, I never would have known about the restrictions.

Some might say that it's just due diligence to look up everything about a property before buying. That's true, but often it's not practical. When the RE market was hot here, houses were often under contract the day they went on the market. Even now, with higher interest rates, good homes don't stay on the market more than a few days.

As you know, disclosure laws vary from state to state. Who is going to walk away from a sale at the last minute because they were informed of restrictions at the closing?

To me, the most ominous facet of deed restrictions and
covenants is that they are designed to be unchangeable
forever. When it comes to laws, zoning codes and
ordinances can be changed, variances can be allowed, etc., but deed
restrictions and covenants do not fall under
their jurisdiction. As properties have boilerplate restrictions
added, the number of ham-friendly homes drops.

Phil,

And California is one of the lucky states where there is at least the potential for relief from unreasonable CC&Rs. Not many do, as you know.

It also seems somewhat atypical of California. Where I live, there has been an increasing stream of people moving to escape, their word, California nuttiness. Of course, they are promptly surprised to find out that they are expected to get along with their neighbors without endless rules, regulations, CC&Rs, etc. Quite a culture shock, but after a couple of years they fit right in.

When I bought my house in CA, I amended the antenna restriction portion of the contract. When the neighbors objected to my antennas, I dragged out the contract and showed them the marked out section initialed by me, the seller, and the planning commission. It probably would not have stood up in court but it never got that far. I was sorta like that ham in Lubbock, TX. Did you see that video?

261. Public service and ham radio

Newsgroup: rec.radio.amateur.moderated
Date: 2007-03-12 20:30:12 UTC
From: Steve Bonine <spb@pobox.com>
Message-ID: <12vb5c0m9duatb4@news.supernews.com>
Source record: 5152

Reading the recent thread on antenna restrictions has me musing about public-service aspects of ham radio. This has always been an important aspect of the hobby for me; somehow I never got hooked on things like chasing DX, collecting wallpaper, or winning contests.

Bill makes good points about how ham radio's contribution to military readiness and science education has changed over the past decade or so. I'm beginning to wonder if, in another decade or so, ham radio will be in the same public-service category as stamp collecting. (Nothing against stamp collecting, but as far as I know the hobby isn't known for its public-service aspects.)

When I examine the potential for public service from the hobby, I separate them into the two areas of disaster and non-disaster.

Non-disaster includes providing communications for local events like parades. Time was that ham radio operators were really key in this regard, then along came cell phones. Ham radio still provides a pool of people who can pitch in and help, but it's not the only pool now. I'm sure there are shining examples of ham groups that continue to provide stellar service to this kind of event, but my personal experience suggests that the hobby is becoming less and less involved with helping out in non-emergency situations.

Then there's the disaster aspect, the "when all else fails, ham radio works" event. I was a part of the Katrina effort; I saw ham radio working when the communications infrastructure had failed. But I saw other things, too. I saw vanishingly little health-and-welfare traffic on NTS. I see organizations like the Red Cross pumping lots of money into satellite-based communications systems that can be quickly deployed for the next Katrina-like event.

How can we maximize the potential for ham radio to contribute to public service in the future?

One thing that I think we need to realize is that hams are a pool of people who can help, but we no longer have a monopoly on communications, especially for non-disaster events. We need to pitch in and get the job done, not fixate on providing communications. If the organizer needs someone to direct traffic, and you refuse to do that because your job is communications, the organizer is going to find someone with a cell phone who is willing to direct traffic and also can handle communications.

Hams need to work more effectively with non-hams. For example, if FRS/GRS radios make sense, they should be a part of the plan. Local events can provide good recruiting opportunities to get people

interested in the hobby.

ARRL needs to step up to the plate and actually _do something_ about a national plan for ham radio in a large-scale disaster. It has been 18 months since Katrina demonstrated the need for such planning, and while there is progress, it is slow. ARES organization is great in some areas and nonexistent in others, so the training level of people who show up on the scene varies from excellent to zero.

I feel that ARRL has been unnecessarily antagonistic to the Red Cross. The first news release that came out regarding background checks was downright derogatory, although each one since has been progressively less confrontational. While I applaud ARRL's attempts to protect the interests of their members, some of the language has been unnecessarily harsh. In a large national disaster, Red Cross is running the show in most of the areas where hams can contribute, and it's to everyones' benefit to improve the relationship between the two organizations. It strikes me as ironic that the hobby is essentially communications, yet we continue to demonstrate that communications is not our strong point when it comes to inter-organization politics.

I hope we're able to maintain a public-service aspect to the amateur radio hobby. Without it, little details like frequency allocations and the ability to erect antennas will suffer.

You are aware, aren't you, that Amateur Radio has been integrated into
Homeland Security as a necessary civilian resource. Here. we are the
backup for the county's and cities' public safety and hospital
communications and we are used for real-fife situations regularly.

International treaties and Congressional legislation specifically
provide valuable spectrum resources for Amateur Radio on an exclusive
basis. That sounds like "relevant", "public interest", and "worth
keeping" to me.

Our folks (Washington County, Oregon ARES/RACES/HEARTNET) are capable
of multi=tasking, but our served agencies and the Incident Commanders
(remember the NIMS ?) are tasked with using the specialists for
specialist tasks. For example, of we need to move the EOC's comm
console (which is on wheels) from the EOC to a relocation site, we get
movers from the Labor Pool. That's THEIR job. If there aren't enough
laborers to do it, that's the IC's problem to delegate someone to get
them per the Plan.

Our county operations are totally integrated with the various cities'
CERT members who use FRS/GMRS as their primary comm system. As a
result, we've recruited quite a number of CERT people as new hams, and
they make GOOD hams, (with or without code!).

Actually, it isn't just for TV reception:

http://www.fcc.gov/mb/facts/otard.html

"Fixed wireless signals" are any commercial non-broadcast communications
signals transmitted via wireless technology to and/or from a fixed
customer location. Examples include wireless signals used to provide
telephone service or high-speed Internet access to a fixed location.

I have friends who have HOA restrictions but had no problem putting
up antennas for Sprintlink (wireless Internet access) because of the
OTARD rules.

That's a step in the right direction, but we hams are still outside
that
fence looking in.

And the preemption is specific about size and height of
antenna. Even if ham radio were included, a simple wire
antenna like the G5RV would not be covered.

Thanks again for the info.

That's correct. I was just addressing the "TV only" statement. It
would be great if there were similar rules about amateur radio antennas.

I run an FT-897D in the shack, and an FT-857D mobile. They're pretty much the same radio in two different packages, and both are good rigs IMHO. They're menu-driven, rather than having one button or knob or switch per function on the front panel; they don't have enough front-panel real estate to accommodate all the necessary controls, and so I have to dive into menus occasionally to do things like move the edges of the DSP high- and low-pass filters and set the output power level.

I have an FT-857 (no "D") as a second shack rig; it doesn't have 60 meter phone, which is no loss to me, but does have DSP: I bought the processor and installed it. It's a nice rig, too.

With the MH-59A8J DTMF remote hand mic., which fits both the FT-897D and FT-857D, you have control of everything except squelch levels on the mic; I find this extremely useful for mobile operations, and have one on the shack rig as well, so that I can run the rig from the bed when I'm feeling lazy.

There probably are more sensitive receivers, and quieter receivers, and receivers with more bells and whistles. I get good-enough DX with the ones I have: Canary Islands on USB phone yesterday while driving home; France, Canary Islands, and other pretty nice DX from the shack in the last month. See <http://mikea.ath.cx/hamlog> for a more complete list.

While I've had no experience with the TS-480SAT, I do have a Yaesu FT-857. This is the same radio (circuitry) as the FT-897, but in different packaging (face and provision for batteries). It is a little smaller than the FT-897 and may be something to consider, although no provision for internal batteries.

I use my FT-857 for mobile with it's removable, remote head for the car and put the radio in one piece for portable use. I use it for tent camping and also while at fly-ins with my small airplane, both with a small battery I carry. For antenna I built a portable vertical which covers from 80 through 10m, but if trees are handy I use a small tuner and a random wire.

The radio performs very well, power output can easily be adjusted for your battery usage requirements, has a wonderful receiver, and works equally well with ssb or cw. I can heartily recommend this radio.

If I recall (only from advertisements) the TS-480SAT has a remote head but cannot be put together, although this could certainly be managed somehow, I would think. That might be a factor for you. Also, if weight is a consideration, for such as backpacking, that may become a factor in your choice. Make sure you can vary the power output adequately if you need to do so for battery life. Depending on your antenna situation, the built-in antenna tuner in the 480 might be handy, although there are several small, portable type tuners available.

The above are just some thoughts that come to mind in operating portable and sure you should have more input on this from others.

What is the process of modifying the gentlemen's agreements?
Specifically, I would like to explore the idea of adding a new PSK31
segment or two.

Presently, the "suggested frequencies" take up about a ssb voice slice
of bandwidth per band. And that slice is getting pretty busy. esp on 20
meters.

While the short and simple answer is just move to a new frequency, in
practical terms it is nice for low power modes like PSK 31 to have a
place to gather.

Hi Steve. Your's was a thoughtful post. I would like to bring in some observations of my own on the topic of Emergency communications and public service.

We still do some help with events. We even had a group come back to us after trying to go with cell phones. Turns out that at a few critical times, the critical person was not in range of a tower. And the biggest problem turned out to be getting a message to everyone at once. One call on the repeater can do what ten cell phone calls could do, plus repeats for those out of range.

Whatever is come up with, it will probably be another infrastructure laden system that will fail with the first major disaster. And if it isn't, then it should be a welcome addition. My money is on heavy infrastructure. (for what will be built, not how it will work)

> How can we maximize the potential for ham radio to contribute to public
> service in the future?

Maximizing might be a tall order. Not all Hams are interested in public service. I think that PS will always be a subset, just like DX'ing or Building equipment.

I am interested in Public service, but I have a number of concerns.

That is a double edged sword though. I've read and listened to a lot of EC Hams telling me just that. That if I'm needed to mop the floors or unload trucks at HQ, then that's what I have to do.

While I'm always happy to do a little extra, I can say with certainty that If I volunteer for comms, and then spend most of my time with these other tasks, I doubt that I'll take off personal time in the future to do that.

I guess the metric would be that I expect to be treated in as professional manner as everyone else on the job.

> It has been 18

All things considered, Amateur radio is probably a fair way down on the list of things that need fixed.

> I feel that ARRL has been unnecessarily antagonistic to the Red Cross.

If background checks are required, it is a fact that we will lose people. I was involved with a youth organization that required background checks. A lot of people simply won't get involved. Either they have a philosophical reason, or have some kind of minor offense in the past. Even though we assure them we aren't looking for people who may have been throwing eggs at the principles house in high school- we're looking for people who shouldn't be around children - most say something like "I won't take that chance, and the possible embarrassment and damage to my reputation is not worth it". And mistakes do happen.

> I hope we're able to maintain a public-service aspect to the amateur
> radio hobby. Without it, little details like frequency allocations and
> the ability to erect antennas will suffer.

If I were to make some suggestions for the Emergency Comm Hams, this might be it:

1. We need to ease up. Emergency comm Hams have a lot of statements that start out with "Amateur radio must....., or Amateur Radio has to..... All referring to some sort of shortcoming of Amateur Radio.

2. What am I doing here? I've seen a lot of articles telling us we have to be ready to do whatever we're assigned to do. While this may in fact be true, the approach can be improved.

An example of a bad approach, very similar to what I have read in an article, and in the general tone of a lot of ARS emergency

communications criticism:

"Hams have to get rid of the idea that they are just there to operate radios. They may need to unload trucks, mop floors, or bring the EC employees coffee".

Perhaps this is better:

"Operations during disasters can be chaotic at times, and we may find ourselves helping in many different ways. Communications, errands, and sometimes even helping to keep the EC in order may be part of our job."

I even read an article about switching over to new forms that are consistent with other Emergency ops. Great idea, but they spent too much time attacking the old forms, when all they had to say was that it would improve consistency.

3. What do Amateurs have to tell the "pros"?

4. These people are volunteers. I've run organizations of volunteers, and you can't run them like you can paid staff. I can order a paid person to change their ways or else, and almost always they will. Give a volunteer that same order, and they will probably find a better way to spend their time.

That's the kind of thing which makes amateur great. There's room for
those with any number of interests within it. Some enjoying
experimenting with circuitry.
Some enjoy digital mode ragchewing.

> When I examine the potential for public service from the hobby, I

> parades. Time was that ham radio operators were really key in this
> regard, then along came cell phones.

I don't know when you came into amateur radio, Steve, but when I
entered it, there was very little in the way of radio amateurs
providing communications for a parade. I've never thought it a valid
use for ham radio. Our local ARES group has participated in things
like Independence Day parades and Christmas parades. The ARES group
in the county to the north of us provides communications for a number
of running marathons. I do not participate in these activities.

>Ham radio still provides a pool of

I think that is probably a good thing. I'm part of ARES because of
what the letter "E" stands for.

> Then there's the disaster aspect, the "when all else fails, ham radio

> for the next Katrina-like event.

That's a good thing too. The more communications capability, the
better as far as I'm concerned.

> How can we maximize the potential for ham radio to contribute to public
> service in the future?

Radio amateurs can get there first. They can go where a van full of
Red Cross workers can't.

> One thing that I think we need to realize is that hams are a pool of
> people who can help, but we no longer have a monopoly on communications,

We may just need to realize that there are (mostly) other alternatives
from which to choose.

> We need to pitch in and get the job
> done, not fixate on providing communications.

That's the sole reason we are involved, Steve.

>If the organizer needs
> someone to direct traffic, and you refuse to do that because your job is
> communications, the organizer is going to find someone with a cell phone
> who is willing to direct traffic and also can handle communications.

I think that's a great thing. Let the organizer find someone else.
I'm not showing up to direct traffic. For the past couple of years,
our local ARES group has participated in our county fair--as parking
attendants. I'm not going to show up to be a parking attendant. The
county fair makes money. Let the fair hire parking attendants.

> Hams need to work more effectively with non-hams. For example, if

I'm not sure just how detailed a national plan for amateur radio
disasters can be.
What works for a group on flat terrain or in an urban or suburban area
may not work well at all in a swamp or in mountainous terrain with
poor roads.

> It has been 18
> months since Katrina demonstrated the need for such planning, and while

> we continue to demonstrate that communications is not our strong point
> when it comes to inter-organization politics.

If the American Red Cross wants to do a background check on me, based upon whatever information it can readily find, that'd suit me. If it expects me to submit financial information, that isn't happening. If it finds itself short of volunteers, it'll likely wake up. Our local ARES group is supported by Marshall County, West Virginia. The county provides us with a place to meet, space for an operations center. It provides us with money for equipment upgrades and maintenance and even provides tower space for an ARES repeater. We work closely with the Marshall County Office of Emergency Services. The Red Cross isn't a factor.
Marshall County ARES is likely to be activated during flooding, searches for lost individuals (with the Northern Panhandle Search and Rescue team), the aftermath of wind storms and fires/explosions at area chemical factories.

> I hope we're able to maintain a public-service aspect to the amateur
> radio hobby. Without it, little details like frequency allocations and
> the ability to erect antennas will suffer.

I suspect that a reduced public service role won't play a large part in our ability to erect antennas. I exercised my choice to buy a home in an area where no one may tell me what antennas or towers I can install and no one can tell me what color to paint my house. I wouldn't consider buying in a place where conditions are otherwise.

In some cases, the regulations in CC&Rs are governmental requirements.

Years ago, while looking at houses for sale, I stopped in on a newly constructed pair of houses on what had been a single large (for the area) lot. While talking to the selling agent, I learned that there was a requirement that the houses have no antennas, and that when cable reached the area, they could not even have TV antennas. (Yes, this was before the FCC stepped into CC&R issues with broadcst TV antennas.)

I asked why. The explanation was that the city required them to include those restrictions in order to get the permit to develop as they had.

So, CC&Rs are not always private agreements.

I understand that the FCC didn't want to get involved for Hams, but
they did use PRB-1 to pre-empt these private contracts for TV and Data
Services so they do have the right.

> I think homeowners are justified in seeking relief from _government_

One can argue that there is a compelling interest in providing
"reasonable accommodation" for armature radio. Should I desire to put
up any kind of usable antenna, my options are as follows:

1. Get the HOA to back off by my persuasive arguments about the
neighborhood being better off having such communications
infrastructure in my back yard. (Very unlikely)
2. Move to a different house that has less restrictive CCNR's. (Which
I cannot find with the same quality/price that I have now)
3. Put it up anyway and wait for a court order to take it down (and
pay the HOA whatever they decide the fines are going to be) (Which I
cannot afford, I'm sure.)
4. Hope for a state or federal law that preempts the CCNR's I feel
where forced on me in many ways.

I'm here to tell you that in Northeast Dallas you are very unlikely to
find reasonable housing in the $200K price range built in the last few
years that is not CCNR restricted from ham radio antennas. The
builders here simply use the same boiler plate CCNR for all their
developments and there is little else to buy here. It may be
different in rural areas, but I'm betting that around larger cities in
the US this is standard practice. This means that #4 is about all I
can hope for.

Those suggested frequencies are simply that: suggested.

PSK31 isn't just a low power mode, Mike. If you need to boost your
signal to compensate for band conditions, there's nothing precluding
that.

I would argue that lack of CC&Rs is a quality-of-life issue.
If I can't do reasonable things with my home, my quality-
of-life is reduced.

Now of course "reasonable" is the key factor. Putting a 90 foot tower
holding several large beams on a quarter-acre lot
isn't very reasonable. Putting up a dipole or vertical on the same lot
is reasonable, IMHO.

> can hope for.

A lot depends on the area.

Here in suburban Philadelphia, CC&Rs vary all over the place. Many
older homes, and there are lots of them,
are completely unrestricted as to antennas. You still
have to satisfy the building code, but that's a safety
issue.

With newer homes (less than 40 years old), it's a mixed bag. Some are extremely restricted, some not. It just depends on the builder and the community.

Some folks like CC&Rs because they think CC&Rs "protect property values". Yet in every case I've seen in this area, unrestricted houses command *higher* prices and better appreciation than their CC&R'd counterparts.

In my case I settled for less house and less land in order to have no anti-antenna restrictions for a given price and community. I could have gotten more for less elsewhere, but there were other considerations as to where I would live.

$200K isn't a lot of money for a house these days in many markets. Take a look at realtor.com and/or zillow.com, and see what houses go for in various cities. One thing to look for in the house description is "fee simple". While it's no guarantee of an unrestricted property, anything other than fee simple is almost guaranteed to have lots of restrictions.

I have found that the best way to approach the group you would like to support is to ask them what they need and then figure out if you can accommodate them.

Sometimes you have to tell a group you can help them in a certain area but they will have to absorb the equipment costs.. like a group that wants on site TV back to an operations center or e-mail from a field location where Blackberrys and cell text messaging don't work.

Hi Mike,

I'm not a big fan of "gentlemen's agreements". Neither am I a fan of
FCC mandated "segment by mode", a related issue.

If the "market" is demanding more space for PSK31, then let the market
forces prevail. A broader PSK31 segment will occur (or not occur)
based on the priciple of supply/demand.

Were it up to me the FCC would get out of the business of regulation-
by-mode and simplify 97.305 would be simplified to read: "Here are
your band segments by license class. Stay inside them and play nice
with each other."

As you say, different strokes for different folks.

There are good reasons for participating in these kinds of events. For
an ARES group, these kinds of events provide an opportunity to actually
do something besides checking into a weekly net. Training is key for
ARES groups. Actually getting into the field and using radios to do
real communications is the best kind of training. Short of an actual
disaster, public service events provide the best opportunity to do that.

Problem is, how many "E"s do you have? What does the group do between
the "E"s? How do they build and maintain their expertise?

Many of the same kinds of tactical-communications and organizational
skills that are valuable in an emergency situation are used in public
service events.

> poor roads.

The main thing is to get people deployed. For Katrina, the Red Cross went to ARRL a couple of days into the event and asked for help. ARRL had to start from scratch in terms of finding people who were able and willing to help. They put a notice on the web site asking interested volunteers to send mail to kartina@arrl.org and went from there. It was a great effort, and it worked, but it would have been so much more effective if there had existed some sort of national database containing information on hams who were able to help. This was the recommendation of the committee put together after Katrina, and I expect that such a facility will eventually be built, but it sure would be nice if it were put in place before this year's hurricane season.

As for a national plan, I think that the training provided by ARRL in emergency communications is valuable. Sure, different techniques will need to be used depending on the type of disaster, the terrain, and so on. But there are certain basic things that will always be true, and teaching people the basics is extremely valuable when you have to build a team quickly using people from many different geographic areas. Just teaching vocabulary so that everyone is speaking the same language is a huge asset.

> If the American Red Cross wants to do a background check on me, based
> upon whatever information it can readily find, that'd suit me. If it

Basically the information that the Red Cross is asking you to provide is your Social Security Number so that they can be sure that the information they're obtaining is really about you. A lot of people have a problem even with that. In today's environment of identity theft, I can understand that.

> If it finds itself short of volunteers, it'll likely wake up.

"Waking up", in the sense of not requiring the background check, isn't an option. The background check has been mandated by all the publicity related to fraud during previous operations. Red Cross volunteers will have to submit to the background check. Some will refuse. Volunteers will be lost. It's a fact of life in today's society.

There's another issue, though. When is an ARES member considered a Red Cross volunteer? This has been a sticky issue, and no doubt will continue to be one. ARRL still has not updated the information on their web site to reflect recent changes in this policy.

> Our local
> ARES group is supported by Marshall County, West Virginia. The county

> factor.

On the local level, I understand. But if there is a large national disaster, Red Cross will be a factor. In fact, they're likely to be

calling the shots in many of the areas in which amateur radio is involved.

> I suspect that a reduced public service role won't play a large part
> in our ability to erect antennas.

I think that the fact that amateur radio serves a public interest is key to the survival of the hobby, not just in the sense of erecting antennas, but in terms of maintaining our frequency allocations and recruiting new hams. How many teenagers, clutching their cell phone in one hand, are going to be wooed into ham radio by the allure of talking to someone in the next state or even a country on the other side of the world? But show them a news story about how ham radio is key to providing communications in an emergency, and a few of them might be interested.

How many voters care that we can sit in our shacks and chew the fat with our peers, or chase wallpaper? But sell them on the fact that ham radio provides a valuable service if there's a flood or tornado or blizzard, and they might be willing to tolerate an antenna.

Ham radio is a unique hobby in the sense that it requires support from governmental agencies in order to exist. Public service has always been an important aspect of justifying and obtaining that support.

Here are some really rough calculations for my area:

Presently licensed in the State College area:

231 - I'll have to subtract 3 club licenses

229 local State College Hams

In the past 6 months, we've had around 2 hams per month added by club
testing. Note that this includes testing under the old system.

The local University also has testing as part of one of the EE classes.
I don't have the exact numbers, or even close. They test by semester.

Given that about 12 hams have been added to the rosters by us in the
last 6 months there is at least a 1 percent growth rate - disregarding
the college group. Taking a rough estimate, they must be doing at least
as well, as the classes continue. My guess is that the final growth in
this area is around 2 percent. That is as just about at the top of the
growth that I would like to see.

We often speak of the effects that recent changes will have on the
number of new Hams coming into the fold.

I think this is a bit of a red herring attribute.

I think that growth in the service is much more dependent on what we do to get people into it.

We've been on a recruitment effort that allows the new guys and gals to not feel inadequate. We're teaching real basics, like how to solder, how to read color codes on resistors. That kind of stuff. Oh yeah, and how to operate that HF rig. I'm our club station manager, and we're turning one corner of the building into a classroom for the new folks. And we're being very careful to not sound like we know everything. (I don't have to work too hard at that) ;^)

Very true. What would be nice would be some extra suggestions. What would be nice would be to have another couple SSB signals worth of space, separated by enough to allow a RTTY signal or two between 'em.

>> While the short and simple answer is just move to a new frequency, in

> that.

We've always tried to use as low power as possible. Unless a person's signal is extremely good - I'm talking about top-notch sound card, very low drive, and precise transmitter settings - that signal starts getting very wide, and gets into everyone else's transmissions. Occasionally you can help a little with turning the ALC off.

I guess that would mean a group of us PSK'ers would decide to pick another frequency as secondary and start moving there. Keeping in mind that we are a tiny (but growing) segment of the activity, just one SSB signal in width per band essentially. We need to know where to find each other.

> Were it up to me the FCC would get out of the business of regulation-

I guess the key would be just how nicely we would play with each other.

However, it is foolish to look at short-term results and
assume they will continue. Day-to-day variations can be quite
large.

For example, the most recent numbers I have at hand are
for March 12, 2007. Total current FCC-issued licenses
on that date (as of 7 PM March 13) were 654,331. That's
349 less than the 654,680 on Feb 22. Of course tomorrow's
numbers may be much higher.

That's all good stuff - for the State College area.

But it may or may not be applicable to other areas. We really don't
know for sure.

> • • • • We often speak of the effects that recent changes will have on the

> to get people into it.

I agree 100%.

However, in recent decades, one of the main reasons given for
changing the license test requirements has been to stimulate
growth. Time and again, those pushing for the changes have
said they were absolutely necessary in order for the number
of US hams to grow in the future. So it's certainly worth watching
to see whether they were right or wrong.

I disagree!

It seems to me that the best way for the different modes to
coexist is for like modes to cluster together, rather than being
spread about the band. If PSK31 is currently between
Frequency A and Frequency (A plus 2.7 kHz), and more room is needed,
it seems the most logical thing to do is to
spread out a little below A and/or a little above (A plus 2.7)
That way it's easy to find each other.

IMHO the whole point of gentleman's agreements is not to set
a hard line in the sand that marks absolute territory (the regs
do that)., but rather to be a flexible line that moves as
conditions warrant.

This will be more and more important in the future, as more
diverse modes share the same bandspace, often without the
ability to intercommunicate.

Expecting every amateur station to be equipped to transmit
and receive every possible digital mode in use by hams on
a band just isn't reasonable. So we need gentleman's
agreements.

IMHO.

Hi All,

Well this group has been up & running for a few weeks now and I still seem to be the only one here from the UK..!

I haven't been all that active I admit, but blame work, we've had the builders in making serious alterations to my office (think knocking walls down etc..!) and it's been rather hectic..!

Anyway, let's hear from some others this side of the pond :-)

That's "Regulation-By-Abstention", Hans, which is no regulation at all
and is extremely poor policy. The FCC has done far too much of that
in the last 20 years, which pains me no end, and not only in the
Amateur Radio Service. It's the FCC's -JOB - to find out "what the
market wants" and to react to that as regulatory professionals, not to
hide behind the curtain or under the rug.

The real reason was that the cable company got to the city to force
the developer to put such a restriction into the CC&Rs. A little
"hand-holding" between the city and the cable companies is not unknown
in this business.

290. rec.radio.amateur.moderated Posting Guidelines

Newsgroup: rec.radio.amateur.moderated
Date: 2007-03-15 06:00:02 UTC
From: rram@panix.com
Message-ID: <radio/ham-radio/moderated/guidelines-1-1173938401@panix.com>
Source record: 5181
Cross-posted to: rec.radio.amateur.moderated,rec.radio.info

```
Posted-By: auto-faq 3.3.2 beta (PGPMoose V2.0, Perl 5.005)
Archive-name: radio/ham-radio/moderated/guidelines
Revision: 1.2 2007/02/22 18:15:39
Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
promoting or defending unlawful activities, etc. Crossposts of regular
discussion articles between rec.radio.amateur.moderated and other
```

discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness,
suitability and/or readiness of any individual (or members of any group)
to be an amateur radio operator are unacceptable in this newsgroup. If
an individual chooses to post asking for advice on when or whether to
obtain an amateur radio license, or to participate in any type of lawful
activity in the Amateur Radio Service, respondents should be careful to
address their comments only to the original poster and not explicitly
generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur
radio licenses, or certain members of national amateur radio societies
(e.g., American Radio Relay League, Radio Amateurs of Canada, Radio
Society of Great Britain, Wireless Institute of Australia, etc.), to be
more or less worthy than others, are not permitted. Posts that politely
encourage individuals to join their local amateur radio society, or to
upgrade to higher classes of amateur radio license in order to enjoy
greater operating privileges, are permitted, however. Posts that
contain reasoned, civil, and fact-based discussion of the activities and
internal politics of national amateur radio societies are also
permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on
rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created
for this purpose, and should be used instead. All such articles will be
rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or
other public relations campaigns will not be permitted. Relatively
unbiased announcements or reviews of new amateur radio-related products
or services may be permitted at the discretion of the moderators. Such
posters are asked to disclose their financial or professional interest,
if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true."

"That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/about/whatis/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

It does make it easy, very true.

A little bit about my seemingly weird rationale.

RTTY signals often trash the segment, especially when there is a
contest going on. A couple RTTY signals in the segment, PSKer's just
turn their radios off (or switch modes) My thoughts were that if there
were a RTTY station in between segments, another RTTY will probably set
up far away from them to give us a little breathing room

We really get hammered by those robot stations. Open up on top of us
and since they are automatic, not much can be done about it.

Digipan does have recieve software so that we can ID the station and
issue a complaint to the FCC. I haven't seen as much of it lately,
mayber the complaints are working.

I don't mean to sound like a wimp regarding PSK31. It is just a unique
and low power mode that is easily disruptable by other modes.

CQ CQ CQ

I am looking to buy an antenna tuner and would appreciate suggestions and/or recommendations from the group. I will use it with a Yaesu FT-897D and an ICOM 706IIG.

Thanks for any recommendations.

73 to all.

Maybe.

It seems to me that there are really two problems here.

The first is that there are times when there are so many

PSKers' on simultaneously that more room is needed.
That's the situation I imagined, and what my fix was aimed
at.

The second problem is when the band gets busy with
contesters and such. That's a problem every mode faces,
and going elsewhere in the band may or may not solve
it. The WARC bands are one solution.

One solution is to expand the PSK31 watering hole outside
the robot subband.

> Digipan does have recieve software so that we can ID the station and
> issue a complaint to the FCC. I haven't seen as much of it lately,
> mayber the complaints are working.

Yup. It's important to document such things, particularly
from robots, because one of the arguments put forth for
allowing "semi-robot" operation all over the band was that the
nonrobot end would avoid QRM. In the real world, that may
not work out.

> I don't mean to sound like a wimp regarding PSK31. It is just a unique
> and low power mode that is easily disruptable by other modes.

It seems to me that as the variety of modes used by hams
continues to grow, we need more and better agreements
in order to be able to best use the spectrum available to us.

--

K0HB has suggested that we let "the market" decide.
I think that has been done, in a way.

Some time back, a group calling itself the "Communications Think
Tank" (CTT), proposed simply eliminating all subbands-by-mode from the
regulations. Their proposal
would have allowed all authorized modes on every Hz of
every band.

"The market" spoke very clearly, in the form of comments
to FCC. The CTT proposal was overwhelmingly
opposed. About 7 out of 8 comments on it clearly said NO.

Sounds like a clear message from the market to me!

However, if a new market comes forth, one composed of amateurs with little or no knowledge of CW and only using digital voice and digital data transmission--it would be market controlled also, and one would suspect it would self-correct and frown on the use of the bands for wasteful analog and cw communications.

Let's face it, digital voice is the only way to go. PSK is too slow for data transmission of LARGE and multi-megabyte amounts of data, end of story.

An "industry standard" for encryption/compaction and decryption/de-compaction still needs to come forth to deal with HIGH transfer rates of digital voice and data transmission and availability to ALL hardware/software developers/manufacturers be assured to such a standard(s) ...

Great care needs to exercised when proposing and developing acceptable schemes to the above, we certainly don't need to create a "tower of babel" by not having free access to algorithms and standard methods in common use--and free use and experimentation needs to be right up front and encouraged--this only holds with the tradition of amateur radio!

> As you say, different strokes for different folks.

It is quite simple. I participate in emergency communications. In
the past, the ARRL had both AREC, the Amateur Radio Emergency Corps
and ARPSC, the Amateur Radio Public Service Corps. Interest in
participation in both wasn't necessary. I don't object if others
choose to participate in parades. I trust that they won't object if I
choose not to do so.

> There are good reasons for participating in these kinds of events. For
> an ARES group, these kinds of events provide an opportunity to actually
> do something besides checking into a weekly net.

That's a good point. Participation in a parade can be seen as a
training exercise. Parking cars, on the the other hand, isn't
training.

> Training is key for
> ARES groups. Actually getting into the field and using radios to do

You're quite right.

> Short of an actual
> disaster, public service events provide the best opportunity to do that.

Well, they provide one way to do so, but not the only way.

> > what the letter "E" stands for.
>
> Problem is, how many "E"s do you have?

I don't think anyone would like to see to many. We have had more than
enough actual events to keep us active.

> What does the group do between
> the "E"s? How do they build and maintain their expertise?

We're fairly unique in this area. The old state prison at Moundsville
is now used by national law enforcement for training. There are mock
prison riots a couple of times per year in which Marshall County ARES
is a participant. There was also a mock plague drill in which all
agencies participated throughout the area. Radio amateurs manned
positions at various EOC's, local hospitals and at the epicenter of
the event. The ARES group also participates in Field Day each year.
We've all received training in operating county radio equipment so
that we can serve as auxiliary ops in the event that there is a
shortage of professional ops.

> Many of the same kinds of tactical-communications and organizational
> skills that are valuable in an emergency situation are used in public
> service events.

Well, a number of them are used. A guy sitting in his car with a
mobile dual-bander or a fellow with an HT on a street corner for a
couple of hours doesn't use all of the skills involved in a severe
weather event which might last for days and require loads of spare
batteries and other backup equipment. Passing accurate messages via
digital modes may not come into play

I think that is a very good idea. Having a pool of trained ops who
can leave for a major disaster site on short notice would be extremely
helpful. I'd think that not many of us would be in a position to drop
everything and rush to a different region, especially for what might
become a prolonged absence.

> As for a national plan, I think that the training provided by ARRL in

You have a valid point though I don't think vocabulary should be a
problem. We're hams passing traffic via amateur radio. Whatever
official jargon the supported agency uses will be passed in its
message traffic. All radio amateur need do is relay that information
accurately.

> > If the American Red Cross wants to do a background check on me, based

I seem to recall the word "financial", coupled with the words
"background check".
Am I mistaken?

> A lot of people have
> a problem even with that.

I think I'd have a problem with that. The FCC has issued me an
amateur radio license. The FCC knows who I am and where I live. I
have other forms of identification. That should be good enough for
the American Red Cross.
I'm not hiring on with that agency. I'd simply be volunteering my
time.

>In today's environment of identity theft, I
> can understand that.

Lots of folks can identify with such things. A group of older women
used to go to a local nursing home to read to the residents. The
state suddenly and arbitrarily mandated that they be fingerprinted and
have a background investigation done on them. Now there is a shortage
of readers.

> > If it finds itself short of volunteers, it'll likely wake up.
>

> "Waking up", in the sense of not requiring the background check, isn't
> an option.

It certainly is an option. Whether the Red Cross thinks that everyone
will bow to the idea is an unknown. Who is hurt if the Red Cross has
a shortage of volunteer radio operators spending their own money?

> The background check has been mandated by all the publicity
> related to fraud during previous operations.

Were there any reports of radio amateurs being involved with fraud?

>Red Cross volunteers will
> have to submit to the background check. Some will refuse. Volunteers
> will be lost. It's a fact of life in today's society.

That was my point. Each member of our county ARES group is issued an
ID card. None of us submitted to a background investigation by
anyone.

> There's another issue, though. When is an ARES member considered a Red
> Cross volunteer? This has been a sticky issue, and no doubt will
> continue to be one. ARRL still has not updated the information on their
> web site to reflect recent changes in this policy.

As far as I'm concerned, I'm a radio amateur operating under the
auspices of the ARRL's AREC through my county organization. I'm
assigned to serve whichever agency I'm assigned to work under. I'm
never in a position where I'm working for that agency.

> > Our local

> disaster, Red Cross will be a factor. In fact, they're likely to be
> calling the shots in many of the areas in which amateur radio is involved.

The Red Cross is not the only factor though. One can work with local,
county or state police, with the Salvation Army with any number of
other non-governmental organizations. I used to belong to the
Northern Kentucky Amateur Radio Association. It did respond to the
Red Cross. My local ARES group here does not.

> > I suspect that a reduced public service role won't play a large part

> recruiting new hams.

We have the HF amateur bands through international treaty. We don't risk losing them through lack of public service participation. The percentage of radio amateurs who regularly participate in ARES or public service operations have always been traditionally small.

As discussed elsewhere in this group, antennas are quite a different matter.
The real threat to the erection of antennas is real estate covenants, not lack of participation in public service work. I don't and won't live in some subdivision with such restrictions. Others may find it a near necessity to buy in such developments.

> How many teenagers, clutching their cell phone in
> one hand, are going to be wooed into ham radio by the allure of talking
> to someone in the next state or even a country on the other side of the
> world?

I honestly don't know, Steve. I suppose that some of them who realize that their cellular phones are actually tiny, low-powered radio transceivers, linked somewhere to telephone lines in order to fuction, might get it.

I've run into a number of folks who are fascinated that I can drive my car down the highway while chatting with a friend in Finland--maybe even using Morse code--and that I'm not paying so much money per minute. Some find it very interesting that I've checked into the West Virginia Phone Net and am simultaneous contact with radio amateurs all over this state.

> But show them a news story about how ham radio is key to
> providing communications in an emergency, and a few of them might be
> interested.

They certainly might be interested. What interested you in becoming a radio amateur? Were you a kid when it happened? I was interested at 12 and licensed at 14. My interest was in talking with people all over the world without telephone wires--and aside from the modest cost of my equipment, it was for free! Well, the cost of my equipment and antennas is no longer modest, but a kid can still get on the air for a couple or three hundred bucks and a few pieces of wire. Radio for its own sake, that's what it was about for me.

> How many voters care that we can sit in our shacks and chew the fat with
> our peers, or chase wallpaper?

I'm a voter and I care. :-)

> But sell them on the fact that ham radio
> provides a valuable service if there's a flood or tornado or blizzard,
> and they might be willing to tolerate an antenna.

We should sell them on that idea, but I didn't buy my land for them, I bought it for me. If I can "tolerate" a pink plastic flamingo on my neighbor's lawn in front of his parked RV beside his pink brick home, he can "tolerate" my antenna. [all hypothetical, of course]

> Ham radio is a unique hobby in the sense that it requires support from
> governmental agencies in order to exist.

It is recognized by the Federal government and licensed by an agency of the government. Did you know that the FCC never mentions the word "hobby" in Part 97?

>Public service has always been
> an important aspect of justifying and obtaining that support.

It is part of the reason that we exist and are licensed by our government.

A great number of radio amateurs in other parts of the world pay a yearly license fee. In some countries, radio amateurs are forbidden to participate in public service work. I don't know how it is in the U.K. now (maybe Ivor can fill us in), but it used to be forbidden to use a phone patch in the U.K.

We American radio amateurs have free licenses and a great deal of freedom to participate in numerous ways in amateur radio. It behooves us to become skilled ops, using as many different modes as possible. Public service work plays a role, but it isn't the ne plus ultra of amateur radio.

Newby,

Please send us more details on your antenna(s): the type and size of
tuner will depend on the type(s) and size(s) of antenna(s) you're using
or planning.

While a "Garden Variety" tuner may be OK for a coax-fed dipole if it's
near to resonance, other feedlines and an antenna further from resonance
will need a more robust design.

Of course, some tuners have switching for multiple antennas, and some
don't, so let us know if you're using a single cloudburner, or multiple
skyhooks.

HTH.

I certainly don't object. You've described other things that you chose
to do. The thing that I object to is the folks who say that they don't
have time to participate in training, but "I'll be there if you need me
in an emergency."

Yes, but it's a lot better than nothing, and the only thing that we have
to work with in an area with no ARES.

[National database of hams trained in emergency communications]
> I think that is a very good idea. Having a pool of trained ops who
> can leave for a major disaster site on short notice would be extremely

> helpful. I'd think that not many of us would be in a position to drop

You might be surprised. Quite a few are retired and in exactly that position. I was pleased to discover during the Katrina effort that many companies are willing to give their employees time off with pay to participate in national disaster work.

> I seem to recall the word "financial", coupled with the words
> "background check".
> Am I mistaken?

You're not mistaken about recalling the words. The Red Cross is not doing a financial background check. There is controversy on how the wording reads on the web site that does the background check. I believe that the problem has been worked out, but the last I checked the information on the ARRL web site had not been updated.

>> A lot of people have
>> a problem even with that.
>
> I think I'd have a problem with that. The FCC has issued me an
> amateur radio license. The FCC knows who I am and where I live. I
> have other forms of identification. That should be good enough for
> the American Red Cross.

The reason that the Red Cross instituted background checks was to try to prevent the type of fraud that occurred during Katrina. There's no correlation between having an FCC license and passing a background check. I'd like to think that all licensed amateurs are honest upstanding folks, but I know that's not true.

> I'm not hiring on with that agency. I'd simply be volunteering my
> time.

It's not that simple.

For one thing, you are likely to be issued Red Cross credentials. This implies a level of responsibility for the Red Cross.

Also, you're likely, as a communicator, to be in very sensitive locations like the EOC or in service centers in close proximity to sensitive documents and information. If there's logic for Red Cross volunteers to be required to pass a background check, the same logic applies to the ham radio operators who are shadowing them or assisting them in close quarters. And speaking of close quarters, you're likely to be sharing sleeping quarters with these people; personally I feel better about sleeping with 100 of my new co-workers if I have reason to believe that at least some basic screening has been done on them.

Finally, there's the public view of things. The "man on the street" sees two people walking together, both wearing similar credentials, and

doing the same job. The ham radio operator will not be distinguished from the Red Cross volunteer. If there's a problem, the Red Cross will take the heat. I don't think it's unreasonable for them to hold ham volunteers to some standard.

>>> If it finds itself short of volunteers, it'll likely wake up.
>> "Waking up", in the sense of not requiring the background check, isn't
>> an option.
>
> It certainly is an option. Whether the Red Cross thinks that everyone
> will bow to the idea is an unknown. Who is hurt if the Red Cross has
> a shortage of volunteer radio operators spending their own money?

The people who are hurt are the disaster victims. You seem to think that logic applies here. It doesn't. This is a political decision.

FEMA and the NGOs took a lot of heat for errors made in the Katrina response. One of those errors involved not adequately screening volunteers and suffering fraud because of it. I do not think that those errors will be made again.

Will this result in better service to the disaster victims? NO, most certainly, it will not. Every check that is put in place to prevent fraud will make it harder for legitimate victims to obtain the aid that they need. But that will not stop those checks from being made because the taxpayers demand a certain level of assurance that their tax money is being distributed to people with a legitimate need.

>> The background check has been mandated by all the publicity
>> related to fraud during previous operations.
>
> Were there any reports of radio amateurs being involved with fraud?

You're trying to invoke logic again. <grin>

Yes, I did run into a few radio amateurs during the Katrina operation who were not mentally stable. Fraud? No. Irrational behavior? Yes. Would a background check have had any effect? I don't know. It MIGHT have kept them at home. Or not.

One more comment, only peripherally related to background checks. This is specifically aimed at _national_ disasters, not local ones where local credentials are used. I am afraid that Katrina was the death knell for just showing up and being put to work. The agencies -- be they non-governmental or official -- are likely to be much more picky about who they press into service. An FCC license or an ARES membership card may not mean much, and you are likely to have to submit to a background check before being able to participate fully in the operation. Maybe I am completely wrong, and the need for qualified people will trump the need to screen out the crooks. Time will tell.

> The Red Cross is not the only factor though. One can work with local,
> county or state police, with the Salvation Army with any number of

> other non-governmental organizations. I used to belong to the
> Northern Kentucky Amateur Radio Association. It did respond to the
> Red Cross. My local ARES group here does not.

You're right. It depends on the disaster and what role you want to play.

In a national disaster, the Red Cross is mandated by Federal law with the Mass Care component. They run the shelters, including regulating health and welfare traffic. They handle disbursement of disaster aid funds. They do the damage assessment.

But they don't have responsibility for the EOC. So depending on the mutual-aid arrangement that got you into the disaster, you might have nothing to do with the Red Cross. But as I mentioned above, the agency you're working for may have their own requirements in place.

> We have the HF amateur bands through international treaty. We don't
> risk losing them through lack of public service participation. The
> percentage of radio amateurs who regularly participate in ARES or

The ARRL continues to lobby in DC, and they need ammunition for that lobbying effort. I don't see them talking to a Senator and saying, "We need these political concessions so that hams can sit on their butt and chew the fat with their buddies." I think "We provide a public service" is likely to have a better effect.

> We American radio amateurs have free licenses and a great deal of

I wish that I had a better feeling that current US hams were doing that. My personal method of achieving the goal involves public-service activities. I'm certainly not saying that that's the only way to justify the hobby. One of the things that makes ham radio great is that it has so many different aspects.

"Background check" sounds too intrusive. If it is a criminal records check,
than say "criminal records check."

>

Often we use our own frame of reference to judge the actions of others.
Perhaps some of those mentioned above might have a different view of your
actions than you do. Perhaps to some of them, your actions might be deemed

to be 'irrational'; not saying that is the case at all. A criminal records check will not uncover that kind of behavior unless it is related to some offense. A full blown background check, where neighbors are interviewed, might uncover it but it is not likely.

All good questions which is why I came to the group for advice.

Don't have the antenna(s) yet.

I am looking for a "more robust" design that will tune almost anything, an
automatic tuner rather than a manual one, and don't need switching between
multiple antennas.

> wasteful analog and cw communications.

I would disagree. Those modes are not wasteful. On the other hand, a vision of using the HF bands for data transmission would indeed be a way of filling up our bands pretty quickly, and for not a lot of gain. If I'm interested in Data Transmission, I would design a system for frequencies where there is less natural noise - VHF and up. Then bandwidth issues would be less of a problem too.

> Let's face it, digital voice is the only way to go.

I would disagree. What I have seen in digital voice so far offers no particular advantage over SSB, unless we are talking about digital for it's own sake. Most schemes that I have seen have some fatal flaws, such as the received transmission must be received in toto - IOW if you don't catch the beginning, you don't catch anything. The solution to that would be channelizing HF, or assigning specific frequencies to Digital voice. In addition, unless there have been some big advances recently, Digital voice does not have any particular bandwidth advantages.

Give me a Digital voice mode that I can tune across the band and pick up a conversation at any point in the transmission, and a 1 KHz or less bandwidth signal, and then I'll be interested. And of course, I'll need to see that some other folks are buying the digital radios too, so I'll have people to talk to.

> PSK is too slow for
> data transmission of LARGE and multi-megabyte amounts of data, end of
> story.

As for PSK, you are correct that it is too slow for data transmission. But that little 31 baud signal was never intended for Data transmission. It was intended for correctable text at a rate that a reasonably proficient typist could tap away at the keyboard in real time. Also a mode that can be efficiently operated at QRP and lover levels. And for that, it is an excellent mode.

It still is. We now have Echolink of course, where repeaters are linked via the internet (over a phone line of course) but direct connection with the PSTN is still forbidden.

As far as emergency service work goes, we have RAYNET (Radio Amateur Emergency Network) but that has IMHO degenerated into little more than helping with organising parades etc. which is why I got out of it many years ago. If there's a genuine emergency somewhere then I'll be happy to assist in whatever way I can, but I have no desire to stand around on street corners watching marathon runners.

BTW we now have a lifetime licence here, which means no more renewal fees (I suspect the dwindling numbers mean it's not worth collecting) but you do have to confirm that you are still active every 5 years.

Sorry, but I'm one of those. I *don't* have time, I have a full time job and I volunteer for an animal rescue charity at the weekends, plus all the normal family/household things that most people do. Besides, what training is necessary to pass radio messages..? Don't we already know how to do that..?

Or am I missing something..?

I'm just curious . . .

How do you accomplish this confirmation? What happens if you don't?

I get the impression that this is functionally equivalent to the US license in which we must renew (but every ten years now, instead of five). There's no fee for renewal and it can be accomplished in a few minutes using the FCC web site.

My experience in actual disasters suggests both good news and bad news
in this regard.

Bad news: Yes, you're probably missing something. Knowing how to pass
radio messages is a valuable skill, but it doesn't translate directly to
the kinds of tactical communications required during a real event.
Having trained with your local group can be a big help, both in terms of
honing specific skills, getting familiar with the local people so you
work better as a team, and forging relationships with the local agencies
that you're going to work with in the actual disaster.

Good news: During the Katrina operation, I worked with a team of hams
who had never met each other until we were thrown together in
Mississippi. Experience and training ran the gamut from decades to
minutes. We were able to meld into an effective operation and provide a
much-needed service. Some in the group had a lot of training and
experience that they shared with the rest of us. Most hams are fast
learners and the basic experience of using the radio is valuable.

So in the best of all worlds, everyone would have had training. In this
world we live in, I understand that it's simply not possible for
everyone, either because of time constraints or because there's no
organized ham radio group in the area.

My comment was actually aimed at a tiny minority of hams who show up on
site and become a part of the problem rather than a part of the
solution. These people do exist, even in the ham radio fraternity.

It's only just been introduced this year, I received mine a few weeks ago.
It can be renewed in the same way as yours via the web, or of course by
post. If you don't, the licence is revoked and the call will be cancelled.

Well.. If truth be told, I knew in advance about the restrictions. However, this was *only* because I asked. CCNR's are not normally disclosed in total prior to writing a contract on a house. Your only indication that there *might* be CCNR's is that you are told that there is an HOA who collects dues and how much the dues are. In my experience, if you see HOA dues, you should assume the CCNR's restrict antenna installations. And walking away from your contract will cost you the earnest money if the reason is that you found the CCNR's too restrictive.

My complaint here is that the CCNR's are all boilerplate and just about 100% of the builders in the area I live have their standard CCNR's that they file before they start building. If you want to buy a house built in the last 5 years or so, almost 100% of them will have CCNR's that restrict antenna installations that are visible from any other lot or the street. Almost 100% of houses are built by builders who's standard operating procedure is to file boiler plate CCNR's before they even subdivide the land and start building roads.

Further, it's next to impossible to change these agreements. Legally, you have to get 100% of the lot owners on the original land that the CCNR got enacted on to agree to modify the agreement. (Can you say herding cats..) You cannot even go to the HOA and get an "agreement" here, because if they choose to not enforce the CCNR the guy next door has the right to take you to court himself. In fact *anybody* in the neighborhood can.

CCNRs have their place, and I understand that. How else would you get folks to pay for the community pool. But, I believe that there is a vested interest in the pre-emption of these agreements in a few more cases than the FCC has chosen. Amateur Radio being among these few cases.

Aside from writing my congressman and advocating that others with my same views do the same, what else can one do? The last house bill got introduced and quickly referred to a committee where it died. How can we get it out of that committee with a recommendation that it be passed?

The FCC in it's latest ruling on this specifically states that if the Congress tells them to do it they will expand PRB-1 to include CCNRs for ham radio. How do we get Congress to do that? After all, there are but 600K or so hams who one could argue might be interested in this, and few others outside that group who would care.

I actually think this is as important as the spectrum protection stuff we do. Spectrum doesn't mean a thing, if you cannot build an antenna to use it.

Legally, it is not a contract unless you agree to it.
What would happen if you simply crossed out the antenna
restrictions clause before signing the contract?

Ivor,

We're all too busy these days: I'd guess that the rest of the world said goodbye to the 40 hour work-week at about the same time as those of us in the U.S. Both parents working, kids in day care, constant juggling: it's a familiar story.

But -

Drills, especially large ones, are the _ONLY_ way to prepare for the mass confusion, conflicting agendas, egomania, short tempers, long waits, and broken radios that hams must deal with during a deployment. Those who don't prepare _are_ a part of the problem: however well-intentioned an operator might be, (s)he will bring a set of expectations and capabilities to a response which only training can shape.

On my first deployment, I brought a massive backpack, which included almost nothing I later needed and almost everything I didn't. The drills that I attended after that did little to hone my radio skills, but a lot to make me ready to use them, quickly and effectively.

In short, time is the currency of the realm in disaster response: it's the _only_ item that can't be bought, fabricated, fedex'd or helicoptered into a disaster. However well-intentioned a ham may be, if (s)he's not trained and in practice, then it takes time to get him/her up to speed, and that's time that's better used for other things. Those of us who must choose to spend our time in other activities - there is,

of course, nothing wrong with that - can best prepare for disasters by getting ready to help from our own QTH: there are, after all, always two ends to any radio circuit.

Bill
P.S. There's are a lot of old sayings in the business: here are some I've found inspirational -

"Always Arrange Agreement in Advance"

"Bring Basics: Bandages, Bedding, Bottles, Batteries, Beans"

"Proper Planning and Practice Provides Peak Performance"

"Water, Wind, Waves, and Weakness Won't Wait".

P.P.S. I'd bet there isn't a single question on any ham exam in the world that asks how much toilet paper to bring to a deployment; Q.E.D.

WORLDBEAT: YI1DZ CLAIMS IRAQ HAS BANNED HAM RADIO

Amateur Radio operation has been banned in
Iraq That is a claim made in a letter to the
world-wide ham radio community from Diya
Sayah,YI1DZ and distributed by Ian Abel,
G3ZHI Bill Pasternak, WA6ITF, reports:

--

In his note dated March 13th, Iraq Amateur Radio
Society President Diya Sayah, YI1DZ, says that he
received confirmation from the office of Prime
Minister Al Maliki that all Amateur Radio
activity in that nation is to be closed down
immediately. This includes operation by Iraqi
nationals, foreign visitors and even members of
the coalition forces safeguarding that nation.

Thinking the note may have been a mistake, YI1DZ
made contact with Iraq's Ministry of Higher
Education and Scientific Research. Its reply was
to confirm that all ham radio in Iraq was to
cease operation and that hams would not be
permitted to return to the airwaves until that
nations security has been stabilized. As to how
casual Amateur Radio contacts made for
recreational purposes could be a danger to the
stability of Iraq's government -- this was not revealed.

Interestingly, Sayah's letter seems to blame the United States and Great Britain for Iraq's new ban on ham radio rather than the administration that imposed it. It says and we quote as closely as we can: "Congratulations to Mr. Bush and Blair for this freedom and democracy brought to a new Iraq and the new strategy to impose the law. If you think you can support Amateur Radio in Iraq , you need to talk to the creators of democracy and freedom."

The writers words, not ours.

More on this as we get it. For now, I'm Bill Pasternak, WA6ITF, at the studio in Los Angeles, Fred.

--

No word on how long ham radio operation will remain banned in Iraq. YI1DZ note does allow for a possible misunderstanding on the part of government officials as to the nature and purpose of Amateur Radio. You can read the complete text of the YI1DZ letter to the ham community on the home page at www.qrz.com (G3ZHI, QRZ.com, others)

**

RESCUE RADIO: SEVERE WEATHER PUTS AMATEUR RADIO VOLUNTEERS TO THE TEST IN 3 STATES

Back in the United States, tornadoes and other severe weather on March 1st prompted activation by Amateur Radio Emergency Service and SKYWARN volunteers in Alabama, Georgia and Missouri. This, according to the ARRL Letter which says that twenty people died in the three states, including seven in Alabama.

ARRL Alabama Section Manager Greg Sarratt, W4OZK. said that tornadoes wreaked extensive property damage in the affected communities. Sarratt said that Amateur Radio operators all across the state were busy tending to the massive severe weather outbreak. At week's end, Sarratt had informed the ARRL that Enterprise and Coffee County Emergency Coordinator Jim Garrison, KL0LN, and local amateurs were still at the Enterprise E-O-C assisting the local emergency management agency and the city with recovery efforts.

In Georgia, ARRL Section Traffic Manager Charles Pennington, K4GK, said the Georgia ARES Net activated during the afternoon of March 1st and continued into the wee hours of March 2nd. This,

as a series of severe weather watches and
warnings were posted there. Several tornadoes
were reported, scattered mostly through central
and southern Georgia. Georgia ARES stood down
March 2nd but remained on standby if needed during recovery operations..

In Missouri, Section Traffic Manager Dale
Huffington, AEZ0S, cited many reports of
activation March 1st on the 75-meter phone
net. Amateurs in over half of Missouri's ARES
districts reported activation due to the storm.

In Howell County, in south-central Missouri, , a
tornado was blamed for the death of a
seven-year-old girl. An ARES net activated in that area.

In Boone County, in central Missouri, ARES teams
activated at the request of the Joint
Communications Information Center. Ten weather
spotters including Missouri Section Emergency
Coordinator Don Moore, KM0R provided real-time,
ground-level weather observations to supplement
the National Weather Service radar in Kansas City and St Louis. (ARRL)

RESCUE RADIO: ELT DOWN IN THE DUMPS

New Zealand's Radio Spectrum Management Hamilton
Office was recently called out to locate
interfering signals affecting emergency
frequencies. Jim Meachen, ZL2BHF, has more:

--

From the outset, New Zealand's Radio Spectrum
Management searchers kind of figured that they
were hunting for a wayward Emergency Locator
Transmitter. A helicopter had already traced the
signals, which were coming from a landfill
outside Paeroa. Now it was time for the dirty work to begin.

Using the latest global positioning technology
together with a negative gain antenna, an area of
interest on the far side of the landfill was
selected. After each grab by a back hoe digger,
the area was checked to ensure the transmitter
was still operational. On the fourth grab, the beacon was unearthed.

Markings on the outside indicated that it could
have been 20 years old. The on/off and test
control had been lost in the landfill. The Radio
Spectrum Management inspectors removed the

batteries to stop it from transmitting. All agreed that it was another job well done by New Zealand's Radio Spectrum Management in action.

In Auckland, I'm Jim Meachen, ZL2BHF

--

New Zealand's Radio Spectrum Management group regularly deals with similar scenarios involving distress beacons. They and other administrations urge all users of these devices to ensure that batteries have been properly removed prior to disposal. (WIA, NZART, others)

ENFORCEMENT: SALE OF MODIFYABLE CB SETS BRINGS $7000 FINE

Call this one the case of the C-B Radio retailer who did not know to quit while he was ahead. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

The FCC says that Ben Metzger owns 1 Stop Communications also known as the 1 Stop CB Shop in Titusville, Florida. The regulatory agency also says that on March 21st, 2006, the Commission's Tampa Office issued Metzger and his store a Citation for marketing non-certified CB transceivers. This included Connex models 3300, CX 3300HP, CX 4400HP as well as Galaxy models DX44 and DX88HL. This says the FCC is a violation of Section 302(b) of the Act and Section 2.803(a)(1) of the Commissions Rules.

In a response dated March 31st, 2006, Metzger stated that the models listed in the Citation were Amateur Radio Service radios. He claimed that they not require type acceptance. On May 11th of 2006, the Tampa Office responded that the models were intended for use on CB as well as Amateur Service frequencies because they have built-in design features which facilitate their

operation on CB by the exercise of simple, end-user accessible modifications. Accordingly, the letter advised, such devices are considered CB transmitters irrespective of any labeling purporting the devices to be "Amateur Radio Transceivers."

In his response dated May 16, 2006, Metzger stated he removed the Connex and Galaxy radios mentioned in the Citation from his store. On June 6, 2006, the Tampa Office received a letter from his attorney, which requested that the Citation be withdrawn, again insisting that the radios were marketed and sold as ham gear, not CB radios. The FCC refused to withdraw the Citation.

But it was not over yet. A few days later on June 22nd of 2006, agents from the Tampa Office revisited the 1 Stop CB Shop. There they observed a "40 Channel" Connex CX 3300HP transceiver along with other uncertified radios in the display case. The Commission's Office of Engineering and Technology had previously tested Connex models very similar to the CX 3300HP and determined them to be non-certified CB transceivers.

The agents inquired whether this particular Connex could operate on both CB channels and amateur bands. Metzger reportedly stated that there were easy directions on the Internet which show how to modify the radio to operate on CB. He also stated that he could easily modify the radio to operate on the CB channels for a small "tune-up" charge.

The agents paid him for the radio and the "tune-up." Mr. Metzger handed them the modified Connex CX 3300HP transceiver about 20 minutes later and then demonstrated how to use the different toggle switches on the radio to switch from the amateur band to the different CB channels. The agents later determined that the modified Connex radio was capable of operating on frequencies from 25.615 MHz to 28.305 MHz with an output power that varied from 2.4 watts to 15 watts.

On December 12, 2006, the Tampa Office issued a Notice of Apparent Liability for Forfeiture to Metzger in the amount of $7,000. This, for the apparent willful and repeated violation of Section 302(b) of the Act and Section 2.803(a) of the Rules.

Metzger responded with a letter requesting cancellation of the proposed forfeiture. In it

Metzger states that he sold the agents a Connex CX 3300HP ARS radio, which he still maintained does not require FCC certification.. He claimed that if he modified the radio to operate on CB frequencies after selling it, a point which he does not concede, such action does not violate the Rules. Metzger also claimed that being fined for selling an easily modifiable piece of gear that he says is for ham radio use violates due process.

But the FCC sees things differently. In its February 28th order, the agency says that it has examined Metzger's response to the N-A-L pursuant to the statutory factors and in conjunction with the Forfeiture Policy Statement. . It found that based on the evidence before it, Metzger apparently willfully and repeatedly violated Section 302(b) of the Act and Section 2.803(a) of the FCC Rules by offering for sale non-certified CB transmitters on March 21, and June 22, 2006. And as a result of this review it no basis for cancellation of the proposed forfeiture and the $7,000 fine stands.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

Metzger was given the customary 30 days to pay. If he fails to do so, the FCC says it can turn the matter over to the Department of Justice for collection and follow-up. (FCC)

**

ENFORCEMENT: BROOKLYN UNLICENSED BROADCASTER FINED $10000

An unlicensed broadcaster in New York has been hit with a rather stiff fine by the FCC. Jim Davis, W2JKD, tells us who and how much:

--

The FCC has fined Elroy Simpson of Brooklyn, New York $10000. This for willfully and repeatedly violating Section 301 of the Communications Act by operating an unlicensed radio transmitter on the frequency 102.3 MHz.

On November 8, 2006, the Commission's New York Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 to Simpson. This, after tracing the unlicensed broadcast transmitter to him.

To date, Simpson has not filed a response to the N-A-L. Based on the information before it, the FCC has now affirmed the forfeiture and given Simpson 30 days to pay. . If the forfeiture is not paid within the period specified, FCC says that the case may be referred to the Department of Justice for collection.

--

This is just another in a long series of fines recently handed down against unlicensed broadcast operations all across the United States. (FCC)

**

RADIO RULES: REQUEST FOR STUDY OF BIRD TO TOWER CRASHES

Broadcast and tower groups are joining with wildlife advocates. This, in calling on the FAA to look into whether the use of steady red obstruction sidelights can be safely eliminated. The move is a development in recent discussions over the long-debated migratory bird question and whether these lights are a major contributing factor in the deaths of thousands of migratory birds each year as conservationists claim. (CGC)

**

TELECOMMUNICATIONS LAW: MICROSOFT VS. CYBERSQUATTERS

Microsoft has decided to get tough with those illegally using its name and logo. Don Wilbanks, AE5DW, reports:

--

Microsoft has filed two lawsuits against so-called cybersquatters who use the company's product names to profit illegally from online advertising. The world's largest software maker said the explosion in online advertising in recent years had given rise to the illegal registration of Web site domains containing trademark Microsoft phrases or common brand name misspellings. With billing for the ads determined by number of clicks, such sites can drive up traffic and, ultimately, ad revenue.

--

No word as to who will be first to get dinged by a Microsoft powered lawsuit. (Published reports)

**

HAM RADIO ON THE NET: REC.RADIO.AMATEUR.MODERATED IS CREATED

A new, moderated discussion newsgroup for Amateur Radio has been Created on Usenet. It's title is rec.radio.amateur.moderated and as its name suggests, safeguards are in place to preclude junk posting, feuds and personal attacks.

As the group is brand new some Internet Service Providers may not have it listed as of yet. If your I-S-P does not provide access to it or to the Usenet newsgroups, you can also read and post to this new ham radio moderated newsgroup at the Google Groups Web Site. Just go to www.google.com and then click on the word more then on the word groups. The type rec.radio.amateur.moderated in the find group dialogue box. (K3FU)

**

HAM RADIO ON THE WEB: 60M WEB PAGE FOR DXERS.

Ton Colyard, K4MM, has created an interesting Web page for 60 meters operators looking for DX. The site lists stations that have been active on this new band and also lists upcoming operations. Its in cyberspace at http://60meters.info (Via e-mail)

**

DAYTON HAMVENTION RTTY FORUM.

Shelby Summerville, K4WW, in Louisville says that the 2007 Dayton RTTY forum will take place on Sunday, May 20th, from 10:15 to noon. The venue is the Hara Arena, in Meeeting Room 2.

This years speakers will include Ken Wolff, K1EA, and Ed Muns, W0YK. Wolff will discuss log checking, and distinguish between myth and reality. Muns will give ideas of efficiently improving RTTY contesting. Time permitting, there will be a question and answer session following the presentations. (Via e-mail)

EMERGING TECHNOLOGY: CHANGE A BULB AND SAVE THE ENVIRONMENT

A new coalition is urging everyone to throw away
incandescent light bulbs and go modern to help
save the environment. Burt Hicks, WB6MQV, has more:

--

A coalition of private companies and government
agencies is launching a grass-roots marketing
campaign to persuade more Americans to help
combat global warming by using Energy efficient
light bulbs. Backers of the 18 Seconds movement
include the U.S. Environmental Protection Agency,
the Department of Energy, U.S. mayors, retailers,
religious organizations and conservation groups.

The campaign's goal is to increase awareness of
energy-efficient light bulbs as a way to slow
global climate change. Organizers say that If
every American swapped just one bulb, the country
could save $8 billion in energy costs and
eliminate 2 million cars worth of greenhouse gas
emissions. The campaigns name is based upon
thre average time it takes to remove an
incandescent lamp and replace it with one that's more energy efficient.

NAMES IN THE NEWS: NAB HONORS LOUIS KING, PE

The National Association of Broadcasters has
named Louis King, chairman of Kintronic
Laboratories, as the recipient of its Radio
Engineering Achievement Award, to be presented

during the upcoming NAB2007 convention. The NAB says that from the time that he built his first crystal radio to the receipt of his amateur radio license, Louis King was destined to make his mark on the broadcast world. And says the NAB, he did.

It was here in the early 1950's that King started manufacturing AM broadcast antenna systems and components. That lead to his establishing Kintronic Laboratories which today is an RF equipment manufacturer with customers in all 50 states and in over 100 countries,. King still serves as its Chairman of the Board. King is a life member of the Institute of Electrical and Electronics Engineers. (NAB)

WORLDBEAT - BELGIUM: AMATEUR RADIO EXHIBITED AT EUROPEAN PARLIMENT

"Amateur Radio, a European Resource" was the title of a short term exhibit set up for a week at the European Parliament, Brussels Belgium. It was inaugurated at a special ceremony on Monday March 5th with about 100 guests in attendance.

The display consisted of five self supporting panels each of which represents a specific aspect of amateur radio. Among the items shown were emergency activities, space communications, the training of the youth, careers directly influenced by amateur radio and even an area dealing with personalities who are radio amateurs. Several additional posters told onlookers whom hams are, why the service exists and what we do.

The Exhibition was installed Friday March 2nd and removed March 9th. The president of IARU Region 1 along with several presidents and vice-presidents of national societies were on hand for the exhibits grand opening.

**

WORLDBEAT - AUSTRALIA: FREQUENCIES RESERVED FOR DRM

Meantime, down-under, Australia's radio regulator is preparing for the introduction of Digital Radio Mondiale transmissions. Again, from Auckland, heres Jim Meachen, ZL2BHF:

--

The Australian Communications and Media Authority has placed an embargo on frequencies and bands

potentially suitable for use by digital
broadcasting services using Digital Radio
Mondiale. These bands are outside the spectrum
used by traditional broadcasting services.

The frequencies involved are 5.950 to 6200, 7.100
to 73.00, 9.500 to 9900, 11.650 to 12.050, 13.600
to 13.800, 15.100 to 15.600, 17.550 to 17.900,
21.450 to 21.850 and 25.670 to 2.6100
MHz. The ACMA will consider applications for
the licensing of trials to investigate the use of
these bands for Digital Radio Mondiale operations.
--

No word as to when the spectrum study will be completed. (WIA News)

**

WORLDBEAT - CUBA: CONGRESS TO SCRUTINIZE RADIO MARTI

The Miami Herald reports that a congressional
committee now led by Democrat Representative
William Delahunt of Massachusetts plans oversight
hearings into Radio and TV Marti. This, amid
allegations of mismanagement of taxpayer money.

According to the news account the Oversight and
Investigations Subcommittee of the House
International Relations Committee will hold the
hearings. Radio and Television Marti are United
States propaganda stations that beam news and
other information to communist dominated Cuba. (RW)

>to do. The thing that I object to is the folks who say that they don't
>have time to participate in training, but "I'll be there if you need me
>in an emergency."

I'm reminded of a comment made by Bart Lee KV6LEE, who happened to be
in New York City on 9/11 and served as the night-shift amateur radio
communications coordinator for the first few days of the incident.

He said,

"You may know the saying 'In a crisis, you'll rise to the occasion.'

It's not true.

You'll sink to the level of your experience."

I agree - if you intend to be of real use in a crisis, you need to
drill and practice on the skills and techniques that you'll use when
the fewmets hit the ventilator, so that they're as close to second
nature as possible.

Organized comms-and-crisis training is surely the best way to go.
Doing comms for public-service events isn't quite the same, but I
think it's distinctly better than nothing.

Doing _other_ things, like handling parking at public service events,
would seem to have little training benefit. That's not to say that
hams shouldn't accept such jobs... but they should probably consider
themselves to be doing so just as J. Random Volunteer, not as a ham
per se, since what they're doing has nothing to do with their
particular specialty.

>
>That's impressive. It's just about as opposite from our situation here
>as it could possibly be.

My county (Santa Clara, CA) is fortunate enough to have a very well organized ARES/RACES setup, which is valued by the county and by most of the cities... and I have the good fortune to be in a city with an a topnotch ARES/RACES EC and an excellent relationship between the ARES/RACES hams and the city emergency manager. Lots of training, both within the city, and at the county level (trained and city-nominated hams are signed up by the county as Mutual Aid Communicators, and can be formally activated to provide inter-city support). It's a very impressive setup (to me, at least) with a lot of thought and effort behind it.

I still participate as a communicator in PSEs, though, both to help keep my skills up and because it's usually a lot of fun.

Part of what has forced a degree of formalism (dare I say "professionalism" w/r/t "amateur" radio?) is the whole issue of liability and insurance coverage for hams who have been formally called out by their city or by the county. In order to receive California Disaster Service Worker coverage, the hams must be formally activated by a suitable authority, and *must* be qualified for the duties for which they are being activated.

Our county AEC is very clear about the limits: he's instructed his MACs that he does *not* authorize them to perform certain types of duties or to follow officials to which they are assigned into physically dangerous locations, because the MACs have not received adequate training in those areas (e.g. fireline training). He (and the city ECs) have also made it very clear that their ARES/RACES hams are *not* to "self-activate" if they perceive an emergency - they are to contact their EC or other authorized official and await formal activation.

One of the responsibilities of almost any professional is to have a clear understanding of his/her "scope of practice", and to be willing to say "What you're asking me to do is outside my scope of practice, and I must decline." Hams who want to help out in emergencies need to be equally professional, I think.

As Harry Callahan said, "A man's got to know his limitations."

Part of the problem with people who haven't participated in training is a twofold issue: they may not know their limitations, and the

people they're working with won't know those limitations either. If a guy you've never seen before shows up in an emergency with a radio and an offer to help, you have no way of knowing whether he's $DEITY's gift to emergency comms, or a loose cannon with a lit fuse.

Around here, unaffiliated hams who show up in a crisis will be treated just like any other "convergent volunteer" - they'll be referred to a centralized volunteer center (there are two such in the county), interviewed, and (if apparently qualified enough to be useful) may be signed up as DSWs and put into _supervised_ service (e.g. sent out with another, trained ham). Such convergent-volunteer hams will *not* be put into solo, standalone service as part of an activation until their level of training, behavior under stress, etc. have been evaluated in the field.

>> I seem to recall the word "financial", coupled with the words
>> "background check".
>> Am I mistaken?
>

>information on the ARRL web site had not been updated.

Yeah, the latest version is still unclear... the Red Cross says that they won't actually *do* such a check, but the private company they've contracted the checking to *does* insist that the person being checked give a very-wide-range authorization for checking which could include financial and "lifestyle" checks.

>> I think I'd have a problem with that. The FCC has issued me an

>correlation between having an FCC license and passing a background
>check. I'd like to think that all licensed amateurs are honest
>upstanding folks, but I know that's not true.

Our city, and the county, and many of the other cities here in the county have a background-check requirement for anyone who is going to be granted physical access to secure or sensitive areas. For instance, my city's ARES/RACES hamshack is in the Police and Fire Admin building, literally one (unlocked) door away from the 911 dispatch consoles. The ARES EC and AECs have been given ID cards which unlock the outside building door... we don't even have to pick up the phone and buzz for access. There's no way that the city would authorize access to this sort of area to unescorted hams, without at least a basic background check. Hams can sign up for ARES

and participate in the weekly nets without going through such a check,
but in order to be listed under RACES and make themselves available
for formal activation they have to be checked.

In our case, the check is a "Livescan", which includes a "wants and
warrants" check and fingerprinting. No financial/lifestyle check.
The county's rules are similar.

I understand that the county is trying to negotiate an MOU with our
local Red Cross organizations, in which the Red Cross would accept any
ham who had been through a city or county background check without
further huhu. This sort of arrangement would seem to be implied in
the original Red Cross announcement, which spoke of doing background
checks for anyone who was coming in from an organization which didn't
already do such checks, so with a bit of luck it'll be formalized
hereabouts before too long.

I think that the big hassle w/r/t the Red Cross announcement, is that
they subcontracted the checking out to a company which has (so far)
insisted on having only a single level of "OK, check me out!"
authorization - one which is rather more invasive than the Red Cross's
criteria would require.

>For one thing, you are likely to be issued Red Cross credentials. This
>implies a level of responsibility for the Red Cross.
>
>Also, you're likely, as a communicator, to be in very sensitive
>locations like the EOC or in service centers in close proximity to

>they need. But that will not stop those checks from being made because
>the taxpayers demand a certain level of assurance that their tax money
>is being distributed to people with a legitimate need.

Agreed. It has become a political necessity... I have to admit that,
as little as I like the idea and the invasiveness and the bureaucracy.

>Yes, I did run into a few radio amateurs during the Katrina operation
>who were not mentally stable. Fraud? No. Irrational behavior? Yes.
>Would a background check have had any effect? I don't know. It MIGHT
>have kept them at home. Or not.

Or might, at least, have helped keep them in areas of lower stress
where their behavior could do less damage to the disaster work.

>One more comment, only peripherally related to background checks. This
>is specifically aimed at _national_ disasters, not local ones where
>local credentials are used. I am afraid that Katrina was the death
>knell for just showing up and being put to work.

As far as hams go, in a lot of cities, the idea of "just showing up
and going to work" fell into disrepute quite some time ago. I've
heard several stories about how a few "bad apples" in the ham
community, showing up at disasters and getting in the way, were enough
of a problem to cause the city to kick *all* the hams out of the area
and the process, and (in effect) declare hams to be "persona non
grata". This sort of damage can take years, or even decades to
repair.

A big part of the training and background-check process (and having
this be visible to the cities, counties, Red Cross, etc.) is to
reassure these organizations that the hams who they're dealing with
are going to be assets rather than liabilities.

>is necessary to pass radio messages..? Don't we already know how to do
>that..?

Some do. Some do not. It does not come naturally.

Chatting with someone on the radio, or making HF QSOs, is not
necessarily going to prepare you for passing formal or semi-formal
message traffic *efficiently* on a busy net, when you and everyone
else are under stress in an emergency.

Things like "listen before you transmit", "don't read the message
faster than you can write it", "pause and drop carrier after every N
words", "don't editorialize", "think of what you're going to say
before you press PTT", and so forth don't come automatically,
and it's disturbingly easy to forget them when under pressure. I
believe that's just as true for "quarter century" hams as it is for
the newly licensed.

A message-net (formal or otherwise) with well-practiced operators can
be a joy to observe. Just one or two untrained or out-of-practice ops
can slow things to a crawl.

My own experience, after five years as a ham and after dozens of
training sessions and drills, is simply this: training and regular
practice makes a huge difference.

I remember reading a comment by Vladimir Horowitz, some years ago,
about his piano practice. He said something to the effect of "If I
skip my scales practice for a day, I can tell the difference in how
well I play. If I skip it for two days, my wife can tell. If I skip
it for three days, everybody can tell."

Most hams won't even think to put it in there go kit.

Another clue, if going on a long deployment (subjective) take twice as many
socks as you think you will need and you will probably have enough.

> Legally, it is not a contract unless you agree to it.

Not only do *you* have to agree to it, but everyone
else involved has to agree to it as well.

> What would happen if you simply crossed out the antenna
> restrictions clause before signing the contract?

That depends:

IANAL, but this is what I've learned.

If the seller is the person who put the restriction on the
contract, and has the authority to remove it, then the
two of you (and all other parties involved) could agree to
remove the restriction.

But in many cases that simply won't work. Here's why:

Most deed restrictions and covenants are specifically
written to be self-perpetuating. There is usually a clause
which says that the restrictions cannot be removed by
future owners - including the restriction that says
restrictions cannot be removed.

In those cases, the seller does not have the right to
remove the restrictions. S/he agreed to give up that right
and to continue all the restrictions as a condition of the
sale when *s/he* bought the property.

So you could cross it out and sign it, and so could the seller,
but if it were challenged by anyone, it would not stand up. In
fact, you might be in trouble for attempting to alter an
official document.

Deed restrictions are written that way for a reason: they'd
be too easy to change without it.

For example, a friend of mine lives on a 1.2 acre lot. The zoning in
the area requires a lot size of at least 0.5 acre.
His house and garage are at one end of the property, and

he could easily slice off a half-acre at the back without violating any setback requirements. But a deed restriction dating from the building of the house prohibits the further subdivision of the land. So it's 1.2 acres essentially forever.

If we could get rid of deed restrictions and covenants just by crossing them out, why would we need PRB-1?

Indeed, this is exactly the situation we're in right now. Once someone in charge gets it in their head that hams are a problem, it is almost impossible to change their mind. In fact, the only reason we're now beginning to mend fences is that the personalities involved have changed.

Bill Horne, W1AC wrote:

> On my first deployment, I brought a massive backpack, which included
> almost nothing I later needed and almost everything I didn't.

I went to the Katrina effort with another ham from the area. We drove down in his Suburban, and the vehicles was completely full. We used almost nothing that we brought.

On the other hand, one of the other hams drove down in a similarly-sized vehicle that he had equipped after years of experience with disaster operations. It was almost uncanny how he had exactly what he, and the rest of us, needed. If we came up short, the answer was "Ask Al." and he invariably had what we needed and the knowledge to use it.

That's the difference that training and experience makes.

I wonder how many hams even _have_ a go-kit. Or even a list to create one when needed.

I forgot a particularly important item during a training exercise and realized that I needed to make an actual checklist for my go-kit. I was astounded to discover that it contained over 100 items. No, that's not a Suburban-full; it's one carry-on bag and a small rolling suitcase.

Actually not so on all points. The FCC did not use "PRB-1" in the
OTARD issue. They were commanded by The Congress to adopt regulations
to provide for OTARD, whereas PRB-1 was issued on the FCC's motion
alone. Secondly, the FCC has clearly stated several times that they
will not preempt private land use restrictions until and unless The
Congress mandates it, and they are taking their own sweet time in
doing so.

> In article <estinj$5s...@victor.killfile.org> billhorn...@comcast.not writes:

>
> In some cases, the regulations in CC&Rs are governmental requirements.

IANAL either.

But it's important to understand what "CC&Rs" really are.

CC&R stands for Codes, Covenants and Restrictions.

In general:

Codes refers to building codes, zoning codes, etc., which
are government regulations. PRB-1 directly affects them.
There are definite limits to government power, and those
codes can be changed, or a variance granted.

Covenants and Restrictions refer to things that are
essentially private agreements or contracts.

In many newer communities, particularly condos, at least
some of the land is jointly owned. This results in special
covenants/agreements as to how the community is run.
These can, in theory, be changed, but it usually requires
agreement of everyone in the agreement, and is almost
impossible to get.

Then there are deed restrictions. These are conditions
that attach to the property itself. They are essentially a
contract between the seller and buyer. For example,
a deed restriction may be written to prevent further
subdivision of a lot by future owners.

The really insidious thing about most deed restrictions is
that many are written to be self-perpetuating. This is done
by including a restriction that says you can't change any
of the existing restrictions. IOW, when you buy the
property, you not only agree to abide by all of the
restrictions for as long as you own the property, but
you also agree to make the next owner agree to all of them
as well.

> FCC stepped into CC&R issues with broadcst TV antennas.)
>
> I asked why. The explanation was that the city required them to include
> those restrictions in order to get the permit to develop as they had.

In many newer developments, the developer seeks zoning changes, variances, tax relief, etc. Often they are gotten as part of a bargaining process, such as the developer installing and maintaining the roads and water/sewer mains, etc. The no-antennas clause may have been to get a higher density than would have normally been allowed, or some other variance.

> So, CC&Rs are not always private agreements.

It sounds as if, in your case, the restrictions were put in to make the city happy.

>restrictive.

Depends on where you are. In California and some other states, the seller's agent must produce the documentation of CC&Rs and HOA Regulations before the contract goes into effect, and I insist - for myself and my clients - that a clause be inserted into the contract that the buyer has a set time such as five days to back out with no penalty if there are restrictions on antennas or if the seller's agent fails to produce the above documentation to prove that there are no such restrictions.

When we were in the process if buying our house here in 1999, we didn't wait for the seller's agent -- we had our agent telephone her office to get the CC&Rs on every house that we were interested in (they are on file with the county recorder and can be obtained by FAX). There was one brand new townhouse that we really liked that really screamed "CC&Rs" but the search did not reveal any. I didn't trust the search, and we passed it by. We settled for our third choice, a 30-year old house that had CC&Rs but no HOA, and nothing in the CC&Rs would serve as a restriction to what I wanted to erect.

If a new market appears, use of various modes will change,
and the new market can propose rules changes to FCC.

If a new market really does emerge, such proposal will
be widely supported in the comments.

However, it seems to me that the "new market" may be
more of an illusion than a reality. We've had PCs in
hamshacks for a couple decades now, and yet the
popularity of analog modes doesn't seem to be declining.

I recall being told, 20+ years ago, that there would soon
be a national highspeed digital amateur radio packet
network using VHF and UHF that would turn HF into a
backup system. Never happened.

As for "wasteful analog and cw communications" - why do
you call them wasteful?

Can a real-time digital voice message be sent in the
width of an SSB voice signal and result in the same
effectiveness? (signal to noise, power requirements, lack of need to
synchronize, tolerance of interference and fading, etc.)?

Is there any non-text data mode (IOW, something you listen to rather
than look at) which can replace Morse Code?

Should AM voice be banned from amateur radio? How
about FM voice?

> Let's face it, digital voice is the only way to go.

Why? And which kind of digital voice?

Why can't there be a choice of modes - digital, analog,
old, new - available to hams?

> PSK is too slow for
> data transmission of LARGE and multi-megabyte amounts of data, end of story.

Not the end of the story at all.

Yes, PSK31 is too slow for large amounts of data - because
it wasn't designed for that. PSK31 was designed to be a
keyboard-to-keyboard mode that uses very little bandwidth and has
excellent performance with low S/N ratios. It was
meant as an improvement to FSK RTTY for such QSOs.

For real-time (live) QSOs, PSK31 is fast enough.
>

> decryption/de-compaction still needs to come forth to deal with HIGH
> transfer rates of digital voice and data transmission and availability
> to ALL hardware/software developers/manufacturers be assured to such a
> standard(s) ...

Yup. And that's the "who's going to tie the bell on the cat" question.
Who will come up with that standard?

That's the key question to the whole issue. Who is going to
do all that development work and then give it away free?
G3PLX and a small group did it for PSK31.
>
> Great care needs to exercised when proposing and developing acceptable
> schemes to the above, we certainly don't need to create a "tower of
> babel" by not having free access to algorithms and standard methods in
> common use--and free use and experimentation needs to be right up front
> and encouraged--this only holds with the tradition of amateur radio!

Agreed! And it's already been established as a tradition.
PSK-31 is a classic example. Everything about it is wide
open and free-for-the-download.

OTOH, Pactor 2/3 is not free at all.
Implementing it requires buying a
specific hardware modem that is rather pricey. Some may
say that $600 for a modem isn't much in the scheme of
things, but even if that's true, it's the principle of proprietary
methods that goes against the grain.

btw, there is a downside to all this digital stuff. With
'analog' modes, such as AM, FM, SSB and Morse Code,
anyone with a suitable receiver can hear amateur
communications as they were meant to be heard. Tuning
in SSB requires a specialized technique, and *understanding* Morse
Code requires learning a skill or

using a decoder, but all that is needed to receive them
is a suitable receiver. IOW, they're wide open.

With digital modes, the incoming message is incomprehensible without a
decoding device - usually
a computer. That creates a divide between those who
are equipped and those who aren't.

Some may think this is trivial in a world where computers
are all over the place. And perhaps it is. But it may not
be a trivial thing at all. In the days when AM voice was
the voice mode used by hams on HF, amateur radio
got a lot of new hams from folks who heard hams talking
on their 'shortwave' receivers. That source all but
disappeared when SSB replaced AM, because most
SWLs couldn't receive SSB. More recently, we've gotten
new hams from the ranks of the scanner folks, because
they could hear amateur FM repeaters.

Going digital would eliminate most of that.

IOW, watch out for the Law of Unintentional Consequences.

Hi,

I wouldn't expect ham numbers to climb dramatically but I would expect to see the Amateur Extra class increase in proportion so that it will be the majority of ***active*** hams, ie active hams seeking out the highest privilege level, this is typically what has happened in other countries that kept multiple tier licenses after 2003. Amateur radio growth is limited by the internet. We call relatives in Australia via Skype and don't think twice about it, the world is a smaller place and the excitement of radio contact is less.

That being said, I'm a new Extra and am just setting up a station.

As for the numbers, I passed my Extra on March 4th and I'm still a General in ULS, so be patient on the numbers.

Thank you for your effort.

Both the contract and state law says that you agree to all recorded
CC&Rs on file. Usually one of the CC&Rs is that you will comply with
HOA regulations. An individual buyer cannot modify such restrictions
unilaterally. There may - or may not - be a provision for modifying
them spelled out in the CC&Rs or HOA Regulations themselves, but that
usually requires a unanimous or super-majority vote of all those to
whom the restriction applies (lots of luck). The only other way is
that some states permit a homeowner to sue for a declaration that the
restriction is unreasonable and therefore unenforceable, but the
burden of proving unreasonableness is very high and is on the
homeowner seeking relief.

Covenants, Conditions, AND Restrictions = CC & R's, not CCNR's.

No, I don't think the Homeowner's Association is going to agree to a crossed out antenna restriction, even if the seller does. The seller does not represent the HOA. The HOA, however, *may* grant an exception if requested.

In all fairness, Yes and no. Did I know about the restrictions? Yes, however, unless I had asked about antennas, the only thing I would have been told was that there was a HOA and they collected dues to support the community pool. But, I really had no other choice at the time and don't really have one now. There simply are no similar houses in the area that would not have CCNRs where I could relocate to.

The problem here is that the CCNR's are not a contract between me and the HOA per-say, but an agreement with every other lot owner in the subdivision. This means I could go the the HOA and get an agreement to alter the CCNRs but my neighbor could still choose to enforce the CCNRs himself even if the HOA declined. The only way to change the CCNR's is to get *every* party of the contract (all 250+ lot owners) to agree. My only real option is a federal rule similar to PRB-1 and what it does for broadcast and data services. (or wining the lottery or finding some non-existent house w/o CCNR's that the XYL and I can live with..)

The review of DRM-based digital voice in this month's QST makes a
point of noting that both the WinDRM and hardware-modem-based systems
require a pretty clean, fade-free propagation path in order to perform
well. On less clean paths, they're prone to drop out... I infer that
as soon as the facing or QRM is severe enough to overcome the forward
error correction coding, you lose an entire packet.

I've heard of at least two groups who have been working on a PSK31-based
bulk data transmission system - both systems uses both forward error
correction and an ACK/NAK protocol structure. It's not intended for
megabytes of data, but for semi-unattended transmission of modest
amounts of data during emergencies. For example, basic health&welfare
traffic (queries and "We're OK, are in the shelter" responses) can be
entered via online Web forms, the fields converted to a compact
representation and heavily compressed, and then sent out in big
batches via PSK31 or a similar narrow-bandwidth mode.

The idea isn't to replace SSB voice (or CW net traffic) but to
supplement it, reducing the operators' workload and reducing errors.
It's certainly not intended as a substitute for broadband!

There was some work going on towards an open-source higher-speed
HF-data protocol a couple of years ago - SCAMP. If I recall correctly
it's based on OFDM (like DRM) with heavy use of forward error
correction. The last I heard of it, it had worked out well under
clean-pathway conditions, but wasn't working all that well under
noisy/fade-prone conditions and wasn't yet considered "ready for prime
time" or (as yet) a serious competitor to Pactor 2/3. Haven't heard
anything more about it in the last year or so - it's possible that
development has stalled.

>IOW, watch out for the Law of Unintentional Consequences.

a.k.a. "Oops!" :-)

My question on this is why would we be sending large amounts of data on
amateur radio? The need for it doesn't exist in general. If it did,
someone would have developed the appropriate digital mode by now.

hi

I was thinking about getting a very small radio to use backpack /travel portable

small size is what i am after but i also want more than flea power .(ie 20w) in fact 100 is my target. and all bands

i thought about the 897d it' a great rig has everything i need (all band but weighs a ton

the 857mobile rig or 100d might be a possibility

the sgc i believe is discontinued?

but wanted to see if anybody know of any other rigs out there i might have over looked

I can think of a couple uses for it, Dee.

First there's emergency/public service comms. The served agencies
are used to being able to send emails with sizable attachments through
the usual networks. A mode that would let them do that via amateur
radio
when the usual networks are not available would be a really good tool
in the emcomm toolbox. IMHO it's the thinking pushing WinLink.

Second, there are plenty of times in an ordinary QSO when it
would be good to be able to send a picture, station description,
article, a sound clip, etc. directly by radio, and have it in digital
format at the other end. In the past, such modes as SSTV have
gained limited acceptance because they required lots of extra
apparatus, but with the widespread acceptance of PCs today
the big limitation is software, not hardware.

> The need for it doesn't exist in general.

In some cases, if something is presented to people, they
will find a use for it. Look back on predictions about
computers - in the early '50s it was predicted that a half-
dozen or so general-purpose computers would serve all
the needs of the USA, and in the '70s it was said that no
ordinary person would ever need a computer in their home.
Both pronouncements were made by knowledgeable
professionals, and at the time seemed quite reasonable.

Of course "if you build it, they will come" doesn't always
work out.

>If it did,
> someone would have developed the appropriate digital mode by now.

I disagree. One of the big problems is that such development
tends to be protected by the developers, and *not* made
open-source. PSK-31 and Linux are exceptions, not the rule.

In the bad old days, the focus was on hardware, and the
idea of controlling a mode-concept wasn't taken too
seriously. SSB, FM, SSTV, RTTY, AX.25 packet,
etc., all came to amateur radio essentially as freebies.

The standard was widely and publicly
available, just meet it and go on the air.

But you can't homebrew
a Pactor 2/3 modem today the way you could homebrew
an SSB rig 50 years ago.

The "bell-the-cat" question is still *who* is going to develop
such new modes and then just give them away for free.
Groups that have tried (TAPR and the spread-spectrum idea)
have taken years without much to show.

All IMHO

This is where real estate differs from other purchases IMHO.
Unlike almost everything else, RE is in limited supply and not
portable. They're not making much more of it, either. Plus you cannot
buy what isn't for sale.

Most of all, RE is often a joint purchase that affects many
people, rather than just one. Getting family agreement is
the reality of most modern families.

KC4UAI does have some possible options besides those
listed:

1) Watch the RE ads and websites looking for a unrestricted
house - and be ready to jump on it if on does appear.

2) Look for brand-new developments, and offer to buy only
if the developer (who almost always is the one who adds
the restrictions) does not include the anti-antenna CC&Rs
on the house. It probably will not have an effect right
away, but after a while the developers might get the
message that they are losing sales because of the restrictions.

3) Save up for the dream house out beyond the restrictions.

4) Figure out ways to get a ruling like the OTARD one for
amateur antennas.

Erm.... Packet Radio..?!

I ran a packet BBS for 11 years, ok so it was slow (1200/9600 bd) but it was reliable and transmitted a *lot* of data (ok most of it rubbish, but what the heck..?!)

The SGC 2020 is discontinued, as is the Yaesu FT-100D

The 857 is essentially the same rig as the 897 without the battery pack,
once you add in a battery for portable use, the weight will be about the
same. One advantage of the 897 is that has bigger controls than the 857.

Personally I use a Icom 703 for portable work. 10 Watts is enough most of
the time.

Maybe - but I doubt it will happen.

Back in 2000 the FCC reduced both the written and Morse Code
testing. Anyone who held a Morse Code tested license could upgrade
to Extra with just some written testing - and the amount of written
testing was reduced too.

Yet here it is seven years later and several hundred thousand hams
hold General and Advanced licenses. Surely they aren't all inactive.
They just haven't gotten around to passing the written tests yet.

> Amateur radio
> growth is limited by the internet. We call relatives in Australia via
> Skype and don't think twice about it, the world is a smaller place and
> the excitement of radio contact is less.

I think that depends on why someone wants to be a radio amateur.

IMHO, there are three basic motivations to being a ham:

1) Operating radios

2) Messing around with technology

3) Communicating electronically

Most hams are motivated by a mixture of these three. Their
relative importance varies with the person.

There was a time when the average person's options for
electronic/electric communication were very limited. Those
days are long gone - not just because of the internet but
because of lowcost cell phones and long distance calling.
So those who are primarily motivated by 3) aren't going to
be hams any more.

But 1) and 2) are still going strong. The big difference is
that they represent the individual doing something that is
independent of a big commercial network. Being an

operator, not a user.

It's a bit like the difference between flying a plane yourself
and riding in an airliner. Both get you there, and the
airliner is almost certainly faster, safer and less expensive.
But it's not the same thing. Ask any pilot.

What amateur radio is really all about today is "radio for
its own sake". Radio as an end in itself, not a means to
an end.

> That being said, I'm a new Extra and am just setting up a station.

Congratulations and welcome! I hope to work you on the air.

> As for the numbers, I passed my Extra on March 4th and I'm still a

Yes, I agree that this is exactly what's pushing WinLink.

This is one of those areas in which I have very strong opinions both pro and con. It's almost like the devil on one shoulder and an angel on the other, each speaking into one ear.

On the pro side, it really makes a lot of sense in theory. If we hams could offer this kind of capability to emergency agencies, it would provide a much-needed communications capability in times of disaster. But it would need to be stand-alone and not depend upon repeaters that might be out of service, which to me implies HF.

On the con side, a real disaster is the worst possible scenario for trying to get this technology to work reliably. You're potentially in a high-noise low-signal poor-antenna situation. The equipment required is fairly complex, and you need a fair amount of technical knowledge to set it up. When I build a mental image of someone at a shelter trying to set up this gear, it's hard for me to see success. Finally there's the issue of what data gets sent; some of it probably is not appropriate for transmission using amateur radio.

> Second, there are plenty of times in an ordinary QSO when it

This one I find intriguing. I do think that if the capability existed, and did not require purchase of hardware in addition to a PC, that it

would be interesting to enough hams to create a critical mass. It provides an alternative playground for hams who prefer to experiment using the keyboard of their PC rather than their soldering iron.

"Because we can"

Actually, I agree that there may be no particular ongoing NEED for an Amateur Radio high volume data channel, but neither was there a NEED for LEOs, APRS, and similar "tinkerer" modes, many of which had their genesis in ham shacks and now have morphed into commercial applications.

I believe that the rules for Amateur Radio regulations should be loosened to the "least required to protect other spectrum users" with the intention to promote a renewed spirit of experimentation by hams.

Perhaps they would like to have such but IMHO, when the catastrophe is
serious enough and wide spread enough that hams are truly needed, that is
apt to be coupled with power source limitations that would make it unwise to
send such length attachments in many cases. Plain ascii text would be the
most useful and results in low file size. There are several modes that can
handle that. In addition, the power source limitations might make running
computers as well as radios an unwise choice in some situations.

>

Well I disagree with your disagreement. To me it seems that there are
enough hams that somewhere in that group are several people capable of doing
this it they deemed it worth doing. Then we would have modes and software
developed by hams for hams. Then there would be more likelihood that it
would be shared in the same manner as PSK-31. There is nothing stopping
anyone from doing that development other than lack of interest.

I think the problem with the spread-spectrum is that for ham radio
operators, the usefulness simply doesn't justify setting up to use it.
People want to get out there and find stations rather than having to have
pre-arranged schedules for everything.

If it doesn't seem useful to them, people will pass on it.

This occurs in all fields of endeavor. A person has a bright idea, packages
it, markets it, and it doesn't sell simply because the market doesn't

perceive any significant need for or pleasure derived from the product.

Another thing to keep in mind that as our infrastructure becomes stronger,
hams will only really be needed in the absolutely worst disasters. Not only
do you have the bad signal to noise ratio and poor antennas, you may be
power limited. People remark on the low power capabilities of PSK31 for
example but they are only looking at transmit power. You really need to
look at power consumption. That means adding in the computer/monitor combo.
One might actually be better off with voice.

I agree that the fun of it is the most probable driver. Yet SSTV has not grown as rapidly as one might expect when it became possible to do it all with one's computer.

In my opinion there is another motivator. To me, the main fascination is being able to communicate without the need for any infrastructure. All I need is my radio, the stuff to make a basic dipole, a source of power, and my mike or key. Nothing ties us together except the ionosphere. On top of all that, when conditions are moderately good, it can be done with relatively small amounts of power. i.e. It is the ability to basically do this independently.

That is how I view amateur radio. The concept is to develop something new and different not to try to integrate commercial developments into amateur radio unless it were necessary to use as a basis for that "new and different" development.

Good luck at being in the right place at the right
time when all other infrastructure fails. I've been
a coded ham for 55 years and have yet to use CW for
any emergency communications. The only HF emergency
communications I ever needed to use was CB.

I did not mention or imply anything to do with emergency communications or CW. I merely stated that the fascinating part was to be able to contact people without the need for an infrastructure. There is a feeling of independence from being able to, as an individual, communicate around the world.

I understand your view, Phil, especially coming from your long background in a regulatory environment.

But I think one of the failures of the FCC stewardship of Amateur Radio has been over-regulation.

Pause here, and refresh your mindset on the difference between "regulation" and "enforcement".

One of the bedrock 'values' of the Amateur Radio Service is experimentation and "advancement of the radio art", yet FCC has historically dragged its feet in allowing us the leeway to try unorthodox modulation schemes, new transmission modes, etc. (As an example, Canadian amateurs had AX.25 up and running for almost a decade before FCC would allow W/K guys to play in that mode.)

Paraphrasing Thomas Paine, "That government is best which governs least." I believe "that agency regulates best which regulates least."

Give us a sandbox to play in, make sure we don't trash the surrounding neighborhood, and let us play our game. Use enforcement, not over regulation, to make sure the public interest is served.

I think that emergency comms might make use of large amounts ot data
transmission, but the average ham needs to use the modes in order to
have the modes available during those emergencies. IOW, it's a matter
not of what I get for emergencies, but what Joe Ham is going to get
along with me so we can use it when there isn't an emergency. Otherwise
it isn't of a whole lot of use.

And then there is that old bugaboo of bandwidth. HF really isn't
the place for wide bandwidth modes.

..
>
> I disagree. One of the big problems is that such development

Our "hamness" tend to make us gravitate towards those open source
modes. And it isn't just my ceap tendencies. I've tried most of the
digital modes at least once. That would not have happened if I had
to pay for every mode.

> The "bell-the-cat" question is still *who* is going to develop
> such new modes and then just give them away for free.
> Groups that have tried (TAPR and the spread-spectrum idea)
> have taken years without much to show.

Often people will wonder why Hams don't run to every new mode that comes along. Some assume that we are not adaptable as a group. I would say it has a lot more to do with simply having someone on the other end to talk to. We need an early following to get the ball rolling, then there needs to be a good reason to use the mode. The difference between say Spread spectrum and say PSK31 is that PSK apparently serves some purpose for a growing number of Hams, and SS doesn't.

I agree. People often ask me why I use 2m & 70cm in the car, for example, when everyone (well, nearly everyone) has a mobile phone (cellphone for you US types..!). I always answer that you can't put a blind CQ call out on a phone. That's the attraction for me, you never know who might reply to a call.

Dee,

At one time I would put all that under "operating radios",
but I think you have hit on something that deserves its own
classification. Or at least more words.

What you describe is a combination of independence and
simplicity. It's partly about not being dependent on a communications
infrastructure other than your station, the
other station(s), and natural features like the ionosphere,
troposphere, etc. It's also partly about the relative simplicity
of an amateur station compared to the enormous but largely
unseen complexity of other modern communications
systems. Sure, I can call Australia on my cell phone - but
the cell phone is only one small part of the enormous and
complex infrastructure needed to make the call.

In amateur radio, the complex infrastructure is replaced by
a combination of luck (propagation) and operator skill.
This makes for unpredictable communications at times -
which is actually a big part of the attraction. When I call
CQ, or listen for another's CQ, I don't know who I'll run into,
whether I'll contact them or not, etc.

IMHO, one of the things many people miss in modern life is
a certain feeling of actually doing something start-to-finish. In most
jobs nowadays, people are part of a team, or a process, contributing
their specialized part to the result. This
is how our complex technological society is able to function
so efficiently.

The downside is that very few people today can point to
something in their work and say "I did that, start to finish,
all by myself". In fact, many things that people used to do
for themselves like car repair/maintenance and fixing things
are either too complex for the DIY person, or are not

meant to be fixed economically.

Amateur radio (and many other DIY activities) offer a way for people to actually do something start-to-finish, all by themselves. That's a key point is 'selling' amateur radio.

It's also a big reason behind homebrewing - the homebrewer knows every part of the radio, how it works, and how to fix it. That it may not be state-of-the-art or have all the features of a manufactured item is besides the point. That's something that simply cannot be bought.

In this case, however, you have a very finite resource (the
electromagnetic spectrum) and a multitude of users with varying needs
for it's use. In most cases, mixed-mode operqations don't work...Or
at the very least don't work well.

The proposed bandwidth subdivisions will be a disaster if they
ever come to fruition.

Because amateur radio is supposed to be self regulating.

Perhaps my impression is wrong, in which case I hope that someone will
correct me, but don't most countries treat the regulation of amateur
radio more like "here are your allocations"?

I would like to think that there are enough gentlemen in ham radio that
gentlemen's agreements and voluntary bandplans would be sufficient.
Based on what I hear on the air, that's a rather silly hope.
Nonetheless, it reflects badly on our hobby that an agency needs to
stand by with a big stick to make us do what we should be able to do on
our own.

Thank you, Steve. Your point is very real, and the historic 'solution' has been for the government (FCC) to impose regulatory handcuffs on the market-based arbitration of that tension. This has the practical effect of total regulatory favor of the legacy use over the exploration of new ideas.

New ideas not only have to overcome regulatory hindrance to feasibility trial (STA's, etc.) but once on the air must fit into a regulatory mishmash of allocation buckets already dominated by old legacy uses. This is the ultimate irony in the only radio service chartered to "advance the state of the radio art".

>multiple antennas.

The majority of automatic antenna tuners now made have some
form of frequency sensing to set their internal setting
memories. The majority of types will handle 100 W PEP RF
which fits the average manufactured transceiver of today.
Depending on the type/model, they can cover just the HF
spectrum or the HF plus 6m.

The single most important technical factor (after power
handling and frequency range) is the RANGE of impedance
magnitude that can be matched. That will vary depending on
type/model but a typical magnitude range is 6 to 1200 Ohms.
That is roughly the ability to handle SWR maximums of 8:1
to ~20:1. Baluns can be used to extend either end of the
range as needed. Most autotuners will indicate something if
they can't get a match so that lets you know.

Note I said Magnitude of the impedance to be matched. That
includes both the resistive part and the reactive part of
the impedance to be matched. The reactive part can be
capacitive or inductive but the autotuner will set itself
to match either...then it will set itself to match the
resistive part as close as the designers chose to 50 Ohms.

The end result is an autotuner that can handle the very low
impedances of mobile whip antennas to certain conditions of
frequency with long-wire antennas where the impedance
magnitude can be very high. As far as matching range goes,

the "robustness" is very good on all models within their
RF power range specifications. No sweat. :-)

I have an FT-897D as my primary shack rig, as well as an FT-857D (mobile)
and an FT-857 (secondary shack rig). I don't have any experience with the
KW 480SAT at all. I *do* like the FT-897D quite a lot: it has a decent
receiver with quite good noise reduction through DSP, as well as DSP-based
bandpass filters. I'd buy another in a heartbeat. The FT-857 and FT-857D
are the same radio (modulo 60- meter phone, TCXO, and possibly DSP) as the
FT-897 and FT-897D. All of them use the same programming software, have the
same set of CAT commands, return the same data, and can be run remotely
using the same programs. This has made life very much easier for me.

I don't like having to dive into a menu for some settings that I would
like to have on the front panel, but there's damn little real-estate
on the 897's front panel, and about half that on the 857, so I live
with it and enjoy the wonderful things the radio does. It does a great
many things very well stock from the factory; add some filters for CW
and SSB, and it's even better.

I think it's good until July first, 2007. Good luck -- and may you be
so well prepared that you need no luck at all.

I would suggest just going to www.ncvec.org and downloading
your choice of the current Extra exam and/or the one that
will go into effect in July of this year. You can then look them
over and see what you need to study more. The changes
might be slight such as the regulations (affected by the
restructuring of 2000?) but the VEC might have changed a
few "distractor" questions...:-)

Be aware that the Extra written element has about sixteen
times as many quesions as the minimum ten required by
the FCC. That is, to me, highly commendable of the NCVEC.
It is now more difficult to "memorize" everything on a test.

>bandwidth issues would be less of a problem too.

I disagree with both of you...:-) For one thing, 300 WPM
equivalent data rate at 170 Hz "Spread" on HF does a
credible job of sending text in only a half-KHz of
bandwidth.

The presumption is that "data" somehow MUST have "perfect"
conditions to avoid errors is false. The BER or Bit Error
Rate rules the show and is a function of noise and
transmission rate (in units per second) and bandwidth.
Claude Shannon used the example of a teleprinter signal on
his seminal 1947 paper...which became boiled down to the
more familiarly-known "Shannon's Law." That was 60 years
ago and Claude wasn't considering OOK CW modes. :-)

"Data" can have a wide BER range depending on the design
of the data coding, all compared data systems having the
same data rate, signal-to-noise ratio, and channel
bandwidth. Forward Error Correction improves the BER
but isn't an absolute necessity.

An example is the ordinary modem we use on-line. If you
have a human handset as well as the modem line, try
picking up the handset and making random noise in it while
the modem is on-line. That's an extreme case, but
survivable without data disaster. You might be surprised
at how well it can survive without messing up the screen.

>> Let's face it, digital voice is the only way to go.

>as the received transmission must be received in toto - IOW if you don't
>catch the beginning, you don't catch anything.

I disagree with that and I have seen/heard many such systems
but - certainly - not all of them. The digitized bit stream
can be structured to enable a receiver to ID it and lock onto
it quickly. It there are lots of tones in the multiplexed
digital signal (such as with OFDM) that should be enough for
an ID and lock-in.

>The solution to that
>would be channelizing HF, or assigning specific frequencies to Digital
>voice. In addition, unless there have been some big advances recently,

The "big advances" have already come, like in the late 1980s.
I'm mentioning a hint to the U.S. military SINCGARS in its
digital mode (with or without frequency-hopping). DSSS
essentially. Such can be slowed down or scaled to reduce its
bandwidth without disabling intelligibility (no encryption
needed or allowed by amateur regulations).

>Digital voice does not have any particular bandwidth advantages.

Maybe not, but the decoded voice can be crystal clear all the
way to the threshold point (where it breaks up suddenly). It
sounds like an FM link with lots of amplitude variation, yet
there isn't any decoded speach amplitude variation.

A case in point is HDTV that we've had in this house for a
year. I've put an attenuator in the TV cable line and NOT
see a bit of difference in video nor hear any in the audio
until there is lots of attenuation reaching the threashold
of input.

>Give me a Digital voice mode that I can tune across the band and pick up
>a conversation at any point in the transmission, and a 1 KHz or less
>bandwidth signal, and then I'll be interested.

Those are already in the works.

>And of course, I'll need
>to see that some other folks are buying the digital radios too, so I'll
>have people to talk to.

Hmmm...what if they are thinking the same thing? :-)

Case in point: PSK31, Peter Martinez' clever brainchild was
spread all over Europe and tested by many on the Continent for
four years before it was first publicized in ARRL publications.
Not many in the USA were aware that PSK31 even existed, let

alone proven under "field conditions." Publicity caused its
spread over on this side of the pond.

>> PSK is too slow for
>> data transmission of LARGE and multi-megabyte amounts of data, end of
>> story.

Sorry, John, but you haven't justified any NEED for "large and
multi-megabyte amounts of data" in the amateur bands below
30 MHz. Please think harder on how much data throughput CAN
happen with existing data bandwidths and rates first. It is
quite large, although that is in subjective terms.

> As for PSK, you are correct that it is too slow for data transmission.
>But that little 31 baud signal was never intended for Data transmission.
>It was intended for correctable text at a rate that a reasonably
>proficient typist could tap away at the keyboard in real time.

Absolutely so and that was a design goal of G3PLX way back
in the begining.

>Also a
>mode that can be efficiently operated at QRP and lover levels. And for
>that, it is an excellent mode.

Not necessarily true. PSK31 is efficient in terms of bandwidth
reduction versus data rate, still well within Shannon's Law, but
it can be used at high RF powers just as easily as low RF powers.

It seems to me to be Conventional Wisdom (a new form of "CW")
that "high power" in USA amateur bands is associated only with
OOK CW or SSB. All other modes seem to be ignored in the
literature as a general rule. That's not a technical thing,
just a subjective thing of the high-power types' desires. I've
observed that most of them are ultra-conservative (as a general
rule) insofar as mode use is concerned.

Sometimes one has to look "outside the box" of Conventional
[amateur] Wisdom to see where contemporary limits are in the
practical, working sense.

I can't agree with the "general societal decline" opinion.
That's been a general remark all through seven decades
of my life by each successive generation...who have all
generally flourished despite all their dire predictions.

What has been happening, to amateur radio as well as
to "general society" is CHANGE. Changes upset our
cozy concepts, those of the liked and familiar, with
strange new things, unfamiliar and untried. Changes
WILL happen and succeeding generations will consider
them as "old hat" in their day yet to come. :-)

I have to agree with Hans Brakob's "here are your
bands, have a nice day" concept (borrowed from the
late Don Stoner?). In general, that is. Practically,
there must be a middle ground in regulations. I don't
think that governmental micromanagement of mode
allocations per band is the way to go...nor should
there be so many conditional regulations on top of
those when the rest of the radio world is exploring
new things and making them work.

The FCC presently yields a lot of options to amateurs
insofar as mode use goes. If certain "gentlemen" are

inclined to stick with their familiar options at the expense of other gentlemen, then the gentlemen ought to settle it themselves. All the FCC can do is enforce their long-standing "no interference with licensed users" dictum which I think is a good thing. There's no territorial imperative to be claimed in amateur radio spectrum allocations, nobody "owns" certain bandspaces nor frequencies.

As time goes on, there WILL be changes to amateur radio bandspace divisions. There WILL be the usual cry by the established "gentlemen" and the general harrangues of those "gentlemen" desiring change. Seeking a middle ground is necessary and the FCC may have to step in (again) and change the subdivisions. If it must, then the "gentlemen" on both sides have failed to agree and the pessimistic view will be realized.

I'm not optimistic that all are "gentlemen" and can settle things among themselves. I would hope they would but I've seen a lot of generations of humans do their thing on many varieties of activities.

In studying for my Extra, using the ARRL Extra Class License Manual (2001), I came across an interesting note...

"There is a general rule that you may not be paid to operate your Amateur Radio station. In most cases this also means that you cannot operate an Amateur Radio station during the time that you are being paid by your employer."

Does this mean that if I'm sitting at my desk at work, doing a job that doesn't have anything to do with radio, and during break time I pick up my HT and call someone on the local repeater, that I'm violating FCC rules?

That would be a bizarre interpretation, and not anything I've ever seen before in 42 years as a ham...

And I participate during lunch-hour in a weekly net of our
employer-sanctioned (and supported) emergency amateur
radio services organization. Virtually all of us are sallaried
(not hourly) employees, and technically "on the clock".

I always assumed it was a prohibition on using amateur radio
for transport of commercial traffic.

371. Call signs for foreign amateurs operating in US

Newsgroup: rec.radio.amateur.moderated

In the old days, a foreign amateur operating in the US, or a US amateur operating in a foreign country, would use his own call sign, a slant bar, and the prefix of the country or location in which he is operating, e.g. "G5ABC/W1".

Somewhere along the way that got changed so that the prefix is now inserted ahead of the call sign instead of after, e.g. "W1/G5ABC".

When did that rule change go into effect? It must have been sometime during the 1990's when I was inactive on ham radio ... one of the many rule changes that surprised me when I got back into it in 2001, such as the 5 WPM code requirement for Extras for whom it used to be 20 WPM...

I can't speak for anybody else, but here in Norway this is the
case. There are power limits, of course, and bandwidth limits - 6 kHz
on most of HF, wider for higher frequencies. The IARU bandplans are
respected, so although SSB is legal in below 14.1 MHz, you don't hear
any.

Our regulations are very short - less than 2 1/2 pages when printed
by Firefox. http://www.lovdata.no/ltavd1/lt2004/t2004-1-10-65.html, if
anybody is curious.

Don't look now, but it is zero WPM. For everyone. :-)

When I sat for my written test, I took the one for General
also. I hadn't studied for it at all, but it didn't cost anything
extra. I missed it by two points, else I would be a General
today. I guess I'll have to break down and study this time.

Mike, you've seen enough other licensed radio amateurs by now to understand that, technically, they are rather conservative in adopting "new" things. My own opinion is 'uber-conservative' but that is just personal. :-)

PUBLICITY on new things, new modes is the key to getting attention.

I'll recite that PSK31 was innovated in the UK and air-tested by many amateurs in Europe for years before it got its first write-up in QST for USA amateur radio consumption. Why? I don't know for sure but I will start shining some light on editors and frequent contributors to QST. I think that they were honestly unaware of it. It isn't like they are unaware of the RSGB periodicals.

Another case is Mike Gingell's polyphase audio network. Mike, now a resident and ham licensee in the USA, did his PhD dissertation on that network. It enabled four quadrature-phased audio outputs with excellent phasing accuracy using lower-tolerance parts. It was publicized in Pat Hawker's column in Radio Communication magazine in 1973, the experimenter trying it out was Peter Martinez, G3PLX, the guy who would come up with PSK31 later. European hams have been trying it out for SSB modulation and demodulation ever since; makes for a smaller SSB sub-assembly. It got some attention from 1974 onwards over here, but not a lot. It even got lots of attention in the IEEE Communications magazine for frequency-multiplexed telephony but that was displaced by up and coming digital time-multiplexing right afterwards. Long-distance wired telephony was the first user of SSB, BTW. :-)

Conservative USA amateurs tend to stay with what they know and learned when young...except for the few who actually work with higher-tech modes for a living...and some of those tend to "relax" with tried-and-true modes off-work. That re-enforces the conservative approach to "state of the Art" advancement.

Part of that conservatism may be the "made only in America" thinking. Look at D-Star that's been getting publicity by

the Big3 amateur radio makers of Japan. D-Star has been
around for three years, innovated by the JARL. It seems to be
very good in providing flexibility to connect with the Internet
through VHF-UHF repeaters. [I got a demo of it just recently]
No, it's not a "practical" thing on "the bands" (what so many
amateurs call the HF bands) but it seems to work just dandy
on handling both voice and data together on VHF-UHF.

> The
> difference between say Spread spectrum and say PSK31 is that PSK
> apparently serves some purpose for a growing number of Hams, and SS
> doesn't.

Ummm...PSK31 was originally designed for HF ham bands and was
deliberately narrow-band. Spread-Spectrum modes are for wider
bandwidths available only on UHF and up in frequency. DSSS is
already a proven winner in multiple-user WLANs in other radio
services (no discernable interference or catastrophic BERs) but
is good only for LOS radio paths. As a result, it will see
application only in more densely populated urban areas in the
USA. Conservative radio amateurs here stay on HF and all its
narrowband limitations.

Now, it MIGHT be that FHSS could be adapted to HF, even if only
to 10m with that band's 1.7 MHz total bandwidth. That is uncertain
since it absolutely requires a higher-accuracy timebase than is
found in most upscale HF+ transceivers. [think timing update
and correction via GPS] It will NOT be "tunable" like the older
analog modes, at least that I can envision. Neither will it cause
much interference to those legacy-mode users already there.
However, it does have a potential of getting more users in the
same bandwidth for higher throughput than is possible with analog
modes.

Many, many things are possible, even the digital voice and music
on HF now being used for BC purposes. But, that's a niche thing
and only proves the mode is practical and viable. On the other
hand, there's some "comfort" in staying "establishment," of not
having to spend time finding out how those new-fangled things
work; i.e., survivalist conservatism. :-)

If you are doing this "on your own time" (which includes break time)
and does not have anything to do with the business of the employer or
the job that you are hired for or work that you are assigned to do,
then there's no violation involved. This is no different from reading
a book or balancing your checkbook on break time.

Of course if your employer objects, you may find yourself with lots of
time to work ham radio!!

That change went into effect with the Commission's Order FCC 98-204
released October 1, 1988 in WT Docket 98-20, setting up the ULS and
authorized CEPT and CITEL foreign licensed amateurs to operate in the
US without formal US reciprocal licensing.

There will always be a need because no matter how strong the
infrastructure is, situations will arise that exceed that capability.
Design of public safety communication systems is the specialty of my
engineering firm and I'm all too painfully aware of the real-world
limitations

Example: One of our med center nets is an inter-hospital net that
carries traffic on bed availability, staff availability, and medical
supply status and need to and from the Metro Regional Hospital
dispatch, the "czar" of inter-hospital operation, which directs
ambulances and supply resources to the available facilities. It is
currently staffed by personnel located in another neighboring med
center. The VHF simplex and repeater ham portion (ham stations
located in the Emergency Departments of all the local hospitals) backs
up a system which is a user group on the City of Portland's 800 MHz
trunked system. When things get tight, the trunked system will be
overloaded with police and fire operations, assuming that the system
survives at all. That's where the hams come in.

Interesting example because in some aspects the US is more liberal
than a lot of other countries with regard to the amateur service.

The only modulation scheme that I had any contact with the "delaying
factor" was spread spectrum. The powers-that-were were very reluctant
to permit this in the amateur service because of the history of spread
spectrum - as you well know it was developed for the military to
frustrate transmitter location and interception of traffic, two "gotta
haves" in FCC amateur radio enforcement (whether they are used or not
is a different story). When the equipment to do so was finally
acquired and put into service, the mode was released for general use.
That's real life in the trenches....

Are you certain of the date..? I certainly had to apply for reciprocal
"Alien Permits" the first 2 times I operated in the US, in 1993 & 1995.
>From 2000 on I never had to apply for one, but I'm sure I still put the
local prefix after my own call rather than before.

>the exploration of new ideas.

A (sad) example of the interaction of the Amateur Radio Service with the :"marketplace" can be shown in the loss of the 220-222 MHz band. The FCC's expectation was that it was going to be dedicated to a small number of wide-area commercial networks using Amplitude Compandered Side Band (ACSB), a system developed by "basement" tinkerers for commercial use using amateur frequencies because they couldn't get a license for commercial development (*)

It never happened. ACSB never worked, and the commercial equipment manufacturers never produced any sizeable amount of equipment for that band.

Did we get the frequencies back? In your dreams.

(*) I won't get into the personalities involved in the ACSB fiasco or of the slicing of the 220 MHz band - it's Sunday and I can't get enough blood pressure medicine if I do.... Suffice it to say that despite urban legend, UPS was not a real player in that mess.

What about ARRL employees who are paid for amateur related work?

Case in point - An ARRL tech is being paid to test, in the ARRL Lab, a new 2 meter radio for publication in the magazine companies August issue. He's being paid to write the article and operate the radio, right?

Of course, how does a magazine company with paid subscribers get a ham license in the first place (W1AW)??

417 ft from the business end of WWKB's 50KW blowtorch in Hamburg, NY, the former WKBW, a neighborhood popped up probably many years ago. Those houses closest to the last tower in the chain, using the inverse square law and the FCC database 4.2V/M at 1KM on two of the lobes, I figure there's over 200 VOLTS/meter in their living rooms on Robin Lane.

I wonder how they get the flourescent lights in the kitchens to go out? Can anyone have a stereo with external speaker wires feeding 200V/M back into the feedback lines of the transistor amps without making it go nuts like my neighbor's did from the Drake L4B?...(c;

That was thrown out by the Supreme Court of the United States in the
landmark case _Shelley v Kraemer_ that everyone studies in
Constitutional Law classes. The SCOTUS declared that a state court
enforcing that restriction made it a state action and such
discrimination was against Federal law, making that contract term
unenforceable.

We tried using that same approach to have PRB-1 apply via the
back-door in _Hotz v Rich_. a mid-1990s CC&R case in California, but
the California Court of Appeal shot us down, claiming that problems
with amateur radio antennas did not reach the same level of public
policy that racial discrimination did.

Thanks, Phil!

I've always seen it written as "Codes", but after a bit of thought, "Conditions" makes a lot more sense. Codes are not usually attached to a specific property; conditions are.

It should be noted that lack of CC&Rs still does not mean that a ham can simply put up whatever antenna(s) s/he likes without any concern about building codes, permits, etc.

This may seem self-evident, but I have seen too many hams try to do just that, or say that nobody can tell them what they can and cannot build on their own property. In most places, that's simply not the case at all.

Some of it is just economic. I'll be damned if I'm going to buy an
$800 ICOM D-Star VHF/UHF digital radio that operationally doesn't give
me any more than my existing VHF and UHF ICOM "rice boxes".

Especially since I just invested $2K in an Elecraft K2/100 HF rig with
all the bells and whistles.

Hospital workers and emergency service personnel are all being "paid" to
operate ham radio after they get their licenses, as are NOAA Weather Bureau
bureaucrats at WX4CHS, at the Charleston Weather Bureau Office.

None that I know of have been busted.

How do you know that s/he is not operating into a dummy load? <g>

The answer is in the content of the communication. If the content is
on the business of the employer, it is improper. If it's just general
hamming, especially if it's under the W1AW "umbrella" then it's not
improper.

It's no different from me borrowing a specific piece of equipment to
evaluate and then writing a magazine article on it for which I am
being paid
>

The ARRL is a membership organization. The licensee of W1AW is the
ARRL Headquarters Operators Club, a bona fide amateur radio club. They
do not operate the station to further the publishing arm of the ARRL.

I have a 7000 and love it to death. I have a couple of 706's, they are nice, but the 7000 is a step up. The 700 does have an awful lot of stuff on the menus, but they have moved most of the things you want to get to out onto the panel. There is a button every place there could possibly be a button!

Personally, I happen to like Icom's ergonomics better than Yaesu. Not as good in that department as Elecraft, but generally well thought out. (I'm kind of a CW guy so maybe Elecraft is a little more CW focused).

The DSP on the 7000 is a giant step up from the 706 (can't speak for the Yaesu). Not only does it do filtering and adjustable edges, but there are a pair of notches that actually work. The DSP noise reduction and ANF seem to work a little better than the 706.

Kinda cool that you can get a waterfall display on the front panel, but unless you are a RTTY guy, probably not all that useful... but cool. Bandscope is OK, better than the 706, but could be better. SWR graph is a wonderful thing.

Although it kinda sorta looks like a 706, and there is some commonality with the menu of the 706, it definitely ain't a 706. Way better in a ton of ways.

Infrastructure by it's very nature becomes more fragile the more
there is of it. disasters by their nature tend to occur when multiple
problems happen. Seems like a "duh" statement, but we see it all the
time. We going to put satellites up to do emergency Operations? Right
away I see some issues. Those birds aren't cheap, so we'll probably put a
lot of stuff on them. We'll probably have a lot if interacency
"patching" available, trunking of course. It will probably be an awesome
piece of technology. Maybe it will work. Fortunately no satellite has
ever failed.... ;^)

Your points are well taken Hans, butI see that as a need to have
regulatory responsiveness, not lack of regulations.

As I listen on 75/80 meters this evening, I consider the impact of
no suggested operating frequencies. At this low point in the sunspot
cycle, 75/80 becomes like a drying pond. There are a lot of people
operating there. There is plenty of griping about people operating too
close by in frequency too. Let's get rid of all the agreements? That will
be a great thing for the SSB OPs, especially running power. Move on down
the band a bit, and all is well. All isn't so well for low power ops such
as my favorite PSK31. We have enough trouble when W1AW opens up on 3580
with their CW bulletins. Much more the fun when High power ops can wipe
out our entire group. (actually 100 watts will do that) I suppose that
one could argue that majority rules - although 1 healthy SSB signal can
wipe out 20 psk31 signals. We could presumably up our power - although
every 100 watt PSK31 signal I've seen looks pretty awful, and pretty much
forces everyone else to crank up their power. That's just one example.
But it sounds to me like complete abandonment of the gentlemen's rules is
a great way to chase some people away and discourage some of the
experimentalism you would like to encourage.

It gets confusing even for those of us who need to stay on top of it. The
Extra pool was originally slated to expire in 2006 but it was extended two

years as the VECs decided that the Tech needed reworked in 2006. Then they proceeded to the General for 2007. This pushed the Extra out to 2008.

Mike, PART of the "infrastructure" includes radio amateurs.

Back after the 17 Jan 94 Northridge earthquake here, the
existing infrastructure was behaving just fine and FEMA
brought in a bunch more communications equipment, some
of it used to show continuous video of family/friend messages.
For all of FEMA's highlighted "faults," they were equipped to
handle comms as needed. By now the Los Angeles
Communications Auxiliary (run more or less by the LAFD)
is equipped and able to roll with comm-center bus/RV
modifications. I took my exam at one such Aux station
now still called "Old Fire House 77" despite it being
re-assigned from fire fighting to communications. Some
members of that Aux group are also licensed radio
amateurs and can operate from fixed as well as mobile
station locations.

Things really aren't so scarce/rare insofar as comms
are concerned in this big city complex of 8 million plus.
It may be that much smaller areas have scarce
facilities but that is up to those locations. I'm proud
that this area I live in has beefed up its communications
in the 13 years since the Northridge quake hit. What it
has done can be a model of integration for other areas.

Just a view a bit different than most others in here.

I suppose that what I'm about to say will raise some eyebrows, too.

It strikes me that the contribution of ham radio operators in a disaster is changing. Not so many years ago, it wasn't unusual for all communications to be rendered inoperable when a disaster hit, and ham radio was the only link with the outside world. We're proud of our "When everything else fails, ham radio still works" abilities.

Then there are the organizations that are spending lots of money to prepare mobile and semi-fixed facilities. Government agencies and NGOs have equipped various types of vehicles to roll into a disaster and provide communications using satellite and radio. They've installed or staged equipment in strategic locations. Much of this work has been done based on lessons learned during the Katrina operation.

The one thing that is always needed during a disaster is manpower. You can stage a satellite dish, but you need someone who is trained to deploy it after the hurricane passes through. You can equip a truck with all the communications equipment needed to hook up an EOC with the outside world, but who drives the truck into the area and sets up the equipment there?

The amateur radio community is the ideal place to recruit this kind of expertise. An alternative to doing things in the traditional way -- using your own equipment and communicating between hams using ham frequencies -- is to affiliate with an organization that is going to need manpower when a disaster hits. It's a different way of accomplishing the same goal. As the requirements for communication become more stringent due to pressure to prevent fraud and maintain privacy, I think that this aspect will become more and more important.

I present this as food for thought and an alternative, not as any criticism of current operations.

A way this works with WinLink (and what we are implementing in MA) is that
you put full-up WinLink stations, with both HF and VHF capability, in a few
hardened (state-owned) EOCs. Local EOCs and shelters use AirMail (the
WinLink client) with VHF TNCs to communicate with the state EOCs, with
forwarding over the Internet if it's still up, or HF otherwise. A VHF-only
WinLink client station can be quickly set up in a temporary EOC or shelter,
and can even be used mobile.

It's an idea, but there are pitfalls here. Having a developer wave or change the CC&R's is an option, but only if he actually can. Assuming that the developer actually owns the land (all of it) and can make changes to the restrictions for you, how many will? Remember there are only about 600K of us nation wide, not a large percentage of the market there. I'll bet that even if we all did this, any single developer would only see this once in a blue moon and making changes in the boiler plate CC&R's would not be done.

I'd also be afraid that the developer would try to give you a "waver letter" saying that the specific restriction in question didn't apply to you, but that's about as useful as the paper it's printed on once the development passes from developer control to HOA control. They wouldn't be bound by this "agreement" unless it's legally recorded on your title (and very likely on everybody else's titles as well.)

About the only real option here (Apart from joining the HOA Board and bribing the rest of the voting members to get a temporary exception just for me) is to save up my pennies and move to the sticks once I retire in 20+ years. In the mean time I'm stuck with what I can hide in the attic of my single story home which is full of HVAC equipment, electrical, alarm, and phone wiring and Christmas decorations.

But you may have the option to choose a house without them. I don't feel that I do at this point. It's not within my means within reasonable commute from where I work.

I guess this doesn't have too much traction with the ham radio folks doe to the demographics involved. The Average ham is older than I am, with more options both financially and geographically than I have. They are more likely to be established in situations where they are not effected by deed restrictions, or have better options than I do.

That doesn't mean that this issue is not important. I believe that it is very important to the future of the amateur radio service, right up there with defending the spectrum we have if not directly related to this issue.

|It strikes me that the contribution of ham radio operators in a disaster
|is changing.

There are localized emergencies.
There are regional and national disasters.

Two different animals that require different levels of response.

I don't see the need for extra radio channels going away anytime soon.

Those fancy DHS grant mobile communications centers on wheels are neat.
Typically they bring together fire, EMS, police comms at a single site
with an interoperatability black box to tie it all together.....

When the action is nowhere near a working Nextel tower or public
service repeater site and the satellite links are maxxed out and the
local telco can not climb a pole to jack them into the Internet or POTS
Amateur Radio technology will see action.

The biggest problems with the roving radio comm centers is desense.
With all the antennas ganged up on the roof of such a small area they
take each others radios out every time the other one transmits.

The key part of that is in the question.

It asks about accepting "compensation for serving as the control
operator of an amateur station"

In other words, acting as the control operator has to be
part of the job itself, not an incidental activity.

If a ham gets a paid lunch or break period and operates
an amateur station during that time, s/he isn't being paid to
do so. It's not part of the job.

Being paid *while* operating is not the same as
being paid *for* operating.

Still worth trying. If a developer starts losing sales because
of CC&Rs, they may be more flexible.

I don't know what the RE market is like in your area, but
here in EPA it is not as much a seller's market as it was
a few years ago. Sellers are making deals today that
they'd never have made in 2000.

That's why you need a competent real estate attorney, to
see that the restrictions are completely removed from the
deed in accordance with all applicable laws.

Some things are *not* DIY.

I disagree! I think it's at least worth looking.

IMHO, one of the biggest problems with buying real estate
is that it's not something most people do often, nor when
they choose to do it. The trick to getting the best RE deals
is to simply watch the market in your target area, and be
ready to jump when the right house shows up.

But if you accept defeat before even trying.....

My SDR-IQ spectrum-analyzer/HF receiver just arrived. I got it all hooked up and am *AMAZED*.

This is about as much fun as I've had with my clothes on in years, folks. It's not my beloved Collins R-390. It's not glowbuggy at all. It is a little card, 3.75" square, with three LEDs and three jacks, with some software to let me control it and present a display: waterfall, spectrum amplitude, I&Q, and some others that at present are not useful. Display widths go do _way_ down, and as wide as 190 KHz, though 150 KHz is a little easier on the computer.

I hooked it up to my Gap Titan DX vertical, and have been watching the signals flow by. I click on one and I hear it; click on AM, FM, WFM, USB, LSB, ISB, CW, or CWr to select an appropriate demodulator; Click again to set up the digital filter for that mode. The software drives my sound card's line input, so I can use MixW with it if I want. It's just plain neat.

Anyone else out there got an SQR-IQ? SDR-14? An SDR-1000 from Flex Radio? Care to share?

I'm impressed. Especially when I think about how I would react if someone asked for US regs in Norwegian. Of course, I could probably take the FCC prose and ask Google to translate it; it would be just as opaque in the machine-translated version as it is in English/legalese. <grin>

I have to disagree somewhat. Having gone through an exercise
in determining "closeness" of same-band aircraft radios on the
same aircraft (civil aviation band at 118-137 MHz) running 10 to
20 W max AM, only five wavelengths separation was fine.
That was back at a time (early 1970s) when high-third-order
IM specs hardly existed.

In a relatively local area, most such emergency comms will
be, generally LOS, and not "working DX." There's no point
in everyone running transmitters full-out in power for relatively
short distances. Yes, I'm familiar with Oregon topography
but NVIS techniques can also get out of the trees and the
deep low spots. If there's a Power Output control on the
rigs in use, it ought to be used to drop the RF output and
minimize desensing of nearby radios.

I'm just tossing in some things to consider in real-world
conditions. It isn't anything against what anyone is doing.

Not if the comm center is properly designed. The techniques for
siting multiple transmitters/receivers in confined areas and
minimizing mutual interference are pretty well established.

Being a Taxi driver and being dispatched by amateur radio = No - No!
Being a Taxi driver and visiting with friends on the local 2-meter while
waiting for a fare: No Problem.

Being an engineer for BNSF and talking to the conductor about the condition
of the train with 2-meter ham radio's = NO-NO!

Being a engineer/conductor and talking to the automobile driving down the
highway about the train on 2 meter simplex: No problem.

Space Shuttle (ISS) astronauts use Sarex to talk to school children all the
time, no problem, but if NASA used the amateur radio equipment to control
the flight then there would be a problem.

If you use the ham equipment IN/FOR your job is the problem.
If you use the ham equipment while at your job is only a problem if it
interfeers with your job performance.

Simple logic rules.

Well, that's what I've kept seeing/hearing for over half a
century as an adult. I have yet to witness it first-hand.
That comes from growing up in northern Illinois which had
(sometimes) rather hard winters, although not to the extent
of NW New York state conditions. I've been through several
earthquakes in the Greater Los Angeles area plus at the
edges of a typhoon elsewhere...plus a couple of river over-
flows also elsewhere. I'll discount the typhoons since those
were in northern Asia and I was in the Army at the time.
Being aware and informed through all of those events, I
just haven't seen/witnessed any case where "when all else
fails, ham radio will come through" equivalent.

I've never been IN a hurricane nor IN a tornado location nor
a tsunami nor in the middle of a massive firestorm. However,
I've seen videos (amateur photographer videos) of such events
on TV news...including the very newsworthy Katrina disaster.
Seeing such things on TV is very definitely NOT being "in"
one or suddenly becoming an "expert" on surviving one. My
last event (of being, most definitely) IN one was 13 years
ago and that was quite enough, sufficiently anxiety-prone
feelings despite having gone through several earthquakes
of lesser shaking before, both here and in Japan.

Has amateur radio actually helped handle problems caused
by a disaster DURING an event or have they been relegated
to emotional-support health-welfare messaging AFTER it?
Those are two different conditions. Communications DURING
an event have direct bearing on life-death situations while
communications afterwards concern survivors, the living.

I think it is important to differentiate between the two and
ALSO consider what actually exists in the entire
communications infrastructure that can and does survive.
Example of observable condition of flooding prior to the
Katrina disaster: TV news of a journalist being relayed live
via satellite from the Dakotas...with a clear background
image of a National Guard comms humvee with its whip
antennas tied down for nevis operation. First, the TV
person was getting through (with wide bandwidth) and
obviously in portable operation. Secondly, the NG units
use the same military radio equipment the regular military
does and are far more capable of greater environmental
extremes than nearly all amateur radio gear. On the
newsgroups and various ham websites, everyone seemed
to be giving high-fives to all hams for their marvelous
communications accomplishments...without themselves
being there. :-(

My question has always been, who is kidding who on all
this "emergency work?" It's a serious question which
always seem to raise the emotional hackles of some.
Did everyone get INTO amateur radio JUST to do all
that emergency work? I really don't think so for the vast
majority of radio amateurs. I got into it quite late in life
for one reason and one reason only: To have fun with it,
to enjoy it, to experiment (on a minor scale)...after
spending a half century of adult work experience IN
radio-electronics and enjoying all that work. I might even
try PSK31 out of curiosity; I respect the work of G3PLX,
Peter Martinez, and think it is an elegant solution to
casual communications in a very bandwidth-restricted
spectrum space.

> The one thing that is always needed during a disaster is manpower. You
> can stage a satellite dish, but you need someone who is trained to
> deploy it after the hurricane passes through. You can equip a truck

> equipment there?

Around here the (unpaid) volunteers of the Los Angeles
Auxiliary Communications Service do. They volunteer
to do what is needed. If that work is the "grunt" variety,
then they do "grunt" work. That's just how it is in real
emergencies.

> The amateur radio community is the ideal place to recruit this kind of
> expertise. An alternative to doing things in the traditional way --
> using your own equipment and communicating between hams using ham
> frequencies -- is to affiliate with an organization that is going to
> need manpower when a disaster hits. It's a different way of
> accomplishing the same goal. As the requirements for communication
> become more stringent due to pressure to prevent fraud and maintain
> privacy, I think that this aspect will become more and more important.

Well, I've served four separate terms of Jury Duty in my
county and served on five different juries. I don't plan on
becoming an attorney nor being involved in law...nor have
I planned to do so. Yet the jury panelists must exist IN
a very real courtroom environment and focus their
attention ON the law and case at hand. Good citizenship
should, I think, involve responsibility to the community.

I don't plan on becoming any sort of "emergency worker"
in communications yet, if a really big one occurs, I feel
that any kind of civic aid should be given, whatever kind.

> I present this as food for thought and an alternative, not as any
> criticism of current operations.

Understood. :-) Please color me skeptical on lots of
the emotional issues that have arisen in amateur radio
over time. I feel we should look at ALL sides of possibilities
and not get involved in the "cheering section" for "our team."

Excuse me while I continue to go through the manual for
this IC-746Pro that arrived safely yesterday. :-)

An interesting topic, but IMHO there are two distinct things here:

[1] being paid *to* operate and
[2] being paid *while* operating.

[1] is obviously a no-no but I see no problem with [2] - it is no different from what I can see to doing anything else personal while at work, i.e. reading a newspaper while having a cup of coffee in a spare few minutes or chatting to a colleague.

Unfortunately, my office itself is very well shielded from any local repeaters, but if I'm out and about around the site I'll often carry a handheld around with me.

If that is a real worry, each local amateur radio group can check it out for themselves...base-mobile-handheld, any combination they can operate on/in. There is really a great freedom in amateur radio to convene such a group for a real test at equipment distances on same or different bands using different RF output powers. That will yield data that can be of good use later in real emergencies.

Right. I agree with that. And it's been my interpretation of the rules for 44 years.

But, now along comes the ARRL and, in their Extra Class License Manual, says "There is a general rule that you may not be paid to operate your Amateur Radio station. In most cases this also means that you cannot operate an Amateur Radio station during the time that you are being paid by your employer.".

Where do you suppose they came up with that goofball interpretation of the rule?

430. Tech Plus upgrading to?

Newsgroup: rec.radio.amateur.moderated
Date: 2007-03-21 08:15:22 UTC
From: Jim Langston <tazmaster@rocketmail.com>
Message-ID: <Vk4Mh.711$cy5.318@newsfe05.lga>
Source record: 5028

I'm a technitian plus and my license expires next January. I figure rather than just reupdating it, I would want to upgrade. I actually haven't used a ham radio for years. About 4 years ago I was trading cars and put my 2m into storage, which then we lost (long story) and haven't used a ham radio since.

Anyway, I understand that the different classes have changed (tech plus doesn't even really exist anymore, does it?). I used to be, if I remember corretly, novice, tech, tech plus, general, expert. Now I *think* it's technitian, general, expert. Am I correct? I already have my 5wpm morse code but don't have any of my paperwork anymore (including my license).

What will I need to provide to prove I have the 5wpm morse code? Will I need to get a new copy of my license? I had my address updated a few days ago and it should be updated by now, if so I'll request a duplicate of my license.

Any advice would be great.

And that's true. Except in certain specific cases, an
Amateur Radio operator cannot be paid to operate
an Amateur Radio station.

That's true as well - in *most* cases. Not *all* cases.

> Where do you suppose they came up with that goofball interpretation of the
> rule?

It's not a "goofball interpretation" at all. It's just common
sense. In *most* cases you cannot legally operate an
Amateur Radio station during the time that you are being paid by your
employer.

The exceptions are:

- Teachers and other educators that use Amateur Radio as
part of the curriculum (that's in the rules)
- Break times, layover/rest times and meal periods, when
the employee is being paid but is not expected to be working.
- Space Shuttle and other space operations (generally considered to be
a combination of the above two exceptions)
- In an emergency situation if all other means of
communication are not available. (This applies to just about
any radio available - but it better be a real emergency!)

Just common sense.

btw, someone gave some examples, such as the BNSF locomotive engineer and the taxi driver. It should be noted that while *FCC* Part 97 rules may permit the operations described, that does not make them 100% OK.

Many employers have rules prohibiting their employees' on-duty use of radios other than those provided by the employer. In some cases this includes personal cell phones. The idea is to eliminate distractions, and the possibility of interference between radio systems. Of course this does not apply in an emergency if the normal means of communication aren't available, and the employer's rules usually allow for that.

It doesn't do amateur radio any good if an employee comes under disciplinary action or is fired for operating an amateur radio station on the job. Particularly if that operation compromises safety or getting the job done.

> Any advice would be great.

The current license classes are Technician, General, and Extra. There is no code test for any class of license so you will not need to provided proof of passing it. You will need to have your current license or proof of license.

To upgrade, you will just have to pass the written exams: element 3 to go to General and then Element 4 to go to Extra. You will also need your license, photocopy of the license, picture ID, and the test session fee.

Check the frequency charts on ARRL. Your HF privileges have changed. You now have CW privileges in the General CW portions of 15m, 40m, and 80m. Note however, that the General CW portion on 80m has also changed.

This was explicitely addressed in the October Omnibus Report & Order:

52. Mr. DiGennaro also requests that we amend Section 97.113 our Rules,
which
prohibits "[c]ommunications for hire or for material compensation, direct or
indirect, paid or
promised," by amateur stations,227 to clarify that amateur licensees who, by
virtue of their
employment, are directly involved in facilitating relief and recovery in
times of disaster are not
prohibited from effecting emergency communications using amateur radio.228
We conclude that
the proposed rule change is not necessary, however, because Section 97.113
does not prohibit
amateur radio operators who are emergency personnel engaged in disaster
relief from using the
amateur service bands while in a paid duty status.229 These individuals are
not receiving
compensation for transmitting amateur service communications; rather, they
are receiving
compensation for services related to their disaster relief duties and in
their capacities as
emergency personnel.230

Ok...
I'm on a salary, I get paid for a week of work but I take a day off to go
fishin'... I talk on my 2mtr and by your interpertation, I'm illegal because
I'm using my 2mtr while I'm getting paid.

I think a little common sense goes a long ways here.

Now, the rule was meant that amateurs can not and will not use their radio
for conducting business. That's the illustration of the taxi driver or the

railroad engineer. They can't conduct actual business over amateur radio while at work or when off. They can, however, if within the rules and regulations of their particular company, talk to friends about non-business related chit-chat.

I have worked for an automotive dealer for >30 years. I catch myself giving automotive advise (service/parts type of advise) and wonder if I'm violating the business rule. I've had many private discussions with VE's and many others, and we figured out that as long as I don't ask them to come down and purchase a part/have the service done/ buy a car from me then I'm ok giving advise on how to fix the problem or what to look for or what to buy or how to do it, etc.

Now, while at work, and I see a storm comming, I'll make my report. If I'm takin' a break and go outside and talk to a friend on a machine for 5~10 minutes, I'm not breaking any FCC rules, nor am I breaking any company rules about radio communications.

Agreed, Jim. It's a disaster up here. Not only are new houses not
selling, but there are going to be a lot of new ones coming on the
market as the people who bought all the houses on the "voodoo mortgage
plans" lose their homes as the payments double or more than double.

My point is that I would wager a beverage of your choice that at this
time, if you approach a real estate agent or developer and let them know
that the antenna restriction is there, you are going to walk - the
restriction will go in a New York minute.

And how! When we bought our house, and at signing, our attorney found a lien on the place that wasn't found through the entire buying process. Apparently the previous owners knew about it too! We were saved an unholy mess after the sale. He did his job well and didn't just accept the papers he was given. We're a walking advertisement for the guy now.

One of the most fortunate bits of luck I had was that although I was about 5 years away from becoming a Ham when we bought it, the Neighborhood isn't antenna restricted, with the exception that if you put up a tower, it has to be far away enough from the neighbors that it won't fall on their house - seems reasonable to me! ;^) All I have to do is please the XYL, and I'm there.

> I disagree! I think it's at least worth looking.

People have pressed some unusual things into stealth antennas. My very first antenna was a wire just above the roof line. It was only visible if you knew exactly where to look. And it worked okay, nothing great, but I could get a signal out.

I suppose if a neighbor asked, you could tell them it was a roof moss control line... ;^)

There are a lot of flag poles that have funny little boxes at the bottom, and a wire that runs into the basement also...

Personal listening experience here.

There was a hurricane that went through South America a year or two back, on the way toward the US. I listened to an emergency net as a Ham was helping another who was on a small ship caught in the storm. I believe it was near Grenada. The ship was having engine problems, the skipper was inexperienced, and a ham with maritime experience was "procured" to talk the other guy through saving the boat and passengers.

Listening to the transmissions, I have no doubt that had the instructions and help been relayed, the skipper and his passengers might have become statistics.

> Those are two different conditions. Communications DURING
> an event have direct bearing on life-death situations while
> communications afterwards concern survivors, the living.

The emergency is not a finite point. People who are injured during an emergency can survive or expire during the aftermath. Who can say which particular communications are critical except in retrospect? Health and welfare comms are extremely important to those affected. It is important work, whether involved in dire emergency or the less pressing aftermath.

> My question has always been, who is kidding who on all
> this "emergency work?" It's a serious question which
> always seem to raise the emotional hackles of some.

There is a difference between Amateurs and those who are being paid for their work. The amateurs are not being paid. Glad handing has sometimes been called the wages of volunteerism. Perhaps a situation similar to Volunteer firefighters is at work? Some people have issues with them also. Yet they fill an important function.

I respectfully have to say that if a ham says something about Amateur radio contributions to emergency communications, there are some people who automatically dismiss their statements. Fortunately one does not have to engage in the activity as a ham. It is completely voluntary.

Jim,

If you passed the Technician test before March 21, 1987, you need only
provide proof to a VE team at an exam session, and you'll be given
element 3 credit, and thus will be entitled to a General upgrade without
testing.

If you passed the Technician test _after_ March 21, 1987, you'll need to
take the Element 3 written exam.

To get verification of your license status and exam date, write to the
FCC and ask for a "Status Verification": the procedure is attached below.

HTH.

Bill W1AC

- - -

Summary : Amateur Verification
Description : Amateur Verification
Solution Description : If you do not have a copy of your old amateur
license that shows when you were granted a certain operator class, you
can request a verification of your license status at that time by postal
mail, email, or fax.

Send a letter to:

FCC
Attn: Amateur Manager

1270 Fairfield Road
Gettysburg, PA 17325

You can also fax it to 717-338-2850 - put Attn: Amateur Manager on the cover sheet.

You can also submit this request at http://esupport.fcc.gov/index.htm

Information you need to include:
1)Call Sign you want researched
2)Licensee Name as it appeared on the license
3)Mailing Address as it appeared on the license
4)Current Mailing Address
5)DOB
6)Class of License (Novice, Tech, Tech Plus, General, Advanced, Extra)
7)Approximate date license was issued

You will be sent a letter verifying your license status, so please provide a current mailing address in your request. If you need an upgrade application submitted, you will need to contact a volunteer examiner. You will need to present a copy of your old license to show proof of passing the tests, or the amateur verification that you have received.

To locate an examiner in your area, visit
http://wireless.fcc.gov/services/amateur/licensing/vecs.html

Not being a mariner and one who avoids riding ON water, I can't
comment on the veracity of that. :-)

In a relatively recent event, a west coast sailor was attempting
to sail solo towards the southern tip of South America, became
damaged (de-masted?) and the Chilean Navy - Coast Guard came to
his rescue along with other private ships in the area. The news
of both search and rescue was carried on all the TV news and
amateur radio did relay that news albeit a bit late.

Was amateur radio communications "vital" in that case? Or wasn't
it of a secondary nature in the form of "health and welfare?"
I say the latter since the principal rescuer was the military
of the government of Chile with the cooperation of fishing
vessels in the area. Safety of Life at Sea has been a bond of
ALL mariners since well before radio was demonstrated as a
communications medium. This was a case of SOLAS in action.

>> Those are two different conditions. Communications DURING
>> an event have direct bearing on life-death situations while
>> communications afterwards concern survivors, the living.
>
> The emergency is not a finite point.

I have to disagree. Those directly involved in ANY emergency
would probably agree with me on that.

> People who are injured during an
>emergency can survive or expire during the aftermath. Who can say which
>particular communications are critical except in retrospect?

I would say the individuals directly involved can say that very definitely. Before this solo sailor's power ran out, he reported being de-masted and adrift and that his power was running low. To my mind that is about as direct a determination of an actual emergency as can be...albeit my not being a mariner.

An airliner captatin reported an emergency when an air carrier's nose wheel did not retract properly; the nose wheel assembly had become turned from its natural position. The FAA accepted that as an emergency, coordinated with Los Angeles airports for emergency help, having fire engines standing by along with rescue workers. TV news relayed it live for viewers. Spectacular safe landing even though the nose wheel assembly caught fire. I don't recall the number of passengers on board but at least a hundred lives were directly at risk...all survived.

> Health and
>welfare comms are extremely important to those affected. It is important
>work, whether involved in dire emergency or the less pressing aftermath.

Well, I was taking things in order of importance. When human life is at stake, I put the priority on direct emergency communications to save such life. Reporting on the results of aid/rescue afterwards after that would, in my mind, be deemed secondary. Yes, that secondary role is important for the emotional well-being of relatives and friends via "health and welfare" comms, but I still rank it secondary. Others may disagree.

>> My question has always been, who is kidding who on all
>> this "emergency work?" It's a serious question which
>> always seem to raise the emotional hackles of some.
>
> There is a difference between Amateurs and those who are being paid for
>their work. The amateurs are not being paid.

Yes, that is why the FCC titles Part 97 as "AMATEUR Radio Service." :-)

>Glad handing has sometimes been called the wages of volunteerism.

Good point! But, my mention was in regards to amateur radio as a hobby, an avocation, something to be done in one's free time. Is/was the amateur radio service organized as an "emergency communications" primary role? Or was it organized as an unpaid, personal, technological-oriented activity done by individuals? I say the latter.

Too often some individuals blend the two organization-origins with the "emergency" part rationalized as justifying the real activity. I would say that is wrong. As responsible citizens

we all should help in some part with our communities in some
way. Amateur radio is only one way to help and then primarily
for rather extreme situations.

> I respectfully have to say that if a ham says something about Amateur
>radio contributions to emergency communications, there are some people
>who automatically dismiss their statements.

Yes, there are. I've been called one of those! :-)

>Fortunately one does not
>have to engage in the activity as a ham. It is completely voluntary.

True. The state of California Auxiliary Communications Service
will accept anyone to help in emergency communications, licensed
or not, as long as they can demonstrate they know something about
communications. The California ACS considers ALL forms of
communications to be vital and ANY that survive extreme
emergencies would be used. Yes, having a license helps, whether
commercial or amateur (in my case both), but that license by
itself is not proof positive that an individual knows enough
about radio and less about wired communications.

Now, I've been accused of being geographically bigoted by
mentioning California and the Greater Los Angeles area as models
of emergency communications. For one thing, California is BIG
having over 10 percent of this nation's population, rivaling
the entire population of Canada. The state has weathered a
tsunami wiping out a small coastal city, many earthquakes, many
brush and timber firestorms, flooding, and damage from heavy
rainstorms. The L.A. emergency communications center was new
and operating for the 17 Jan 94 Northridge earthquake that
affected about 10 million people and killed 53 humans...it
worked through the efforts of organization, training, and
regular drilling of participants. The "infrastructure" didn't
fail and the cities making up this megalopolis survived.
There's quite enough history of successful operations through
very real emergencies available to anyone who bothers to look
and seriously consider adopting those plans and experiences for
their own communities. Examination of what has worked and what
hasn't can be considered as a form of volunteerism...

No, the "Break times....." comment applies to the day off situation. You are getting paid but you are not expected to be working. And you are not getting paid to specifically operate that radio.

We don't have that problem here. But the market isn't as
hot as it was a few years ago. That's true almost everywhere.

Unfortunate but true.

There was a time, not too long ago, when the lenders
and regulations were *very* cautious about people's
debt limits. Things were set up to prevent people from
getting in too deep a hole. But in recent years, the

opposite has become true.

> restriction will go in a New York minute.

I agree - *if* you are ready to buy, and *if* they can
get rid of the restrictions.

Side Note: The OTARD ruling is really just the tip of the iceberg
IMHO.

As energy prices rise, I think we will see more and more
alternative-energy installations. For example, a solar hot-water-
preheater could reduce the cost of domestic hot
water. If the price of photovoltaic cells comes down
enough, they could help reduce electricity cost. And of
course there's wind energy.

But such things are probably prohibited by many
CC&Rs, for a bunch of reasons. We may see the day
when such CC&Rs are being overturned because of the
cost of energy.

My RE attorney found all the deed restrictions on this house.
Most of my neighbors had no idea they even existed. None
of them are anti-antenna, and most (like setbacks and
impervious-surface rules) have been superseded
by local ordinances.

> • • • • One of the most fortunate bits of luck I had was that although I was

Depends on the size of the lot. On a lot that's , say, 100
feet wide, you can't put up a tower more than 50 feet high
and have its "fall circle" not go over the property line.

> All I have to do
> is please the XYL, and I'm there.

Yup.

> > Some things are *not* DIY.

Like The Law.

I am still surprised at how people who wouldn't dream of
working on their car, or their computer, etc., will think
they have the expertise to do real estate buying and selling
without a competent RE attorney looking things over.

What I meant was that even though KC4UAI thinks there
are no unrestricted houses that are in his area and
affordable, he should still keep looking.

There you go!

> There are a lot of flag poles that have funny little boxes at the
> bottom, and a wire that runs into the basement also...

In SNJ a few years back there was a case where a
military veteran had all of his children on active military
duty in the Middle East. They were in combat units, too.

He put up a standard flagpole on his front lawn, and would
fly the US flag every day. I saw pictures of the house - the

flagpole was very nicely done, and not out of scale.

The CC&Rs on the property did not allow flagpoles. The HOA fined the vet and took him to court when he would neither pay the fines nor take down the flagpole.

I don't know how the case turned out. But I remember it when people say that if someone signs away their rights, they should stick to the rules.

I have the MFJ-1786 Hi-Q Loop (30-10 m) vertically mounted on a 5' tv mast in the middle of my small walled-in yard. It's easily visible from the main street that enters this HOA controlled subdivision, and in the 9 years I've lived here, NO one has said a word about it. If anyone were to ask, I would tell them it's a yard sculpture. (I painted the black plastic a light green to go with nearby trees.) The antenna works amazingly well, by the way.

Yet is that actually the correct way to calculate it? That assumes that the tower will break at the base and fall over from the base. This is not the common failure mode (or so I've been told). From one of the experts who was speaking to a city council meeting around here, the towers either twist like a corkscrew or bend over somewhere between the middle and top. The "corkscrew" is supposedly the most common failure mode as that is the way the towers are designed to react if wind loads are exceeded. However in neither case is there a "fall circle".

Does anyone have information on this? Although the speaker was supposed to be an expert, I'd be interested in some independent information on this.

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate
articles, it was decided to create the group as a moderated newsgroup.
```

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rri/index.html

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.

The site from which we moderate this newsgroup, "Public Access Internet
and Unix, NYC" (Panix), is directly connected to the Internet, and
```

articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions
rec.radio.shortwave International broadcasting on the 'HF' bands

rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org>

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Other radio services have distinct markets with distinct needs that
they are chartered to serve.

Amateur Radio is unique in that it is chartered as a playground for
tinkerers and experimenters. It seems ironic to tightly regulate
modes/bandwidths/modulation schemes in an environment where
experimentation is officially encouraged.

I gave $375, plus $15 shipping, for mine. Don't know if there are any
more left from that production run; apparently I was lucky to get one
that someone else had ordered and then backed out on.

It is the *NEAT*est toy I've had in a lot of years. Very high *SHINY*
factor, very high geek_quotient. But at 600 MBytes (call it one CDRROM)
every 15 minutes, saving RF capture files is damned disk-intensive. It
can be network-intensive, too: I ran the legs off my home Gig-E net
moving the files to the fileserver, and running it remotely over the
network leans hard on the network, too.

I'm also looking hard at the Flex-Radio SDR-1000; it's in a price
range that fits inside next year's longevity payment.

Gotta find an antenna relay now, and make sure I can use the SDR-IQ to
receive without blowing its front end when I transmit.

True that the tower size ends up being a little restricted. In reality aren't many towers in my 'hood anyhow, because we are in the middle of a forest. Lots and lots of big trees to hang wires from tho'. ANd no restrictions on that.

After reading your post, I visited a few sites on the subject. With all the other stuff on them, the one thing I took away was one HOA president trying to justify the ban on flagpoles: We have 1400 houses in this subdivision. What would happen if all 1400 put up flagpoles and flew flags?"

I for one, would find it a thrilling site!

The structure hight as a radius is the "worst-case" limit of
damage. Insurance underwriters, country commissioners,
et.al. likely don't want to expose themselves to the liability
of setting a more risky limit. Our anecdotal history of typical
tower failures may not seem as compelling to people with
actuarial risk at stake.

452. Ladder line routing

The XYL has expressed her dismay at my ladder line coming down over the roof the way it does. I plan on rerouting it this spring.

I plan on routing the line along the roofline, then run it to and below the soffit. Then into the usual entrance.

What is a good holder for the ladder line - basic windowed plastic variety?

But my biggest concern is that metal soffit. I'll be running along about 20 feet of that, and I suspect that there will be some effect. What is a safe distance from the soffit?

> tinkerers and experimenters.

That's one of the reasons for amateur radio. But not the
only one! A lot of different activities have to share the bands.

But I like the playground analogy.

All the playgrounds I've seen are carefully designed to
support a variety of different activities. There are
designated areas for various sports, for example. And
there are rules to keep order, permitted and prohibited
activities, etc. Certain activities need special permission,
others are informal.

IOW, there's a structure to a playground. And the structure
is most important when the playground is small and the
number of people who want to use it is large.

There was a time when 99% of ham radio activity was
either CW/Morse Code or plain AM voice. Back then, a
simple structure was all that was needed.

Those days are long gone. We need a lot more structure
than before, IMHO.

> It seems ironic to tightly regulate

Amateurs are much less regulated in that regard than
any other radio service. IMHO

I used a standard screw-in TV-line standoff. In some places in the route, I just hung it with string.

> But my biggest concern is that metal soffit. I'll be running along about

I'd guess 4 - 5 inches should be fine. I ran both 300 and 450 ohm plastic "ladder" line at my old townhouse, and had no trouble using the above methods. I even ran the line through a frame/stucco/chickenwire house wall, via a 2" diameter PVC pipe, with good success.

Actually shouldn't there be some actuarial data on this? When it comes to damage, they'd be the most likely to have solid data. I noticed that no one addressing the council had bothered to get such data either way on this subject.

At this point, it's just idle curiosity as our ordinance got changed to 75 feet (up from 50) and there was no "fall circle" type of language included.

Mike,

If you're using ladder line on 160, 80, or 40, I recommend you just substitute coax. Assuming a reasonably cut antenna, the loses aren't high enough to hastle with the extra mounting stand-offs ladder-line requires.

Alternatively, you could drop the ladder-line directly from the antenna to a 4-to-1 or 6-to-1 balun, and use coax from there. I've seen both approaches used with good results.

YES problem. The FRA and most railroads' rule books prohibit train
operating crews from using any communication system not related to
train operation or safety (reporting incidents) while on duty.

Whether crewmenbers adhere to that or not is up to the individual, his
union representative, and the powers-that-be if caught.

There's nothing wrong with the English version! Any communications attorney can understand it with no problem. <big grin>.

When I was an advisor to the Israeli Ministry of Communications (40 years ago) one of my jobs was to rewrite and translate their amateur rules into English. No big deal - I'm technically fluent in both languages. Same for the Norwegian, or Swahili, or Urdu - get someone who is technically fluent in both languages and it's a snap.

That job was a lot of fun, however. I fixed some problems that they didn't even know they had (and got reciprocity and third-party traffic approved in the process)! <even bigger grin>

Must be boring to explore in such a playground with all that structure and rules. One of my favorite playgrounds is the Superstition Mountain Wilderness, a playground completely disorganized except for the boundary around it.

You can go hiking there or ride your horse, prospect for gold (the "Lost Dutchman Mine" hasn't been found yet), camp for a night or a week or a month. You can follow trails which have been blazed by many hikers or horsemen before you, or be an explorer and leave the established trails to the timid. The only rules here are don't burn the place down, and don't trash the place for others. Explore without rules and structure.

Kinda like I'd like to see the amateur bands, open for the explorers and visionaries (so long as they're polite to the other children).

BPL INTERFERENCE: THE LIGHTNING STRIKE OF PROOF

A lightning induced power failure in an
Australian community has provided graphic proof
that Broadband Over Powerline communications can
be the source of massive interference to High
Frequency communications. W-I-A newsman Justin
Giles-Clark, VK7TW, joins us from South Hobart with the details:

--

On the morning of 17 February 2007 a lightning
strike caused the loss of power in the Mt Nelson
area. With power and BPL systems non-
operational, background noise level measurements
where taken around the QTH of VK7HCK and VK7HK.

Measurements were taken on 20 meters using Owen
VK1OD's field strength measurement
software. Comparisons between the previous noise
floor measurements taken in January, March and
July 2006 and measurements taken with no power
and no BPL, show a noise floor that is between
10.9dB (12 times lower) and 12.6dB (18 times)
lower than the previous noise floor measurements
taken outside the BPL Trail area.

The most likely explanation for the lower
measured noise floor level is the lack of power

in the previously BPL enabled area. This
would mean that all mains power devices
including BPL equipment would have ceased to
operate and therefore ceased to emit any contributory radio frequency
noise.

--

The key conclusion from this report is that the
interference caused by B-P-L emission levels has
been grossly understated. The complete report is
available on the VK7 BPL Watch Page. At
www.vk1od.net/fsm/ and http://reast.asn.au/vk7bplwatch.php#NoiseFloor
(WIA)

THE BPL FIGHT: IEEE DEVELOPS WORLD WIDE BPL STANDARD

Back in the United States,
Broadband-Over-Powerline has received words of
guidance from the Institute of Electrical and
Electronics Engineers. Better known as the IEEE
the assembly of technologists has announced that
a working group has developed requirements for a
baseline B-P-L standard that will hopefully
mitigate some of the current problems it causes to radio communications.

In its statement on March 14th, the IEEE 1901
Working Group said it has developed more than 400
requirements for the B-P-L standard. It had also
issued a June 4th deadline in calling for
proposals for technical systems that meet these
conditions. This involves protocols that govern
how hardware for various applications can share
the medium without interfering.

Entitled "Standard for Broadband over Power Line
Networks: Medium Access Control and Physical
Layer Specifications," the document will
hopefully pave the way for sending high-speed
digital data over power lines between substations
and home and offices with minimal interference to
other spectrum users. It will also provide
guidelines for the transmission of digital voice,
data, and video over electrical lines within structures.

With its new standard now released, the IEEE
expressed optimism that a draft global standard
could be created in 2008. After that, companies
would have a master plan to guide them to
manufacture components and systems to develop the BPL industry.
See

http://standards.ieee.org/announcements/pr_1901_proposalcall.html
for more. (IEEE)

**
REGULATORY: HAM RADIO BAND PROPOSALS TO THE ITU

Three items extremely important to Amateur Radio
are contained in a draft text of the technical
report to the World Radiocommunications
Conference. This in a paper that has been in
preparation by the ITU-R study groups over the past 3 to 4 years.

The items of consequence to hams are the
proposing a world-wide secondary Low Frequency
allocation to the Amateur Service between 135.7
and 137.8 Kilohertz. Also a proposal for a
world-wide primary allocation to the Amateur
Service of the band between 7.2 and 7.3 MHz and a
world-wide secondary allocation between 5.26 and 5.420 MHz.

The 135.7 kHz allocation proposal is widely
accepted. Japan has suggested that the power
limit for that spectrum be left to each
administration to be determined. This position
was strongly opposed by the Arab countries.
During a recent meeting, some compromise was
reached with a small change to the text.

A review of the allocations between 4 and 10 MHz
was much more difficult. It turns out that there
are major disagreements between opposing
groups. This could lead to the proposed Amateur
Service expansion of the 40 meter band becoming a bargaining chip.

A lot of behind maneuvering by an International
Amateur Radio Union team resulted in the 40 meter
proposal remaining intact in the final
report. Even so, a lot of work lies ahead for
the IARU and individual societies world-wide. (Southgate, SARL)

NAMES IN THE NEWS: KB2GSD SAYS US NEEDS TO GET OUT OF IRAQ

Famed CBS newsman Walter Cronkite, KB2GSD, says
that it time for the United State to get out of
Iraq. Amateur Radio Newsline's Fred Vobbe, W8HDU, has the details:

--

Retired CBS news anchor Walter Cronkite, KB2GSD,
says that the war in Iraq was a mistake and that
we should have gotten out a long time ago.

The 90-year-old Cronkite was in San Jose, California on Friday, February 23rd addressing the city's Commonwealth Club. Later, in an interview with the local CBS affiliate, weighed in on the situation in Iraq saying the entire war there it's a disaster and the earlier we get out the better.

It was in 1968, when the then CBS Evening News anchorman did a tour of Vietnam, and came back highly critical of that war. His declaration that the Vietnam War was un-winnable led to such a shift in public opinion against the war that then President Lyndon Johnson was quoted as having said, "If I've lost Cronkite, I've lost America."

But that was then and this is 2007. And when asked if his strong words against the Iraq War would have the same impact as his words against the Vietnam War, KB2GSD responded -- quote: "I would like to think it would be helpful in getting us out of there. Anybody who can put another match to that fire, to get us out would be, I think, welcome"

--

What effect if any that KB2GSD's statement on the Iraq war might have on future U-S foreign policy, is unknown. The complete interview with Walter Cronkite is on-line at http://cbs5.com/local/local_story_054223026.html (RW, KPIX-CBS-5, other published reports)

RESCUE RADIO: POTENTIAL WEATHERSAT FAILURE COULD MEAN MORE WORK FOR HAMS

Ham radio SKYWARN and post-storm relief operations could become even more vital in the future. This if a key weather satellite that is already beyond its expected life span were to fail on-orbit.

Bill Proenza is the new Director of the National Hurricane Center in Miami. He is quoted in the Southern Mississippi Sun Herald as saying that certain hurricane forecasts could be up to 16 percent less accurate if the aging satellite ceases to operate before it can be replaced.

One of Proenza's immediate concerns is the so-called "QuikScat" weather satellite. This is a bird that permits forecasters to measure basics such as wind speed. Replacing it would take at least four years even if the estimated $400 million cost were available immediately.

"QuikScat" is currently in its seventh year of operation and was only expected to last five. Without the satellite providing key data, both two and three day forecasts of a storm's path would be affected. That would also mean longer stretches of coastline would have to be placed under warnings, and more people than necessary would have to evacuate. Both of these are areas where ham radio volunteers are considered vital based on their training and expertise. (Adapted from Mississippi Sun Herald)

ENFORCEMENT: NEW FCC AMATEUR RADIO ENFORCEMENT WEB PAGE

The FCC is now publishing its own list of regulatory offenders on a newly created web site for that purpose. As of March 14, most Amateur Radio enforcement matters began being made available on the FCC's "Amateur Radio Service Enforcement Actions" cyberspace page.

According to FCC enforcement specialist Riley Hollingsworth, the agency expects to update the page it every 7 to 10 days. It will be a cumulative listing. That presumably means what gets posted for the most part will remain posted permanently.

Also, not every bit of correspondence will be included at the site. Such items as letters requiring re-testing or those requesting an initial response to a complaint will not be included. The link is http://www.fcc.gov/eb/AmateurActions/Welcome.html) (FCC)

**

ENFORCEMENT: YET ANOTHER HEFTY ILLEGAL CB GEAR SALES FINE

The Federal Communications Commission has ordered Charles E. Vance III doing business as CB Candy Electronics to pay a $14,000 monetary forfeiture. This, for offering for sale

non-certified Citizens Band transceivers and
external RF power amplifiers at his place of
business in Ontario, California. Amateur Radio
Newsline's Bruce Tennant has more:

--

This is a story that will sound similar to one we
reported last week regarding the advertising and
sale of non FCC certified transmitters for 11
meters. This time around it is illegal C-B gear
on a website that is bringing a hefty monetary forfeiture.

The FCC says that Charles E. Vance III is being
fined for willful and repeated violation of
Section 302(b) of the Commissions Act and
Sections 2.803(a)(1) and 2.815(c) of the
Commission's Rules. This, based on several
pieces of non certificated radio transmitting
equipment listed for sale on his CB Candy Electronics website.

Thee FCC says that on June 28, 2005, an agent
from the Enforcement Bureau's Los Angeles Office
visited the CB Candy Electronics website. There
he downloaded a sales catalog that displayed and
offered for sale multiple makes and models of
non-certificated CB transceivers. The catalog
also included numerous makes and models of
external radio frequency power amplifiers. A
review of the Commission's records revealed that
these devices had not received an equipment authorization from the
Commission.

On June 28, 2005, the Los Angeles Office issued a
Citation to Vance for the alleged
violations. In a response dated July 21, 2005, a
lawyer for Vance disputed "all legal and factual
contentions set forth in the citation." Vance's
council stated that the transceivers listed in
the Citation were legal to sell.

The FCC says that the response did not address
the marketing of external power amplifiers at
all. Instead it stated the expectation that the
Citation would be withdrawn within 14 days. The
Los Angeles Office did not withdraw or otherwise
cancel the Citation within the period set forth by counsel for Vance.

Instead, on September 6, 2005, and again on
February 3, 2006, an agent from the Los Angeles
Office again visited the CB Candy Electronics
website. The agent downloaded the identical

catalog as found on the website on June 28, 2005. All of the non-certified CB transceivers and external RF power amplifiers were still being offered for sale.

On March 22, 2006, the Los Angeles Office issued a Notice of Apparent Liability in the amount of $14,000 to Vance. Vance's legal counsel filed a response on May 4, 2006, stating he was unable to obtain a copy of the catalog referenced in the N-A-L from Commission staff and argued that the refusal to provide him a copy of the catalog was a denial of due process.

But the FCC disagreed. In affirming the fine, the regulatory agency said that Sections 0.453 and 0.455 of the Rules detail the records that are routinely available for public inspection at the Commission. Unless a type of record is so listed, a request to inspect the record must be made pursuant to the Commission's Freedom of Information Act procedures. The FCC says that the type of investigatory records compiled for this enforcement action are not so listed. Therefore, Vance's counsel was required to file such a request to obtain them. But Vance's lawyer filed no such request and, consequently, failed to invoke the procedure mandated by the Commission to obtain such records. Therefore the FCC find no merit to his allegation that he was denied due process.

As to the actual violations, the FCC says that it has received no other response from Vance to the Notice of Apparent Liability. Consequently, based on the information before it, and having examined it according to the statutory factors and in conjunction with the Forfeiture Policy Statement, it finds that neither reduction nor cancellation of the proposed $14,000 forfeiture is warranted.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The $14,000 fine was affirmed on Match 14th. Vance was given the customary 30 days to pay or to file a further appeal. (FCC)

RADIO ROBERY: ANTENNAS STOLEN FROM REMOTE SITE

Ed Tipler, WI6RE, reports via the CGC Communicator on a radio site theft. He says that thieves cut the hinges off a communications tower

fence gate on El Paso Peak, 10 Miles South of Ridgecrest California. They then made off with several antennas from the site.

According to Kern County Sheriff there were other communications sites hit over the weekend of Match 10th. Most took place along Highway 395 from the towns of Boron to Little Lake. (CGC)

**

OPERATING AIDS: CQ MAGAZINE PUBLISHES HF OPERATORS SURVIVAL GUIDE

CQ Magazine has introduced a new HF Operator's Survival Guide that it says is in response to the recent changes in licensing rules and operating privileges for all radio amateurs.

The 16 page booklet was penned by CQ Editor Rich Moseson, W2VU, Contesting Editor John Dorr, K1AR and award winning ham radio educator Gordon West WB6NOA. Its purpose is to welcome those who have never before operated on the bands below 6 meters to the interesting and challenging world of High Frequency Amateur Radio communications in a way that makes it fun to join the crowd.

Among other topics covered are how to choose the gear and antenna that you will need, how to operate on the H-F bands, the individual characteristics of each HF ham band and the various modes and operating activities. Also included is an easy to understand band chart that tells you which license class has what privileges on each band.

The new CQ HF Operator's Survival Guide is available directly from CQ. Contact them toll free at 800-853-9797 for pricing and available discounts for bulk purchases. More is on-line at www.cq-amateur-radio.com. (CQ)

HAM HAPPENINGS: THE NAB HAM RADIO RECEPTION - APRIL 18 IN LAS VEGAS NEVADA

Bob Heil, K9EID, says that Heil Sound will once again be hosting the Amateur Radio Reception at this years National Association of Broadcasters Meeting in Las Vegas. Bob tells Amateur Radio Newsline that this year Heil Sound will be joined by B-S-W Professional Audio Gear of Seattle, Washington to host the event. B-S-W is one of the largest supply companies for the broadcast industry'

As has been the tradition, dozens of prizes will be given away during the two-hour event. Among them will be some Heil Performance microphones signed by famed rock guitarist Joe Walsh, WB6ACU of the Eagles. The date is Wednesday evening, April 18th in the Hilton Convention Center meeting room area in Ballroom B. Check out www.heilsound.com for updates in coming days. (Heil Sound)

**

HAM HAPPENINGS: THE INTERBATIONAL DX CONVENTION - APRIL 27-29 IN VISALIA CALIFORNIA

Also, Bob Heil along with Chip Margelli, K7JA, will be presenting a special seminar titled "Audio Reinforcement in Contesting" at the upcoming International DX Convention. That event takes place April 27th to the 29th in Visalia, California. Also at this years DX extravaganza will be CQ Magazine editor Rich Moseson, W2VU, with a presentation titled "Working Your First 100 Countries" This years 58th Annual International DX Convention is sponsored by The Northern California DX Club. It will be held at The Visalia Holiday Inn Hotel & Conference Center. More information is on-line at www.dxconvention.org (Press release)

**

HAM HAPPENINGS: THE SWODXA DAYTON HAMVENTION DX DINNER.

The 22nd annual DX Dinner sponsored by the South West Ohio DX Association will be held on Friday evening, May 18th in conjunction with the 2007 Dayton Hamvention. The venue once again is the Crowne Plaza Hotel, located in Dayton City Center with Ward Silver, N-0-A-X, slated as the events Keynote Speaker. Further information may be obtained from Jay Slough. K4ZLE, 8183 Woodward Dr., West Chester, Ohio. His zip is 45069 (Press release)

WORLDBEAT - AUSTRALIA: COMMEMORATIVE MICROPHONE DONATED

Australian telecommunications provider Telstra has placed a piece of that nations radio history in the public domain. Graham Kemp, VK4BB, of the WIA News is here with the details:

--

Telstra has given a rare microphone used to open the Sydney Harbour Bridge 75 years ago to the

Powerhouse Museum for all Australians to enjoy.

The Reisz microphone is an example of Australian
technology manufactured in 1930 and was used to
broadcast the 1932 opening ceremony of the Sydney
Harbour Bridge to thousands of people. This
historically significant microphone was signed by
all 10 dignitaries at the opening ceremony,
including NSW Premier John T Lang, NSW Governor
Philip Game and the Bridge's Chief Engineer, JJC Bradfield.

--

Every good piece of history has a story behind it
and this microphone is no exception. Telstra
came into possession of this microphone through
its acquisition of the Overseas Telecommunications Commission in 1993.
(WIA via Sarah McKinnon, Telstra)

CONTEST CALANDER: THEC 2007 MOTOROLA QSO PARTY

Back on this side of the Pacific, word that the
dates of the 2007 Motorola QSO Party have been
announced. Sponsored by the Motorola Amateur
Radio Club of the Illinois Section the event
takes place beginning at 1700 UTC on April 21st
running through 0300 UTC on April 22nd. All hams
are welcome to participate. For more information
e-mail motoham@gmail.com or visit www.qsl.net/k9mot/stations/k9mot/ (AA9VI)

**

DX

In D-X, word that 3D2AG. is active) as FK stroke
FO5RK from Noumea, New Caledonia. He is mostly
on 40 and 20 meter CW and is scheduled to remain there until the end of
April.

And news that DL2GAC is again active from the
Solomon Islands as H44MS. He is expected to be on until April 25th.

Also, K4QD reports hat he will be active portable
HH4 from Haiti through the 30th of March. Listen
out for him on 80 through 10 meters on Morse and
SSB. As in the past, he will operate from the
North West Haiti Christian Mission.

Last but by no means least, members of the Irish
Radio Transmitters Society are operating from
Swaziland, Africa as part of a special DXpedition
to celebrate the society's 75th anniversary. The DXpedition runs to the 30th

March. Look out for members of the AFRI 75
DXpedition on the airwaves, in particular during
St Patrick's Day and during the CQ WPX contest.

QSL al of these as directed on the air. (Various DX sources)

**

THAT FINAL ITEM: A CHAT WITH 2007 RADIO AMATEUR OF THE YEAR JIM HAYNIE,
W5JBP

And finally this week, the 2007 Dayton Hamvention
Radio Amateur of the Year has some kind words for
a lot of people and some interesting thoughts on
the hobby. Of coarse we are talking about ARRL
President Emeritus Jim Haynie, W5JBP, who
recently spoke one on one with Amateur Radio
Newsline's Mark Abramowicz, NT3V. Mark says that
the former ARRL leader still has his hand on the pulse of Amateur Radio:

--

For Jim Haynie, being recognized by the Dayton
Hamvention is an honor hard to put into words.

"Well, I was flabbergasted to be honest with
you," Haynie says, upon receiving word of his
selection. "And it certainly came as a surprise.
It was not something that was on my mind, anyway.
And, it's quite an honor because Dayton is such a
prestigious gathering of people - to be selected
by one's peers, I mean, it's just very, very touching to me."

Among the accomplishments the awards committee
considered in selecting Haynie for the honor was
his leadership in the fight against Broadband over Power Line Internet
access.

Haynie made many trips to Washington and spent
hours and hours on the phone and traveling to
meetings to face the issue head-on. He says it
was worth it and he's optimistic the BPL threat is beginning to diminish.

"I don't feel it's going to go very far in the
near future," Haynie says. "It may be used for
meter reading and stuff like that, but I just see
technology going much further than just Broadband over Power Line.

"The trips to Washington, of course, served
several purposes. One, of course, was to keep the
League's name in front of the legislators and the
regulators. And, I think that's important for the
League to continue to do and I see that they're doing that.

"But this is something that we've got to stay on
and keep up with the trends in that area. BPL is
the buzz word right now amongst the utilities and
I think the League is doing a good job as to monitoring that."

The awards committee also recognized Haynie for
his promotion of Amateur Radio's role in
emergencies and establishing a relationship with
the newly-created Department of Homeland Security.

"Oh, I've always been interested in what the
amateur community can do as volunteers and as
somebody pointed out we're not first responders,
per se," Haynie says. "But there's a great deal
of contributions that amateur radio can make in any type of disaster.

"It's the fact that, again, we have to use our
skills, our knowledge and our training to do that. And, Homeland
Security is, of course, concerned with some higher levels.

"But, nonetheless, there's a lot of things that
amateur radio can do. And, I encourage people to
take advantage of that and actually participate."

Haynie says he's also pleased that another leader
in the BPL fight, Ed Hare, W1RFI, the American
Radio Relay League's lab manager, is being
recognized by the Dayton awards committee with
its special achievement award. Haynie says the honor is well deserved.

"I think he's overworked and underpaid," Haynie
says. "He's one of the best assets the League has
as far as staff personnel goes and extremely
knowledgeable and well respected in the industry.

"You know he sits on a couple of committees, one
of which is the I-E-E-E committee for broadband
specifications I guess is one of the words I
would use. I'm sure Ed would come up with something a little more
technical."

Haynie, who served two terms as ARRL president,
says things have been relatively quiet since
leaving office. But, he says he still keeps in touch.

"I still talk to Joel Harrison, the new president
and I talk to Dave Sumner occasionally, it's just
keeping up the friendship type thing because if
you work together like we have for so many years,
you just don't turn it off," Haynie says.

"They're very capable of doing what needs to be
done and there's no need for me doing any outside
consulting, if you will. I'm enjoying a well

deserved break, in my own opinion, in that respect.

"I've really enjoyed kicking back and just not
having to travel somewhere almost every weekend.
I'm sure Joel is familiar with that now because
there were some years that I traveled six or
seven weekends in a row and I don't miss that at all."

But Haynie concedes there is one thing he misses about the travel - the people.

"I really enjoyed going to the hamfests, the
conventions, shaking hands, stuff like that.
That's the part I miss more than anything else,
is just being out in the amateur community."

Retire? Not Jim Haynie. He says he's back in
business in the Dallas area and loving what he's doing.

"At this point, I've got some other interests,
it's not hobby related, it's job related," Haynie
says. "I've taken on a project that's got me
totally fascinated in the television field actually.

"I'm working here for a company now as their
general sales manager for motel, hotel, and
hospitals in the television industry. That's been
quite fascinating to me. It's a field I never
thought I'd be involved in and now, all of a sudden, I'm knee deep in it."

And, while Haynie says he's taking a little break
from amateur radio to get settled in his new
position, you can bet he'll be back if the need arises.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Jim Haynie and the other award winners will
receive their honors the weekend of May 18th to
the 20th at the 2007 Dayton Hamvention. Amateur
Radio Newsline will be there to bring you all of
the action on what has become known as ham
radio's show of shows. (ARNewsline(tm))

Like... just about all of them. I have a hard time coming up with many instances where it's any of the FCC's business whether I talk on the radio on company time, as long as I'm not being paid to talk on the radio. It's between me and my employer, and the FCC rarely has any jurisdiction or enforcement power over company rules and policies.

467. March 22, 2007 License Numbers

Newsgroup: rec.radio.amateur.moderated
Date: 2007-03-24 02:04:15 UTC
From: N2EY@AOL.COM
Message-ID: <1174698670.018892.250490@n59g2000hsh.googlegroups.com>
Source record: 5065

These are the number of current,
unexpired FCC-issued amateur
radio licenses held by individuals
on the stated dates, and the
percentage of the total number
of active licenses that class contains.

Percentages may not add up to exactly
100.0% due to rounding.

These totals do not include licenses
that have expired but are in the grace
period, nor do they include club, military
and other station-only licenses.

Effective April 15, 2000, FCC no longer issued
new Novice, Technician Plus and Advanced
class licenses, so the numbers of those license
classes have declined steadily since then.

Also since April 15, 2000, FCC has renewed all
existing Technician Plus licenses as Technician.
It is therefore informative to consider the totals of
the two classes, since the Technician class
includes a significant number of Technician Plus
licenses renewed as Technician.

On February 23, 2007, the last Morse Code
test element, the 5 wpm receiving test, was
eliminated as a requirement.

The ARS License Numbers:

As of May 14, 2000:

Novice- 49,329 (7.3%)
Technician - 205,394 (30.4%)
Technician Plus - 128,860 (19.1%)
General - 112,677 (16.7%)
Advanced - 99,782 (14.8%)
Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of February 22, 2007:

Novice - 22,896 (3.5%)
Technician - 293,508 (44.8%)
Technician Plus - 30,818 (4.7%)
General - 130,138 (19.9%)
Advanced - 69,050 (10.5%)
Extra - 108,270 (16.5%)

Total Tech/TechPlus - 324,326 (49.5%)

Total all classes - 654,680

As of March 1, 2007:

Novice - 22,841 (3.5%)
Technician - 293,031 (44.7%)

> and visionaries (so long as they're polite to the other children.

I think that the crux *is* just that politeness though, Hans. When the PSK31 segment (as an example) is stomped on by the robot Winlink stations, who is playing politely? Yeah, I guess we can just move, but won't it be fun to try to figure out where? And our next stop can just as easily be disrupted by whatever wideband mode decides to park itself right over top of us. Eventually a survival of the fittest situation occurs, and I suspect that Winlink stations and SSB would come to be the only modes around. And that would be a real tragedy. No DX windows, no areas in which to search those who pursue the same modes as you seems like a recipe for chaos. And I suspect that the Gentlemen's agreements came about for those reasons, not that the people who came up with such things lacked intelligence or vision.

I look at the framework as a guideline of just where I might like to pursue my particular part of this hobby. If it were just a matter of SSB and OOK CW, it would be one thing, but these days there is OOK CW, SSB, RTTY, PSK31, 64, SSTV, Pactor, and on and on. Many modes, and some don't exist very well together. Not all regulation is bad. In fact excessive regulation and no regulation at all produce strikingly similar results.

Hey there.

I got my Technician ticket the summer after I graduated from high school, bought a little 2M handie-talkie and had a bit of fun with it, but for any number of reasons, left the hobby behind shortly thereafter. Now, I'm getting notices about my 10 year high school reunion and I'm realizing that it's time to renew my ticket.

Last year when I realized that renewal time was around the corner, I figured I'd start getting ready to upgrade to the General License, and started learning the code. Once I'd gotten my sending down to a pretty good clip, though my receiving still wasn't near to 5wpm, they took that requirement away, and now I'm back to having to study for the exam...

So, here's the point of my post: I'm trying to come back to the hobby after a long absence. I have a limited (read hardly any) budget, and an older handie-talkie. I think I'll need more than just local repeater rag-chewing to get me into it the hobby all the way. Anybody have any suggestions?

Also appreciated would be suggestions on beefing up my technical knowledge. I'm afraid I'm probably not even close to having myself up to the level I was at when I took my Technician test... So, I probably have to start from close to a clean slate.

Thanks,
Paul

Almost any country you want to name, with the notable exception of the USA, hands their hams a set of frequencies and charges them to "play politely". I don't see any evidence that this policy is causing any problems.

Even in our country, one mode is given free reign to use virtually any frequency they chose, and we all seem to get along. One has to wonder "if market-based cooperation works for one mode, why won't it work for the others?"

Whatever else you do, renew your ticket. It's easy and free. When you're 90 days away from expiration, visit the FCC web site and request a renewal. Don't put it off thinking that you're going to upgrade and then end up with no license at all.

Ham radio is really many hobbies rolled into one. The aspects that interest me may not interest you, and that's just fine. I agree that there's much more out there in the hobby than the local repeater, and I think you're on the right track exploring the other aspects of ham radio.

Go to the library and spend a little time reading the ham-radio magazines. I'm not suggesting that you read every article carefully, but more that you use the magazine as a way to see what is happening in the hobby these days and what aspects pique your interest. You might think that trying to work DX using low power is interesting, or digital modes might catch your eye.

There's a lot of current information on the hobby available via the Internet. This Usenet group is an example; as you read what others are interested in you may see things that sound intriguing. There are many other web sites on various topics. Of course, you want to employ the same filters that you would use for any topic that you're researching on the Internet; there's some garbage out there too.

As for low-budget equipment, one place to check is eBay. Usual disclaimers apply, but there are some bargains there. (Just be sure you're really getting a bargain; there are some ripoffs there, too.) I recommend eHam for figuring out what all the model numbers really mean; there's a valuable part of their site that you reach by clicking on "Product Reviews" in the left navigation pane. There are other sources for used equipment, including locals who have upgraded their gear.

> Also appreciated would be suggestions on beefing up my technical
> knowledge. I'm afraid I'm probably not even close to having myself up

> probably have to start from close to a clean slate.

Is there a local club in your area? If they have license classes, that's a possible way to beef up your technical knowledge and have a good time. It's always more fun to learn in a group. However, be aware that some of these classes are geared more towards reviewing the specific questions in the exam pools than in actually learning the theory behind the questions.

If you want to actually learn something useful, I'd suggest that finding a knowledgeable local and putting a station on the air would be a great way to accomplish that. Studying the formula for the length of a dipole is one thing; getting out there and building the antenna is an entirely different experience. This may be the best use of that handheld -- if there's an active repeater that you can hit, get on it and meet some of the locals. If you're lucky you'll find someone who is willing to be your elmer.

Good luck, and welcome back. I hope you find a niche in the hobby that interests you; that's what makes the difference between someone who just has a ticket and someone who is actually active in the hobby.

Paul,

Welcome back!

All hams are on a budget, although some have a _larger_ budget than others ;-). Probably the best way to improve your technical skills while building a station is to trade for or buy some older radio and spend the time to get it on the air: there are many "boatanchor" rigs available for reasonable money, provided you're not looking to start with a KWM-2, and the experience and contacts you'll get in the process will also help to get you up to speed.

First, join a local club and ask around about used rigs. Many hams have equipment they used as novices still on a shelf, including receivers such as Drake 2-A's or such, and although code may not be your mode of choice, you can often add a modulator to a novice CW rig and join the AM renaissance on 75 meters for very short money. If you prefer SSB, there are many older rigs that can be had for reasonable cost, especially from other club members, such as Swan 350's or Heathkit HW-101's.

Ebay is a good source for ideas, but I'd avoid it for purchases until you're more familiar with the boatanchor world - parts availability, rigs to avoid, etc.: for now, buy or trade with people you live next to, and you'll do a lot better.

HTH.

Bill

I definitely 2nd the recommendation of the local club.

In fact, what you might want to do is visit a bunch of local clubs. Some local clubs actually have "ham shacks" which you can operate out of. For example, W1AQ in Rhodyland is one such club.

The nice thing about these types of organizations is you can get a feel for what type of activities in ham radio interests you, without investing a great deal of money in your own equipment, only to discover that aspect of the hobby really isn't "for you". Think of it as a "try before you buy".

Plus, being able to operate out of the club shack gives you time to save up for your own equipment, and not become discouraged over time because you're not able to buy something of your own.

And yes, by all means, renew your license. While your activity in ham radio may come and go over time depending on other demands in life, your ham license is always a 'free' ticket to enjoyment at some point, when you decide to pick it up again. Follow Steve's lead and renew through the FCC web site -- it doesn't cost you anything!

Good luck!

It strikes me that we've beat this subject into oblivion without
actually answering Mikes original question.

Actually, the ARRL bandplans (for whatever weight they carry) are
pretty much silent on the topic of PSK31. The mode settled by
convention into a small spot on each band, and the original small
number of players fit nicely into a fairly narrow slot by convention
of usage. Since it's gained in popularity, I think the next logical
step is for the users to start a discussion 'in-band' about annexing
additional nearby territory. I'm not into that mode, but it's my
impression that there's room in most of the data segments for you to
spread out a bit without any particular resistance.

In other words, let the 'market forces' come to bear.

As we all (should) know, towers rarely, if ever, fail in "stick fall"
mode where the fall zone radius is equal to the tower height. The
usual fall mode is a buckling collapse along the length of the tower
resulting in a fall radius of about 10-15% of the tower height.

There was a study made of commercial tower failures several decades
ago that showed this, and I've seen this first hand in some of the
broadcast and comm towers affected by the 1989 Loma Prieta earthquake
in the San Francisco area.

Whether the local building official is sharp enough to know this is an
exercise left to the applicant....!

PRECISELY why the power limit should be ERP, not 1.5KW into a $25,000, 8-
element, 20 meter yagi at 800'.

Rich hams should be using the same ERP as poor hams....easily measured at
monitoring stations in uV/meter.

It is well known that I am a communications attorney whose practice involves dealing with the FCC and other regulatory agencies on compliance matters. One takes things in a 100% wooden sense or one does not succeed in that business.

And as I tell my clients - and a lot of them are hams - if you try to get away with something and get caught, how will you explain it? The :dude" defense - some other dude did it - doesn't go in regulatory matters. I prefer to keep my clients from getting into trouble by giving them the straight scoop, so to speak.

As far as railroading goes, it is well known that that's my avocation and I know the operating rules almost as well as I know the FCC rules. If you think that the FCC rules are complex, you ought to see the Federal Railroad Administration rules!

Because of international treaties upon which the US is a signatory,
the Amateur Radio Service has specific restrictions on what
communications are prohibited and which are allowed.

You, I, and the FCC all agree that it's not the FCC's business WHEN
you transmit, it's WHAT you are transmitting that counts. The
bottom line is you can't use amateur radio for the benefit of the
employer or if you are being paid to operate, with the exception under
which specific organizations (the ARRL is only one of them) can pay
operators for operating.

> It's between me and my employer, and the FCC rarely has any jurisdiction or
>enforcement power over company rules and policies.

In general you are right, as long as the company rules do not require
you to, or give you permission to, violate communication laws.

The most likely failure scenarios are very true, but there is a
credibility issue in these matters. We can speak of failure modes until we
are blue in the face, but a simple worst case fall radius is easy for non-
engineering types to understand.

My lot is 100' on the short side. Using that statistic, assuming I placed a tower in the center of my lot, I should be able to get a permit to erect a 333' (50' / 0.15) tower. Somehow, I don't think I have a snowball's chance in Hades of getting a permit for it. Oh well... it was a nice dream! hi

And all the logic in the world won't help if the local building official insists on using the worst-case scenario or local laws demand it. Frankly, if I was the local building official, I would use the worst-case scenario. The primary responsibility of a building inspector is public safety, and invoking the worst-case scenario seems appropriate in this case.

Amateur radio is an incredibly diverse hobby. The suggestion on reading up is a good one, the suggestion on looking at clubs is a good one, but they really won't give you a very complete view.

Most clubs have some area they gravitate toward. There are many areas of amateur radio that aren't well served by local clubs, either because the activity isn't amenable to the club model, or because a local area just can't support enough amateurs interested in that particular niche.

Many amateurs on a budget are into QRP, and many QRPers are into building. Now, don't get misled into thinking that building stuff is cheaper. Until you have built up a good junk box, it tends to be more expensive. However, the hours of enjoyment might well make it inexpensive on an hours of fun per dollar basis. It won't be cheaper on a watts per dollar basis.

Some have suggested looking for a boatanchor. Personally, I don't enjoy this, and like building, it isn't as cheap as it sounds. *BUT*, if you get to thinking about buying used gear, go to ebay and study the "completed auctions". While I feel a little uncomfortable about buying a used rig sight unseen, the completed auctions section of eBay gives you a clue as to what a particular rig is worth, and what affects its value. I should mention that although I would rather put my hands on a rig before I buy it, I have bought a few things on eBay and have never been burned. There are a few bad actors out there, but generally hams are a likeable lot. Also, don't be afraid to look at new rigs. Many decent used rigs sell for almost as much as new. If there is a huge difference, there is probably a reason. Find someone to talk to about the particular thing that interests you.

Many clubs are into public service. This is another area where you can get a lot of fun for your buck. In this case, typically all you need is an HT. Most clubs that do this are more than able to provide you with any necessary training, and these activities can be a lot of fun.

Most amateurs feel that emergency response is part of their responsibility, although most aren't willing to pay their dues. If you think emergency response is part of your interest, you MUST find your local EC and get involved with your local ARES or RACES group. In this day an age, you must also pass some FEMA courses to be eligible. Hams who show up at a scene with a rig and no training are part of the problem rather than the solution.

Speaking of ARES, your statewide amateur organization needs leaders -- doesn't matter what state you are in. Volunteering your time to make amateur radio better is one of the more enjoyable aspects of the hobby to some, and is also one of the less expensive. Every section has dozens of positions that need to be filled. They range from emcomm positions to public information, to technical coordination to observer. Lots and lots to

be done.

Of course, there are plenty of operating only activities ... rag chewing, DXing, contesting, etc. your Tech license gives you full access to the space above 50 MHz, and there is a lot of territory there for experimentation, if that is what floats your boat.

A lot of hams (at least here locally) thinking of moving beyond VHF seem to feel they need a DC to daylight rig. This is certainly the high priced spread. The rig can often be a minor problem; getting an antenna up in the air that can do a decent job across a wide range of bands can be a bit of a challenge, too. And unless you get into contesting, the reality is that you will only operate on a couple of bands. Single band rigs can be many times less expensive than the fancy rice boxes. Try to understand what sorts of things sound interesting and look at satisfying only those needs if you are on a budget.

Most importantly, though, find some local folks to chat with. This is where a club can be handy. Even if a club is very focused on some particular niche, there will be a few folks with other interests. Find out who they are and knock some talk out of them.

No it isn't appropriate. There are telephone poles near my house that if they were to fall will destroy my house. My neighbors TREES could do the same. Yet most people do not see these as significant hazards. They are used to seeing them so do not think of them as hazards.

I lived in one place where a tree next to my garage had a serious case of heart rot (hollow top to bottom). The tree was all but dead but the owner would NOT remove it because it was still "alive" (i.e. it had about a dozen leaves on one branch on one side of the tree). I could not find a way to force the owner to get rid of the tree. All I could do was to move my car out of the potential damage area when strong winds came up.

As far as towers go, what is appropriate is that it be required to be erected per the manufacturer's design guidelines.

Rather than looking at this from the negative, let's look at it as a real business possibility.

How about designing a series of towers that look externally like tree-trunks? Or, developing camoflauge that hams wrap on the outside of their towers which disguise them (the towers, not the hams) as big oak trees?

Then, likewise, we can design a series of multi-element beam antennas which look like tree branches, complete with fake leaves!

The possibilities (and income potential) is endless!

Of course. People are used to things like Power poles and even think
nothing of hurtling at each other in automobiles carrying liquids that
are almost explosively flammable. In no way does that make either
actually "safe".

They are not quite so used to radio towers however. People have a
fear of the unknown, especially in thies days of safe rooms in houses,
and burglar alarms in gated communities.

And in these days of safety taken to stupid extremes, and housing
developments that won't allow you to have a clothesline in your back
yard, I'm not about to go complaining about that one little restriction
on a potential tower.

I want to install a 2m/440 rig on my boat. Does anybody know of a
2m/440 antenna that:

1) Will work without a ground plane? i.e. be a straight fiberglass tube
like the usual VHF marine band antennas.

2) Will mount on the standard marine layover mounting bracket.

This is definitely on the agenda, regardless of what happens. Only a couple of more months and I'll be in the 90 day window :) Here's a quick novice question for you: if I renew and have moved, will they change my call or do I get to keep it?

> Ham radio is really many hobbies rolled into one. The aspects that

That's a good point. I'd never really considered the fact that it was several different hobbies rolled into one before. This point, and some of the other followups have convinced me to start looking a little deeper into some of the various aspects.

Duly noted. I'm associated with a university currently, and I haven't checked out their periodicals for amateur radio stuff yet, actually, so that's a great idea I hadn't thought of. Thanks!

Yeah, I'm a little leary of buying anything used or new at this point, because I just don't know enough about all of the different modes and facets of amateur radio. There were a couple of good elmer type figures available to me when I first got my license, but though at my last job there was an excellent elmer available, I've never spent good quality time with somebody one on one getting to know things about all the various different things that I can do.

Thanks for the advice. Yeah, the nearby university where I live has a
club. Dues are cheap, and they have a shack with interesting equipment
in it. It's definitely on my list of things to check into.

Yeah, a couple of months back I was looking into buying an HF rig to
see if I could have some fun with that, and most of the rigs in my
price range looked like they were QRP oriented. Though I _do_ have a
great assortment of computer parts lying around, I'm not sure many of
them would be useful in building my own rig :)

Honestly, since I have no idea what I'm really interested in still,
I'm way leary of buying used equipment, particularly over e-bay. I'm
just not sure what I want/need/will use. So I hear you on this one.
"Try before you buy" sounds mighty nice.

Due to family circumstances, time is kind of a scarce commodity right
now, too. However, ARES and RACES have sounded appealing to me in the
past. Thanks for the tip on the FEMA courses. I'll have to check
into those, as well.

Code actually _is_ one of the things that interests me, believe it or
not. And, honestly, like most of the other responses I've gotten have
noted, buying an older rig would probably be the best route for me to
go, in terms of learning my way around again. Thanks for the tip on
Drake 2-A, I'll have to look into those.

You keep your call sign unless you specifically request a change. Keep in mind that if you request a new sequential call sign that Techs and Generals will receive 2x3 calls as there are no longer any 1x3s available for sequential assignment.

By the way, if you don't have an FRN, you need to get one and have it associated with your call. See the Universal Licensing System web page (it's part of the FCC site) on getting one. You should take care of that now. Then you can get a password and renew online. Otherwise you'll have to file paperwork to renew.

Great! Thanks for the tip. I just signed up for my FRN, and archived
the info, so a month from now when I can renew. Done and done!

I would like to encourage people who read this and think, "Oh, that must be complicated" to actually go to the FCC web site, as Dee suggested and Paul did, and register. It's a very simple procedure. This is one of those excruciatingly rare occasions when you really do get something for nothing. (Oh, wait. Taxes. Right. I *am* paying for that FCC web site, after all.)

Yeah, I can second that. It took me about 30-45 seconds after I found
the link off the arrl.org home page. Just for the permanent record,
here's the address you go to:

http://wireless.fcc.gov/uls/index.htm?job=home

And just follow the instructions there. It took me about 5 minutes
start to finish.

According to my map, it's just over 3 hours from your QTH to FDIM. Go to http://www.qrparci.org and sign up for the Thursday events. There will be a paper on micros in homebrewing. There will also be a bunch of great papers. The FDIM activities on Thursday are so good you are kind of disappointed when Friday comes around and it's time for Hamvention! If you can't afford to do the whole, four-day gig, don't miss Thursday.

You are pretty close to the two best hamfests around, Dayton in May and Findlay in September. Dayton is kind of a zoo, but there is noplace with so much stuff, and so much opportunity to see stuff. Findlay is far smaller, and far more laid back. It is almost the anti-Dayton. Perhaps for that reason, it is the most enjoyable hamfest. But nothing beats the day before Dayton!

Dee mentioned that you should go ahead and get your FRN. This isn't too hard and you can do it right away. Once you have it, you won't believe how easy it is to renew.

..

It's not just familiarity, though. Buildings and utilitity poles
are usually subject to detailed codes regarding their
installation and maintenance. Those codes are based on
extensive experience about what works and what doesn't.

A radio tower is more of a custom installation and requires
special attention.

I agree that using the worst-case fall-circle rule for a
properly-installed radio tower is usually more restrictive
than is needed.

There are situations where the worst-case scenario
applies, IMHO: Field Day and similar temporary installations.
In those cases, where a tower, mast, pole or antenna may fall should
always be considered. Putting a Field Day station
at the base of a temporary tower may look idyllic but is not
a safe practice.

> Of course. People are used to things like Power poles and even think
> nothing of hurtling at each other in automobiles carrying liquids that

There's safety and then there's the *perception* of safety.
Driving/riding in autos is one of the most dangerous things
most people do routinely, based on the death and injury
rates.

> They are not quite so used to radio towers however. People have a
> fear of the unknown, especially in thies days of safe rooms in houses,

> on a potential tower.
>
IMHO, that's how restrictions get a foothold.

First it's some little rule that doesn't really seem to make much
difference, even though it's grounded more in
fear than in good engineering.

For example, as Dee points out, the utility poles could fall over and
cause extensive damage, but they're not restricted the way towers are.

Then there's a little expansion of the rule. Maybe it's the fall
circle plus ten percent. Or twenty five percent.

A little here, a little there, and pretty soon you need a property a
couple of hundred feet in every direction to put up a fifty foot
tower.

This may sound absurd, but I'm old enough to remember a
time when, if someone suggested a no-antennas restriction
on houses, they'd have been laughed at because practically
everyone wanted to watch TV, and to do that required a
decent outdoor antenna. Then cable came along and now
they're SOP.

Surely. I can't explain the contradictions, but I suppose that those who
practice those contradictions don't give it a second thought. Another one
along the same lines is that people fear for their health from a 60 Hz HV
line several hundred feet from their house, but doin't have a problem
with sticking their head in the near field of a cell phone and talking
for hours a day like that.

>> They are not quite so used to radio towers however. People have a

They not only can, but they do! We see that one all the time.

That's a mighty slippery slope there Jim! 8^)

If I go into a zoning meeting trying to get a waiver to the "restriction" in my neighborhood so that I could put up a tower larger than allowed, I wouldn't get too far with terms such as "very unlikely" and typical failure mode" They are going to "worst case" me in a big way. And I'm not so sure that if I was a zoning officer that I wouldn't do the same. The question I would ask: Is it physically impossible for the tower would fall straight over at the base? If you can get expert evidence that it is impossible, I might consider it, if not, I will advise you to be glad that you are living in a modern village development that allows towers, but you will have to be satisfied with a tower within the prescribed limits.

People tend to be more afraid of the unknown. Cars are known.

> Another one
> along the same lines is that people fear for their health from a 60 Hz HV
> line several hundred feet from their house, but doin't have a problem
> with sticking their head in the near field of a cell phone and talking
> for hours a day like that.

I think a better example is to compare apples to apples:

Some people fear the effects of power-line fields, but not the
fields from their house wiring and appliances - even though the
latter may be much stronger because they're so much closer.

Some people fear the effects of being near cellphone towers,
yet not the effects of using a cellphone whose fields are
stronger because they're closer. Opposition to cell towers has
caused the cellphone folks to install lots of small cells rather
than a few big ones, and to use disguise antennas - including
some that look like trees.

Both are cases of ignorance of such basics as the inverse
square law.

This is not to say that RF and power-line fields have no health
effects at all, just that the real risk factors are often
misunderstood.

I could discuss this for a while here and there, but a cement truck driver
could talk on 2m while driving his truck BUT said driver could not use his
radio to talk to the dispatcher about where to deliver his load.

Like I said it's an analogy--an illustration.

I'm glad you're on our side, can you help with self-defense if I accidently
print and loose my other license here in TX?

Getting on the air on a budget:

Go to a hamfest and pick up one of the older radios. There are some
deals to be had with old hybrid radios. Kenwood made some really nice
ones. There are some old Yaesu hybrids out there also. Of course, if you
get lucky, there are some deals on more modern ones also. I picked up an
Icom IC-745 for 250 dollars at a hamfest.

Next get a tuner. MFJ makes some decent HF tuners, and used are pretty
inexpensive.

Get some ladder line, enough to make it from the shack to wherever your
antenna is going to be.

Put up as much wire as you can. Feed it, and tune it.

My original setup cost me less than 350 dollars to get on the air, and
I had 80-10 meter operation (160 too if I didn't mind poor performance.

Note: If you want to go REALLY cheap, I picked up a couple of the old
single sidebander Heathkits at Dayton last year, mainly to learn about
tube radios. 20 Bucks apiece, and they worked. One band only per radio -
I got 40 and 80 meters.

Dayton is indeed a zoo, but it's a fun zoo.

There have been no changes in radio theory, and very minor rule
changes which affect Extra, so if you understand the material, any
study guide going back to 1990 or so should work just fine,
supplemented by a quick review of Part 97.

Consider that if it's a guyed tower the top guy wires would have to
extend out a good deal more than 50 feet from the base.

Knowing what it costs to buy and erect and maintain a 333 ft tower --
common for some broadcast stations - do you have a snowball's chance
in Hades to afford it? If so, can I be one of your buddies? <g>

Supposed to be are the keywords I think, Phil. We always hope the officials have their jobs through competence. I think it's also important to get along with the neighbors, so I would want to convince them of likely safety too. In our case, our one set of neighbors would probably understand, but the others might be a hard sell. All very nice folks, but the one couple has a technical background.

We live in an age where a lot of people get their physics education from Bugs Bunny and Road Runner cartoons. It takes a lot to educate them in how things actually work - especially when their misconceptions are so much more entertaining! ;^)

I believe that the questions that might have been different between
than and now aren't being used at the moment to avoid confusion (band
edges come to mind). With the changes over the last six years, the old
book won't be accurate.

Otherwise, there is a lot of similarity in the question pools.

You could also download the pool online and give it a look.

Your advice got me to thinking. What are the advantages and disadvantages of buying ham gear at a hamfest, versus buying it on eBay or via the various classified ads?

There's no doubt that going to a hamfest is fun. It's a place to meet people, see equipment (both old and new), and generally have a rich social and learning experience. There's likely to be some interesting gear for sale, especially at the larger events. You can see what you're buying, and you don't have to worry about shipping (or the seller just taking your money and not sending the gear).

But buying via eBay or classified ad has its advantages, too. You can research the features of the rig, using things like the eHam reviews, to be sure that it really meets your needs. If you're willing to wait, there's a more complete selection of equipment, so if you're in the market for something specific you're more likely to find it. You can check recent sales to build an idea of a "fair price".

I'm a bit hesitant to suggest to a new ham that they go to a hamfest and buy equipment. I'm afraid that the equipment-buying experience at a hamfest is too intimidating to a new ham. It requires more knowledge of what's what, and how to size up what's a good deal, than most new hams possess. Now if they have a buddy to help them, that's different.

Which gets us back to the point that several have made in this thread -- the importance of making contact with the local ham community.

70ft and they can't regulate..?! Wow, things are certainly different your side of the water..! Here in the UK it varies depending on where in the country you are, but where I live we need planning permission from the local authority for anything that raises its head above roof level..! Although there is retrospective permission for anything that has been in place for some time (I believe 5 years but I'm not certain) without complaints. Certainly I've never had any issues about my small VHF/UHF colinear at around 25ft..!

There's a cellular tower in Bainbridge, NY, I think, visible from along I88 which was objected to until some wise guy (who it was or on which side of the equation was, I don't know) suggested constructing the tower so that it looked like a fir tree. Ok, you say, that's a reasonable compromise -- except they constructed it as a *huge* "pine tree" -- overtowering (if you'll pardon the pun) every other pine tree for a hundred miles around. I don't think they're likely to do that again!

I'll give you an example of how it works in the REAL World.....

We, (Local Residents) wanted to have the Borough (County) build a
small bridge across a 30 ft wide creek, so that we could connect
two seperate Road Systems, locally. There was a bridge in this
location, built by the Army Corps of Engineers in WWII, that had
decayed, and collapsed 30 years ago, but the abuttments were still
in good shape. The Required Permits to install the new Bridge
were all in place, EXCEPT for the Alaska Dept. of Fish & Game's
Habitat Division, which needed to pass on the permit, because
the creek was a Salmon Spawning System. Now you have to undestand
that this is a nothing project, ($60KUS) on a nothing creek,
(There are literally thousands of similar Creeks in our neighborhood -
Neighborhood = 100 Square Miles) in the middle of NoWhere, Alaska.
Habitat Division was staffed by "Greenie" Fish Biologists with absolutly
NO Knowledge of Civil Engineer, and little pracatical experience outside
the Degreed University Program they came from. It took us Three (3)
Years of "Blood, Sweat, and Tears" to get the last signoff, and it
finally took the President of the Alaska Senate, to hold up the Budget
for ADF&G in Committee, untill they were within 24 Hours of having to
send everyone home, because they couldn't Pay them. The first Official
Act of the, then New Governer, Frank Merkowski, 15 minutes after he was
sworn in, was to eliminate the ADF&G Habitat Division, fire ALL the
Biologists, and transfer the Permitting to the Depatment of Natural
Resources. Two weeks later there was an Ad in the Help Wanted of all the
Alaskan Papers looking for Civil Engineers with PE Stamps, and Fish
Habitat Experience, to work for Alaska's DNR. They hired three, in
short order, and the backlog of 8 years of Permit Applications (500+)
were dealt with in then next 9 months. During the previous 8 Years only
12 permits were issued.

You'll probably pass, but you would get some of the band and privilege edges questions wrong if you read the old pool questions and took the new test. Even from the new pools. That's why they took them out temporarily.

A long time ago, when taking a test for my first technician job, there was a question that read:

Q. What is the melting temperature of solder?

There were 4 different answers, all within the range of the various solders Ag/Pb percentages that I was used to. 60/40, 50/50, etc.

Coming from a school where the teachers would throw in a trick question every so often, I circled all 4 answers, and put in a note that all were acceptable melting points, depending on the alloy.

The head Technician called me in with the test results. I aced it except for one question. He explained that 370 F was the correct answer. I explained that that was true for 60/40 solder, but not for other combinations.

He pulled out the test grading sheet, and said "According to this, you're wrong."

Wanting the job, I said "Well, I guess I am wrong!"

Da boss is always right....

I've had two experiences on Ebay. One buying, and one selling. Both were bad. When buying, the stuff wasn't as advertised, and under selling, the buyer never showed up. Leaving bad feedback isn't much in compensation.

I simply love going to Hamfests. The socializing is fun. Lots of bad food to eat too! Lots of interesting people to watch. If I had one complaint, it is that Hamfests are similar to flea markets in that they are starting earlier and earlier. Dayton is one exception, except for Sunday morning.

> But buying via eBay or classified ad has its advantages, too. You can

My XYL has a rule that I like. "On presently manufactured radios, if it isn't 50 percent off new, buy new." On older stuff, if you can't see and touch it, let someone else have it. Nothing like that warranty for me.

Collectors will have a different outlook, of course.

Your point about Eham is excellent, Steve. In fact, I would suggest anyone who is interested in getting equipment should browse through their reviews. I've spent more than a few entire evenings at their site. I would note to the prospective buyers that they read the reviews in addition to looking at overall ratings. There are some Hams out there who never met a radio they didn't like! ;^) And a few who are really picky.

Yup, It's always good to have an Elmer with you until you learn the ropes.

The Hamfest also has one experience that I really love - even if some don't - the discussion driving the sale. I just love that give and take with the person selling the equipment. Unfortunately, some sellers don't do this, but when I "lock horns" with a seller that knows how to deal, we both have a great time.

Having taken all three written elements just a month ago, I have to disagree slightly. The amateur extra element (prepared by the ARRL VEC) had a number of "distracting" questions and correct answers that required some careful study, both before and during the test. I have nothing against that, having seen that thing in many different similar-format written tests before but the theory material by itself may not be enough.

I never saved any QPC pools in the past so I can't compare old versus new. While questions on radio theory were (few) straightforward, I had to review a number of detailed areas concerning space operations and data/packet modes and practices to feel fully confident before taking the tests.

Regulations have changed slightly since a decade ago (from my 1995 five-volume Title 47 set concerning Part 97) but those must, in my opinion, be memorized beforehand. In actual practice there are many versions of bandplans in the form of charts (I like Icom's nicely-colored ones) to use when operating. Actual numbers as used in the tests need memorization to pass them correctly.

I'm sorry to hear this. I've had perhaps a half dozen experiences with eBay, all buying, and not all fo this was ham gear. I've never been disappointed. I picked up an absolutely gorgeous Vibroplex bug, and the seller packed it such that it could have been delivered by catapult and would have arrived intact.

The moral of the story, I think, is that there are both good and bad experiences to be had any time you buy anything. I've had bad experiences related to buying new stuff, too. There's a lot you can do to reduce the probability of getting burned, but it can never be reduced to zero. The alternative is to never buy anything, and that's no fun either.

> I simply love going to Hamfests. The socializing is fun. Lots of bad
> food to eat too! Lots of interesting people to watch.

You mean the guys who have more radios hanging from various parts of their body than I even own? <grin>

The one thing that depresses me about attending hamfests is observing the aging ham population and the lack of diversity. I can't shake the thought that these events won't be around in another decade because so many of the attendees will be too old to be there.

> My XYL has a rule that I like. "On presently manufactured radios, if
> it isn't 50 percent off new, buy new."

I like that. I continue to be amazed at some of the items that sell on eBay for more money than it would cost to buy them new. Not ham gear so much, but with beekeeping equipment it is truly amazing. I've checked some completed sales and compared prices for known items with the price listed in the current catalog, leaving me just shaking my head.

> On older stuff, if you can't see
> and touch it, let someone else have it. Nothing like that warranty for me.

The warranty is certainly worth a lot, as is the simple fact that the gear is coming directly from the factory and you know it hasn't been abused. But sometimes with the older stuff, seeing doesn't really help that much since it's unlikely you'll actually be able to apply power and

do a smoke test. I'm never enthusiastic about buying a piece of gear at a hamfest (for other than parts) after hearing the seller utter those magic words, "Oh, it works great."

> Your point about Eham is excellent, Steve. In fact, I would suggest
> anyone who is interested in getting equipment should browse through
> their reviews. I've spent more than a few entire evenings at their site.
> I would note to the prospective buyers that they read the reviews in
> addition to looking at overall ratings. There are some Hams out there
> who never met a radio they didn't like! ;^) And a few who are really picky.

Oh, absolutely. The individual reviews are by far the most valuable, but you do have to read with a grain of salt. You have to judge whether the specific piece of equipment might have been a lemon, or perhaps the person who wrote the review was the lemon. And you're right; some people never met a radio that they didn't like. But nothing beats the real-world experience.

> The Hamfest also has one experience that I really love - even if
> some don't - the discussion driving the sale. I just love that give and
> take with the person selling the equipment. Unfortunately, some sellers
> don't do this, but when I "lock horns" with a seller that knows how to
> deal, we both have a great time.

Yep, I understand, having watched my wife enjoy that experience many times, especially in foreign countries. But it's not one that I enjoy. Different strokes for different folks.

One of the options I didn't think about until after I submitted the original article is buying used gear at a commercial ham radio store. If I did that, I would insist on the right to bring back the specific piece of equipment for full credit on another purchase within some period of time, perhaps 90 days. I don't know if the stores do that these days, but it seems reasonable to me, and would provide an advantage to buying the gear through the store as opposed to directly from the owner.

A book that old (pre-2000) would also need to be supplemented by the
companion Advanced study guide as the current exam (since 2000) combines
these two groups of material. Back when these were separate, the most
difficult theory questions were on the Advanced exam.

Good link Larry.

Of course, if a person rote memorizes the tests, they might be in for
an umpleasant surprise when the take the real ones - certainly the Extra.

Another test practice site is

www.aa9pw.com/radio/java/index.html

By the way, I found no surprises on test element 4 in regard to
memorizing the regulations, especially the bandplans. :-)

One of the loudest sources of RFI I ever had was a UPS that almost
oblitereated the AM radio band making it near impossible to tune an old 5-
tube 'all american' style GE receiver. When I localized the source it
quickly became misc. parts never to bother me again. Sorry I can't send it
to you to play with.

cheers,
chuck...

I've also had a couple of experiences on E-bay, I sold a refrigerator,
was a good experience, and I tried my absolute best to cancel a bid once
with no luck--a very bad experience.

<snip>
>
> My XYL has a rule that I like. "On presently manufactured radios, if
> it isn't 50 percent off new, buy new." On older stuff, if you can't see
> and touch it, let someone else have it. Nothing like that warranty for me.

I grew up on a farm/ranch out side of "classic-smalltown", Texas.
Everything we got we ordered from either Sears or Montgomery Ward;
Shoes, shirts, basic household equipment as well as farm equipment was
all ordered mail-order.

At times we got what we wanted, other times we didn't--even from big
name stores such as Sears or Wards. Then we'd have to box the items
back up and send them back for credit... wait for the credit paperwork
(refund check) to arrive and then re-place the order. This could take
weeks and you're walking around in shoes with holes in them--for instance.

That's when I decided that I wanted to try-on what I buy--be it clothes,
or any sort of equipment. I want to turn it on, twist the knobs and
take it for some sort of test drive.

I try to always buy new, although I've only had one new HF radio since
I've been a ham. I've had new handy's for VHF/UHF and new VHF/UHF
mobiles but only one new HF, the rest have been used, and I'd been much
better off getting new then.

For years I would not even consider getting on HF because each and every
time I went to get on HF my 'used' radio would not work, I'd have to fix it.

I had not been on HF since 2001 and in 2006 I decided to try HF again,
and true to form, I turned on my HF rig and one of the large caps in the
PA decided to explode... and I mean explode.

I turned around and bought a new HF rig the very next day. I made more
contacts in the next week than I'd made in the previous eight years
total. Mainly because I didn't have to work on the radio to make it work.

Working on the radio each time I wanted to tune up took all of the fun
out of radio for me, for I wanted to do on HF what I was able to do on
VHF/UHF; i.e.: talk.

Now, I'm HF active as well as VHF/UHF and I'm really having a good time
on the bands.

As it does here. The Federal requirement is "reasonable accommodation
by the least restrictive means" for heights suitable to conduct the
desired communication. In addition to the Federal standard, the
various states have also enacted nearly-identical statutes (local
authorities and courts are much more comfortable dealing with state or
local requirements as compared to the exact same thing imposed by the
"Great White Father in Washington"! <g>

Oregon is only one of two (I believe) states whose statutes specify a
height up to which "reasonable accommodation" is presumed by operation
of law.

In some respects you're preaching to the choir!

My wife just retired (actually took "on call temp" status) as an
electrical utilities and instrumentation engineer with the largest
environmental engineering company in the country, so she (and by
osmosis, I) got to know the "bunny-huggers" up close and personal. In
their specialty they are great. In engineering...that's why she had
a job!

It's no different in my field. A large part of my work with the
Commission was educating the outside professionals (and occasionally
some "inside") in what regulatory practice, and especially GOOD
regulatory practice, was all about.

That's cos Australia and the US don't have a reciprocal agreement.

I'm dual citizen of Australia and the UK, and I can use my VK call in the UK
for up to 3 months if visiting. Not that I'd want to cos I still got my UK
license :)

I am surprised that the US don't issue temporary visitors licenses though.
Aus and UK do that.

They used to, I had to get them when I used to visit the US before they
implemented CEPT T/R 61-01. The FCC called them "Alien Permits" which
always made me feel I should have been landing in a flying saucer rather
than a 747..!

The US does allow non-citizens to operate in the US, either through
treaties such as the CEPT and CINTEL arrangements or through specific
reciprocal agreements.

What he is referring to is that if one is a citizen of the US, one
must get a US license to operate where the US has jurisdiction
regardless of what multiple citizenship or other licenses one holds.

That closed a very big loophole where US citizens would somehow get a
foreign license in a country where the standards for licensing
depended on who you knew and who you could pay off, and then operate
in the US under a reciprocal agreement without ever taking an FCC
license exam.

This restriction is not unusual. Forty years ago when I lived in
Israel they issued me 4X4UQ because I met all the examination
requirements. This was before the reciprocal licensing agreement and
CEPT came into being and one had to have an Israeli license to operate
there. When I returned to the US I had to give up all claims of
Israeli citizenship in order to work for the U S Government (FCC).
Even returning for visits I cannot reactivate or use that call sign
unless I immigrate again and if I do so I cannot use my US call sign
under the CEPT agreement as I can when I am a short-term visitor.

As a UK citizen, I can use my Australian license in the UK so long as I am visiting for less than 3 months. After that time, the privilege expires and I have to get a UK license. Much the same as driving licenses.

Doesn't the US do the same?

Amateur Radio Newsline(tm) Report 1546 - March 30, 2007

Amateur Radio Newsline report number 1546 with a release date of Friday, March 30th, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T. The ARRL kind of changes its mind on Regulation by Bandwidth, European hams get interference protection from ultra wideband operations, Scouts world-wide plan to celebrate 50 years of their Jubilee On The Air and our annual April 1st report from roving reporter Pierre Pullinmyleg. All this and more on Amateur Radio NewslineT report number 1546 coming your way right now.

(Billboard Cart Here)

**

REGULATION BY BANDWIDTH: THE ARRL VS THE BLOGGERS

The ARRL has partially changed its mind on Regulation by Bandwidth. It now suggests confining these changes to 10 meters and above. But even this has not placated the detractors of both the League and the proposed rules change. Amateur Radio Newsline's Mark Abramovich, NT3V. reports:

--

The ARRL says in the wake of the recent changes to the Part 97 Amateur Radio rules, it has revised its regulation by bandwidth proposals to the FCC.

The League says this is being done to avoid some unintended consequences and temper some of the controversy the original petition had aroused.

But bloggers on QRZ dot com and elsewhere in cyberspace seem to consider the revision nothing more than a smoke-screen.

Some look at it as a sellout by the national organization to the proponents of digital communications to the detriment of all others in the hobby.

The bloggers also say that almost any form of digital ham radio will disrupt most or all of the current

communications on all bands and therefore must remain segregated into subbands of its own.

By way of review, back in November 2005 the ARRL filed a Petition for Rule Making dealing with the concept of Regulation by Bandwidth.

RM-11306 requested the FCC replace the current segregation of modes by subbands with a regulatory scheme that would segment bands by necessary bandwidths ranging from 200 Hz to 100 kHz rather than by emission mode.

This proposal immediately brought the wrath of the high-frequency ham radio community.

Through filings to the FCC and by numerous cyberspace web postings, the ham radio community told the ARRL and the FCC that regulation by bandwidth was simply not wanted.

Now the ARRL appears to be capitulating.

At least to the extent where the high frequency bands below 28 Mhz are concerned.

In a statement published in the ARRL Letter, League Executive Vice President Dave Sumner, K1ZZ, said that:

Regulation by bandwidth rather than by mode of emission remains controversial below 28 MHz because of its perceived potential impact on established operating patterns, so these proposals were removed from the list with one narrow exception.

The ARRL now is urging the FCC to adopt what it terms a "subset" of the rules contained in its original petition that largely affects only the amateur bands at 28 MHz and above.

If the FCC adopts the League's revised proposals, the 10, 6 and 2 meter amateur bands would be segmented into subbands allowing maximum emission bandwidths of 200 Hz, 500 Hz, 3.0 kHz 16 kHz or 100 kHz.

The only exception would be for double-sideband, full-carrier AM phone.

This modified proposal is already drawing fire from several factions in ham radio.

First are the proponents of weak signal communications on 6 meters and above.

They fear that the introduction of any form of wideband modes close by weak signal segments will spell disaster.

They contend it will raise the ambient noise floor of the bands, rendering it impossible to detect the minute traces of RF that they are searching for.

As one post on QRZ put it: "Digital 100 khz wide signals thousands of them 100 kHz wide only 175 kHz from the 6 meter calling frequency and 100 kHz from 2 meters and the noise floor will go through the roof."

Also not happy are the operators of FM repeaters on 2 meters.

They point to the already overcrowded conditions in both of the repeater subbands.

They also ask the rhetorical question of how and where can numerous 100 kHz wide digital modes be shoehorned in without degrading the performance of existing analog FM communication?

Most believe that wideband digital and 2 meters simply do not mix. Others do not want them on any band below 1 point 2 Gigahertz.

On the other side are the proponents of digital on the High Frequency bands.

They believe that the ARRL is caving in to pressure brought by current H-F spectrum users.

Some involved in rescue radio operations have already warned that in the near future emergency communications systems used by the agencies that they serve will go to wideband data-based communications systems.

They warn that for ham radio to continue to serve its emergency communications clients, the rules must be changed so that Amateur Radio is fully compatible with that technology.

Another bone of contention is why the ARRL continues to pursue any form of bandwidth-based regulation in the face of across-the-board opposition from the ham community.

Dave Sumner seems to address this in his comments in the ARRL Letter:

Regulation by bandwidth provides a better regulatory framework, not only for the introduction of future digital emissions but for the protection of traditional narrowband modes as well.

Unfortunately for the ARRL, not everyone agrees.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

K1ZZ has expressed the hope that the subset of RM-11306 modifications offers an alternative that will make it easier for the FCC to move at least part of the way in that direction. Even so, the analog ham radio world appears to be gearing up for a fight to maintain the status quo. (ARNewsline(tm) with input from numerous sources including ARRL Letter, QRZ.com, eHam.net, VHF Reflector, others.)

**

REGULATION BY BANDWIDTH: AN ARNEWSLINE ON-LINE POLE

So what's your thought about the idea of converting from the current subband system to regulation by bandwidth? To get an idea we have set up a pole on our website at www.arnewsline.org. Just go there, scroll down and watch for the word "Polls" on the left hand side of the page. Then click on the box that is closest to your view.

The nice part about the software we use is that the results are instant. As soon as you cast your vote you will see the result.

And before we get a horde of e-mails from those who need to point out the flaws of electronic polling, we freely admit that this poll is not very scientific. In fact it is easily subject to multiple voting from those with a personal ax to grind for or against regulation by bandwidth.

That said, after a few weeks the cumulative results will at least give the ham radio community an idea on the way the majority feels on this subject. One that can and likely will affect the day to day operation of every radio amateurs across the United States. (ARNewsline(tm))

THE BPL FIGHT: SUPPORT NEEDED FOR HR-462

Supporters of congressional measure HR 462 are fearful that the recently announced the IEEE Broadband Over Powerline Standards Project announced last week could hamper efforts to get the measure enacted.

HR-462 is better known as the Emergency Amateur Radio Interference Protection Act of 2007. If passed, it would require a study by the Federal Communications Commission on interference caused by broadband internet transmission over power lines.

The measure is currently before the House Energy and Commerce Committee. Proponents say that the IEEE project

seems to give the aura of respectability to BPL which they feel is not deserved. They believe only legislative pressure can force BPL providers to use non-interfering technology. They also urge all hams to write their political leaders in support of HR-462.

The March issue of QST Magazine has the full background on this bill. (K2IVX)

RADIO RULES: EUROPEN HAMS TO BE PROTECTED FROM UWB INTERFERENCE

The European Commission has decided to impose more stringent rules on the use of ultra wide band equipment on frequencies below 6GHz. In essence that protects hams from interference the mode might cause. Jeramy Boot, G4NJH, is in Nottingham in the UK with more:

--

The decision is a victory for a host of amateur radio groups which have been fighting for greater regulation of ultra wide band.

Amateur radio organizations including the Radio Society of Great Britain, the UK Microwave Group, AMSAT-UK, BATC and the Chelmsford Amateur Radio Society have put in a lot of work over the last two years making the case for protection of the amateur bands from ultra wide band devices. The European Commission appears to have listened.

In an official statement published on the web, the Commission said: "The conditions in the 4.2 to 4.8GHz band for ultra-wideband technology should be time limited and be replaced by more restrictive conditions beyond December 2010."

The statement went on to say that in the long term ultra wide band equipment should be restricted to operating above 6GHz.

Jeramy boot, G4NJH

--

A link to the statement can be found on the RSGB website. Its in cyberspace at www.rsgb.org (GB2RS)

RESTRUCTURING: THAI HAMS GET CONTEST ONLY PRIVELEGES

E21EIC and others report that the Radio Amateur Society of Thailand has received authorization from that nations telecommunications regulator for Thai operators to operate on 80 and 160 meters during 2007 contest periods. During those periods Thai operators may operate their stations on CW and SSB from 1.800 to 1.825 MHz and 3.500 to 3.536 MHz. Split operation has also been authorized.

Stations in Thailand currently can only operate on 40, 20, 15 and10 meters. They are barred from 30, 17, 12 and 6 meters, however, activity on the WARC bands and 6 meters is sometimes granted with special permission. (OPDX, others)

RESCUE RADIO: CLUB EXPANDS SKYWARN IN INDIANA WITH CLASS

Amateur radio operators in Monroe County, Indiana have been turning the annual National Weather Service's severe weather spotter training program into a public outreach event. Jack Parker W8ISH has this report.

--

Severe weather spotter training in Monroe county, Indiana has been taken to the next level. Through radio, newspapers and the internet the Bloomington Amateur Radio Club has expanded training to include emergency professionals and the general public. This years Severe Weather Training had over one hundred and thirty people in attendance.

Each year Monroe county hams schedule the class on the first Friday in March. That coincides with the start of Severe Weather Prepardness Week in Indiana.

History has shown Bloomington and Monroe county to be a prime target for tornadoes. Getting the general public, government officials and first responders trained can only add to the number of eyes and ears needed to warn the public of a severe weather outbreak.

This years class was followed up with a series of radio interviews on WHCC radio in Bloomington. Radio

personality and self proclaimed "weather junky" Rick Evans, invited amateur radio storm spotters to talk about their chasing experiences during Severe Weather Week. The interviews aired live during the morning commute. The early bird reports included severe weather safety tips and background on the role amateur radio plays in emergency and public service events.

Reporting for Amateur Radio Newsline, this is Jack Parker W8ISH

--

This years class included 2004 ARRL Educator of the Year award winner Neil Rapp WB9VPG and Indiana State Representative Matt Pierce N9VKU. (KB9WVI)

RESCUE RADIO: NPSTC AND ARRL SIGN MOA

The ARRL and the National Public Safety Telecommunications Council have signed a Memorandum of Agreement. As reported on the ARRL's website, under the pact the League's Chief Technology Officer Paul Rinaldo, W4RI, will participate in meetings and serve on committees and working groups. The League also has agreed to provide other expertise, advice and resources to further the goals of the Memorandum of Agreement.

For its part, the National Public Safety Telecommunications Council has agreed to provide a National Support Office. Among other things, it will coordinate its outreach activities and provide national level technical assistance to the public safety telecommunications community.

The National Public Safety Telecommunications Council is a federation of public safety organizations. It serves as a forum for the exchange of ideas and information for effective public safety telecommunications in the US and abroad.

The ARRL is a National Public Safety Telecommunications Council member. The Memorandum of Agreement culminates efforts begun in 2003 to formalize the relationship between the two organizations. The full story is on-line at www.arrl.org (ARRL)

**

ENFORCEMENT: STAY OFF UNTIL YOU RENEW YOUR LICENSE

The FCC has written to a now former ham to tell him that his license has expired and that he must go Q-R-T. That

February 28th note went to Thurland Bristol Jr. Of Orange, Connecticut. In it the FCC says that Bristol's license and K1ACD callsign expired back on July 5th of 2005 and that operation without a valid license could bring with it some severe penalties. As his ticket is within the Commission's two year grace period all he needs to do is to renew it to bring it current once again. (FCC)

**

ENFORCEMENT: TO MANY CALLSIGN CHANGES

The FCC wants to know why a Texas ham has filed over two dozen applications that first request and then cancel four specific callsigns. That's the question that they ask of Barney Boone, NO5R in a letter to him dated February 28th.

The note to Boone asserts that May of 2000, he has filed 25 or more applications with the regulatory agency regarding the calls W5JB, AI5L, KC5KJG and KJ5AE that either requested or cancelled one of those calls. The FCC says that 10 of those applications were filed in 2006.

The FCC says that once requested and cancelled, the calls were made unavailable to anyone else for a period of two years. The agency says that this appears to be an abuse of the agency's application process and gave Boone 30 days from receipt of its inquiry letter to respond and explain his actions. He was also told to choose which one of the call signs that he wanted to keep. (FCC)

**

ENFORCEMENT: KIT BUILT TRANSMITTERS BRING $7000 NAL

The FCC says that Richard Mann who does business as The Antique Radio Collector in Toledo, Ohio is apparently liable for a $7000 forfeiture. This for allegedly marketing of uncertified AM radio transmitters in repeated violation of the Communications Act and of the Commission's Rules. Amateur Radio Newsline's Jeff Reinhart, AA6JR, reports:

--

On November 15, 2006, the FCC's Spectrum Enforcement Division issued a Letter of Inquiry to Richard Mann and The Antique Radio Collector. This, in response to a complaint alleging that the was marketing fully-assembled S S TRAN model AMT3000 AM transmitters.

In a reply dated November 25, The Antique Radio Collector indicated that it was not aware of a certification authorizing a fully assembled AMT3000 transmitter. The

response indicated that Mann had purchased the transmitters in kit form from a third party and assembled the them in his residence. Mr. Mann advertised the assembled transmitters for sale online at www.oldtimeradio.com and had sold a number of completed units to end users since December 2003.

But the FCC says that buying a banned radio transmitter as a kit and building it expressly to sell it for profit is the sane as marketing a fully factory assembled unit. It says that Section 302(b) of the Communications Act provides that no person shall manufacture, import, sell, offer for sale, or ship devices or home electronic equipment and systems, or use devices, which fail to comply with the agency's regulations. As such it would be Mann's responsibility to obtain FCC certification before offering any units for sale which he did not do.

For the Amateur Radio Newsline, I'm Jeff Reinhardt, AA6JR, in Los Angeles.

--

Mann and The Antique Radio Collector were given the normal 30 days to pay the fine or to file an appeal. (FCC)

HAM RADIO AND SCOUTING: AROUND THE WORLD IN 50 HOURS

Around the World in 50 Hours will be the theme of this years Scouting Jamboree On The Air. JOTA as it is better known, is an annual event in which about 500,000 Scouts and Scout Guides all over the world make contacts with each other by means of Amateur Radio.

The idea of the 50 hour operating schedule is to honor the golden-jubilee of the Jamboree by extending it two hours. One hour for every year that it has existed. As a result, this years 50th JOTA will run from October 19th at 22:00 hours to October 21st at 24:00 hours your local time.

An official start will be given by the World Scout Bureau radio station in Geneva, Switzerland on October 19th at 21:00 h GMT with a transmission in the 20 and 80 meter bands and on Echolink. (WIA, GB2RS, Southgate)

**

EMERGING TECHNOLOGY: NEW DIGITAL HAM RADIO REMAILER FORMED

A new cyberspace remailer dedicated exclusively to the emerging world of digital Amateur Radio communications has been formed on Yahoogroups. This reflector will primarily

discuss the use of digital voice and data communication techniques on the VHF and UHF bands. Technology to be addressed will include D-STAR, APCO P25, packet radio including APRS, High Speed Multi Media, Wi-Fi, P-S-K and F-S-K. To join the group just take your web browser to http://groups.yahoo.com/group/illinoisdigitalham/ and follow the sign up instructions. (WB9QZB)

**

HAM HAPPENINGS: PAPERS SOLOICITED FOR ARRL AND TAPR DIGITAL CONFERENCE

Technical papers are solicited for presentation at the 26th Annual ARRL and TAPR Digital Communications Conference to be held September 28th to the 30th in Hartford, Connecticut. These papers will also be published in the Conference Proceedings.

Authors need not attend the conference to have their paper included in the Proceedings. Papers will be published exactly as submitted and authors will retain all rights. The submission deadline is July 31, 2007. Please send papers to Maty Weinberg , at the ARRL , 225 Main St , Newington, Connecticut, 06111. Submissions can also go by e-mail to maty@arrl.org (ARRL)

**

HAM HAPPENINGS: THE 12th ANNUAL IOTA DINNER IN APRIL

The 12th annual Islands On The Air or IOTA Dinner will be held on Friday, April 27th, in the Birch Room of the Holiday Inn Hotel and Conference Center in Visalia, California. This, in conjunction with the 58th annual Visalia International DX Convention.

Reservations for this event are not required and attendees will pay as they enter at the door. Admission is free for those wishing only to watch the programs without dining. As usual, seating will be first come, first seated.

For additional information regarding this event, please contact Jim Zimmerman, by e-mail to jimzim1@mindspring.com (Press release)

**

SPECIAL EVENTS: HAMS CELEBRATE THE TITIANIC'S 95th ANNIVERSARY

Ham radio will help to memorialize one of the greatest tragedies ever to happen on the high seas. To commemorate the 95th anniversary of the sinking of the luxury liner

Titanic, radio amateurs worldwide will be mounting an operation originating from the Titanic Museum Attraction in Branson, Missouri. That's where members of the Nixa Amateur Radio Club will be making contacts world-wide using the special event callsign W-Zero-S.

Three stations will operate simultaneously using SSB, and CW. Trhere will also be operation using Echolink. All stations will be manned by operators from a consortium of clubs and non-club members from across Southwest Missouri, as well as licensed visitors from outside the area.

Operations beginn at 8 a.m., Saturday, April 14th, and concluding at 7p.m., Sunday, April 15th. The W-Zero-S call being used which stands for White Star. White Star the name of the company that built the Titanic.A U-K group is also expected to be active during that same time as GB6MGY. That reportedly was the actual call sign of the Titanic. More information is on-line at www.nixahams.net (W7ZVD)

A WORD OF THANKS FROM THE SUPPORT FUND WITH ANDY JAREMA N6TCQ

Ladies and gentlemen, with a word of thanks to those who contributed to the Newsline Support Fund in April of 2006, here's Amateur Radio Newsline's Support Fund Administrator Andy Jarema, N6TCQ.

--

In the month of April we heard from Regular contributor Benton Bonney, W4PE of Orlando , The Potomac Highlands ARC of Moorefield, WV, The Cookville, TN Repeater Association, W4HPL, monthly contributor Joseph Bartzi, Jr., KC8DKF of Columbus, OH and monthly contributors William Walters, WA2IBM, and Scott Hensley of the Area Communications Team, both in San Jose, CA, and the South Orange Amateur Radio Association

Via PayPal we heard from C Mark Burlingame, KB6TVD of Northlake, IL and Stuart Cole, N5LBZ of Gulfport, MS.

Month in and month out Newsline takes an average of $1000 to put the latest news of Amateur Radio on the air- it doesn't come to us- we have to go get it. With no advertising, we depend on you- our loyal listeners. Our website- arnewsline.org has all the info you need to contribute, including a quick link to PayPal. Or there's our address: Newsline Support Fund, PO Box 660937, Arcadia, CA 91066. That address will be repeated at the end of the newscast. Thanks for your help.

I'm Andy Jarema. N6TCQ.

--

Thank you Andy. (ARNewslineT)

**

RADIO OPPS: PETER THOMAS VE7PT IS NOT A SILENT KEY

If you happen to be a fan of the British comic group Monty Python then the line "I'm not dead yet, I'm just resting" will have a great deal of meaning. And it's also what may be going through the minds of the editorial staff at The Canadian Amateur magazine after it learned that it made a big oops in reporting the departure from life of a Canadian ham. Bruce Tennant, K6PZW, is here with the rest of the story:

--

Well it happened this way. The March/April 2007 issue of The Canadian Amateur carried a listing in the Silent Key column saying that Peter Thomas, VE7PT, had passed on. Only one problem about this for the magazine. It seems that Peter was and is definitely not a Silent Key.

It was all explained in a March 19th special bulletin issued by Radio Amateurs of Canada which publishes The Canadian Amateur. It seems that the mix-up came about when an obituary in local newspapers was spotted for a "Philip Thomas" in which it was stated that his interests included ham. It also listed his callsign as being VE7PT. And dutifully, the information was re-reported by the Canadian Amateur magazine but did not bother to check on the accuracy of the initial report.

Well the good news is that the real VE7PT is very much alive. In fact, the R-A-C release describes him as an active 86 year-old living in British Columbia and a 25 year retiree who still enjoys being active in the hobby. He is a member of the Westcoast Amateur Radio Association, the

Victoria Area Packet Association, and he particularly enjoys training new hams by having them visit his shack. And although VE7PT is no longer sailing the high seas, Peter is an honorary member of the Blue Water Cruising Association. A very active radio amateur indeed.

Radio Amateurs of Canada has apologized to VE7PT and to his many friends and family for the error.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Kind of reminds us of the words of Mark Twain who once sent a telegram to the press all across the United States. This, after an erroneous obituary about him had been published. That cable simply said: "The reports of my death are greatly exaggerated." (RAC, others)

**

HAM RADIO IN SPACE: DONATIONS NEEDED FOR NEW ARISS STATION

The European Space Agency has agreed to an amateur radio station being installed onboard the Columbus module, the new space laboratory that will be attached to the International Space Station at the end of the year. As part of the station a series of antennas developed at Poland's Wroclaw University of Technology will be attached to the panels that protect Columbus's hull from meteorite debris.

The cost of installing the antennas will amount to more than 100,000 Euros which is in the area of $120,000 in U-S dollars. ARISS-Europe is the amateur radio group which is organizing the project. It is calling on radio amateurs around the world with an interest in space communications to provide financial support.

Although work is progressing well on the antennas, money is still needed to build the amateur radio equipment onboard Columbus. You can find out how to donate to the project on the web at www.ariss-eu.org/donations.htm. (ARISS-EU)

**

DX

In DX that's on the air, word that Clive Penna, GM3POI, has become the second ham to achieve 9 band DXCC using only Logbook of The World electronic QSL confirmations. John Sluymer, VE3EJ, in Ontario, Canada was the first.

Also, news that DL9MWG, will be active from Malta as 9H3RT. This, from April 28th through May 11th. Activity will be on the High F requency bands mainly on C-W. Q-S-L via DL9MWG.

PA5CW, will be active portable YB9 from Bali from April 25th to May 10th. No other info provided at this time.

Lastly, keep an ear open for DL2GAC in the Solomon Islands who is once again active as H-44-M-S. Bernhard is expected to be there until April 25th. The "DX Newletter" reports that he is collecting QSLs for his U.S. Counties Award as well as 5 Band Worked All States from there. His activity is mainly on 80, 40 and 20 meters. QSL direct or via the bureau to DL2GAC.

(From various DX news sources)

**

THAT FINAL ITEM: HAM RADIO AND FURSUITS - AN APRIL 1st REPORT FROM THE ROAD

And finally this week, a question. What do ham radio, fur and the YouTube website have in common? Well if you said hidden transmitter hunting, you would be pretty much correct. Here's our roving reporter Pierre Pullinmyleg with his annual early April report:

--

Zee Hyena is zee very interesting anna-mil. Zay are moderately large and are native to Africa and India. So, it iz very rare zat you find one on zee streets of a town in zee U-S-A much less one zat likes to go on zee transmitter hunt. But if you go to zee YouTube dot com website you just might run into a ham radio operator dressed in zee Hyena costume who talks about finding zee elusive hidden T: Ok, it is a human in a Hyena suit who is also a ham:

--

KD8AYJ: "My name is Julie Fraedrich, I currently live in Streetboro, Ohio, and my callsign is KD8AYJ."

--

Ah, you are surprized zat it's a young lady zat is wearing zee Hyena costume? Well, if you get to talk with Miss Julie, she will tell you zat zee video was fun to make:

--

KD8AYJ: "At the time, I had just gotten my brand-new new Samsung Mini-DV camera and I just had to have an excuse to

play with it. I put on my Hyena costume because I saw another video on YouTube of a group of people who are actually fox-hunting in animal costumes. I said that this is 'so cool' so I put on my animal costume and I decided to talk about fox hunts."

--

Zats right. Zere really is a convention where hams go to T-hunt dressed up as annna-mals. It is called Anthrocon and Miss Julie sez zat zere are really similarities between making zee annamal costume and being zee ham radio operator. She says zat both are challengzes:

--

KD8AYJ: "Ham radio like animal costuming is a challenge in itself. Some are in ham radio to get that optimal signal. Sometimes you are in it just to see how you can operate ham radio with the very basic or primitive tools in situations such as Field Day."

"I think that I was drawn to animal costuming and to do Amateur Radio in the animal costumes just from the challenge of the two. If you were to look at it from an event diagram perspective, both incorporate challenges. Some people build their own Amateur Radio gear and some people like to build their own animal costumes. I think that people who like to do both -- you know -- fox hunts and animal costumes -- like at Anthrocom, they just have overlapping similarities."

--

And where can you wear ze anna-mal costume and mingle with other radio amateurs?

--

KD8AYJ: "Anthrocon is a convention that features and bases itself on people who come from all over the world to wear their costumes for an (extended) 4 to 5 day weekend. And, of coarse they do have fox-hunts there. They have a mobile fox-hunt and a stationary fox-hunt where people wear their costumes doing -- which is pretty neat and is one of the things that drawed me to make my own animal costume in the first place."

--

A very fun story, no? Yes? And remember zat zee Hyena always has zee last laugh.

On zee road, I am Pierre Pullinmyleg, reporting for zee Amateur Radio Newsline.

--

If you want to see Miss Julie and her Hyena costume that she calls Jixser, just go to www.youtube.com and search for "What happens when you combine fursuits and amateur radio?"

And if you want to hear more about how she got interested in costuming and Amateur Radio, tune into this weeks RAIN Report for part one of an in-depth two part interview with her. Its on line now at www.therainreport.com and on the phone at 773-249-0720.

And oh yes. Happy April 1st.

There is no requirement to get a US license if one is operating under
a CEPT/CITEL/reciprocity agreement as long as the person is not a US
citizen. If s/he is a US citizen, a US license is required from day
one regardless of any dual citizenship and licensing held.

546. Before and After Cessation of Code Testing

Newsgroup: rec.radio.amateur.moderated
Date: 2007-03-31 06:48:43 UTC
From: AF6AY <LenAnderson@ieee.org>
Message-ID: <1175317206.980115.47870@b75g2000hsg.googlegroups.com>
Source record: 4851

Prior to the cessation of code testing for US amateur radio
license testing, there were a number of speculations on what
would happen in the amateur radio ranks. To see what really
happened I looked at www.handata.com information and selected
the 30-day period prior to 24 January 2007 (or 30 to 60 days
prior to end of code testing) and the 30-day period just after
23 February 2007:

FCC Action Ending 24 January 2007 Ending 24 March
2007

---------------------- --------------------
New Licensees 1,342
2,941
No Longer Licensed 2,101 2,975

Class Changes 985
7,234
Callsign Changes 214
897
All Updates * 16,536
17,418

* Includes Renewals, Address Changes, etc.

30-day Period ending 24 March begins approximately 23 February
2007.
30-day Period ending 24 January begins approximately 24 December
2006.

The number of Updates, primarily Renewals, is about the same for
the
two periods. Expirations are about the same, allowing for the
perterbation of the year-end Holiday of Christmas and New Years
when no or little testing is done. It should be noted that
Expirations
are generally higher than the number of New amateurs entering. One
reason for the lower number of New Licensees in January may (or may
not) have been a "waiting period" between the announcement of the
FCC 06-178 R&O on code test elimination and it taking effect near
the end of February.

Most significant are the Class Changes indicating that major
activity
was Upgrades, a 7.3:1.0 ratio. Callsign Changes were less at about
a 4.2:1.0 ratio. License Class totals show the distribution of

Upgrades a bit better:

License Class As of 24 January
2007 As of 24 March 2007

Technician 310,195 (+870) 307,730 (-3,998)
Technician Plus 41,343 (-840) 39,242 (-1,208)
Novice 29,429 (-243) 28,892 (-291)
General 142,428 (-323) 147,186 (+5,129)
Advanced 76,889 (-335) 76,084 (-475)
Extra 111,423 (+6) 112,231 (+775)
Club 10,313 (+53) 10,402 (+56)
TOTAL 722,020 (-812) 721,767 (-12)

Total less Club 711,707 711,365

Numbers in parentheses indicate the change in class totals from the start of that particular 30-day period.

There is a significant increase in the number of General Class licensees through March and a near similar decline in numbers of Technician Class indicating that many of those new Generals probably came from the Technician Class.

All those in their 2-year Grace Period are included. Since we don't
know if those are just letting their license lay until it expires or are too busy right now or otherwise occupied, I am including them
since the FCC allows them to pick up where they left off if they decide to renew before that Grace Period is up.

73, Len AF6AY

Are you sure that you've given it enough time? How many non-hams
know anything about any of this? It will probably be years before the
results are in.

The Changing Operating Classes
Over the past year the Technician class has increased at an average rate of
13/day.

The Tech Plus class has decreased at an average rate of 27/day.

The Novice class has decreased at an average rate of 9/day.

The General class has increased at an average rate of 7/day.

The Advanced class has decreased at an average rate of 12/day.

The Extra class has increased at an average rate of 6/day.

Club Stations have increased at an average rate of 1/day.

As the de-facto entry-level license in ham radio, I would expect it to increase the most of all the license classes.

> The Tech Plus class has decreased at an average rate of 27/day.
> The Novice class has decreased at an average rate of 9/day.
> The Advanced class has decreased at an average rate of 12/day.

Since the FCC is no longer issuing any of these licenses, it is mathematically impossible for them to "increase" at all. The very best they could do would be to maintain their exact numbers, assuming a 100% renewal rate and a 0% upgrade rate out of these classes into others.

> The General class has increased at an average rate of 7/day.
> The Extra class has increased at an average rate of 6/day.

Or, a combined rate of 13/day, the same daily rate of increase in the Technician class license. An interesting statistical fluke?

Yes, an accurate portrayal won't be possible until some time in the future. However, this day is only the end of March and the code test ended on 23 February 2007. I was showing what was thought to be the beginning of a trend, based on the FCC database information as collected - en toto - by third parties. As far as I can see, the FCC database numbers are "what really happened" in the 30-day period following (and including) the day that amateur radio license testing excluded the code test.

Disclaimer: The numbers for the 30-day period ending 24 March will be skewed slightly in (approximately) the first week of code test elimination. That is a result in delay of applicant test results being delivered to the various VEC headquarters, re-checked, then (if VEC approval occurs) being delivered to the FCC. That delay time is unknown but can be speculated as at least a week, perhaps two weeks.

As a benchmark for comparison, I used the 30-day period which began during the start of US year-end holiday time, when the code test was mandatory for General and Amateur Extra license classes. I did not download and save either the publicly-posted Hamdata or ARRL statistics prior to that time on a daily basis. Note that the earlier period can also be "skewed" since the Technician class license has not required a code test since it was first created by the FCC in 1991.

I may be erroneous in the assumption that the end of code testing was a landmark decision of major proportions in United States amateur radio. That news has been a topic of news and conversation of organizations and news and discussion sites about amateur radio for at least two years. For references there are www.qrz.com, www.eham.net,

several equipment classified ad websites, QST, CQ,
Popular Communications magazines, and newsgroups,
all concerning US amateur radio policies and practices.
I am aware that a few radio-interested individuals were not
up-to-date on the cessation of code testing...but, in fairness,
the majority of individuals were cognizant of the end of code
testing and exceptions to that do not adequately eliminate
the majority awareness.

Argument aside on the veracity of information that is
available, there is no real evidence that the end of code
testing resulted in any great tidal-wave of "no coders"
suddenly appearing in US amateur radio. There was a
very evident condition of many already-licensed who
applied for, and got, "upgrades" to General and Amateur
Extra class licenses. I am not approving nor disapproving
of that practice, just showing the result of publicly-
available numeric information gathered and presented in
a format for comparison of two selected time-periods.

I have to apologize to readers for the very un-neat
appearance of my tabulations. Those were done in
fixed-size typeface in Notepad off-line and its
conversion to Google-accepted message format
destroyed a neat columnization of numbers of fixed-
font. If anyone wants the original text of columnization
I will be happy to forward that in private e-mail.

The above is identical to the home page data shown at
www.hamdata.com and reflects the changing class
numbers one month (plus a few days) after the ending
of US amateur radio license code testing.

In the year prior to cessation of code testing, the no-code-
test Technician class license growth had been in the
vicinity of 28 to 30 per day average...with General and
Amateur Extra class growth at half (or so) the values
shown above. The only conclusion I can draw from that
growth is the upgrading of Technicians to General or

Extra, lessening the "growth" of Technicians due to their class change.

Curiously, there has been a growth of Club licenses granted in the last year. I would have thought that Club licenses were relatively static since the overall licensee totals showed little growth or decline in numbers?

Ace,

The numbers you posted above are derived from the
hamdata.com website. Nothing wrong with that, of course,
but those numbers include licenses that are expired but
in the grace period.

The numbers I post are current/unexpired licenses. Here's a
comparison of the 361 days between April 2, 2006 and March 29,
2007, using the numbers of current, unexpired licenses
held by individuals on those dates:

(first number is April 2, 2006, second is March 29, 2007
Per-day changes are rounded to the nearest integer)

Novice: 25614 \ 22473 decrease of 3141 (~9 per day)
Technician: 278860 \ 288960 increase of 10100 (~28 per day)

Technician Plus: 40534 \ 29402 decrease of 11132 (~31 per day)
General: 133682 \ 136061 increase of 2379 (~7 per day)
Advanced: 72819 \ 68507 decrease of 4312 (~12 per day)
Extra: 107768 \ 109371 increase of 1603 (~4 per day)

Total all classes: 659107 \ 654774 decrease of 4333 (~12 per day)

Extrapolation from such limited data may or may not
be representative of a trend.

The daily variation of the license totals can exceed the
apparent growth, too. For example, on February 23, 2007
the total number of current FCC-issued amateur license
held by individuals was 654,710. On March 29, 2007,
the total was 654,774, which looks like a growth of 64.

But in between the daily total has fluctuated all over the place. On
March 16, 2007, the total was 655,025, and on
March 19, 2007 the total was 654,094. That's a variation of
931 in just three days! Of course those are extremes, but you can see
how much of a different conclusion could be drawn depending on which
days you choose to compare.

Over time the trend will become clearer, but a month is
a very short baseline.

> > As far as I can see, the FCC database numbers are "what

They are certainly one indicator. There are others.

IMHO, it is more accurate to use the number of current,
unexpired licenses rather than including those in the grace
period. Renewal is free, easy and can be done several
ways including online. Why would any licensed amateur
with continued interest allow the license to be in the grace
period without renewing?

> &#65533; &#65533;I may be erroneous in the assumption that the
> end of code
> &#65533; &#65533;testing was a landmark decision of major proportions in
> &#65533; &#65533;United States amateur radio. &#65533;

When the debate over Morse Code testing was going
on, "growth" was one of the main reasons given to
remove it. I saw many claims that the number of US
amateurs would continue to shrink unless all Morse
Code testing was eliminated, and that many "otherwise
qualified people" would flood into Amateur Radio if all
code testing were eliminated. So far, that doesn't appear
to be happening.

But it's only been a bit over a month. Perhaps there will be long-term
growth, perhaps not. The numbers will tell the story over time.

I'm flying to Baltimore tomorrow morning and driving to Rockville, MD for a daylong series of meetings. I'll have my Kenwood TH-F6A with me. What are the best repeaters (frequencies and PL tones) in Washington and northwest suburbs where I can pass the time while stuck in traffic, and maybe get some help getting around and past the traffic jams?

Thanks...

Please forgive me for not having a working crystal ball. The
figures for April to December 2007 and all of 2008 were not
available to me. :-)

However, some "trends" should be clearly visible:
1. There was a sudden jump of seven times the number of
upgrades in a 30 day period as compared to the 30 day
period two months prior.
2. There was a sudden jump of four times the number of
license class changes in a 30 day period as compared
to the 30 day period two months prior.
3. There was an approximate doubling of the number of NEW
(never before licensed) amateurs in a 30 day period as
compared to the 30 day period two months prior.

>The daily variation of the license totals can exceed the
>apparent growth, too. For example, on February 23, 2007

>held by individuals was 654,710. On March 29, 2007,
>the total was 654,774, which looks like a growth of 64.

I specifically used a 30-day period as an averaging scheme
and such averaging over time is quite common in sensing
trends in statistical work. Day-to-day variations DO occur
but a total of actions in a 30-day period do have a smoothing
effect and come closer to an average.

Note that most of the VEC testing schedules are monthly or
bi-weekly.

>IMHO, it is more accurate to use the number of current,
>unexpired licenses rather than including those in the grace
>period. Renewal is free, easy and can be done several
>ways including online. Why would any licensed amateur
>with continued interest allow the license to be in the grace

>period without renewing?

For several possible reasons:
1. Death, natural, suicide, or as the result of (2).
2. Accident or stroke (or similar medical problems) not allowing full use of communications faculties.
3. Spousal or family or friends' disapproval.
4. Extended military or business relocations.
5. Incarceration or arrest (rare).
6. Growing dissatisfaction with amateur activities and/or policies.

Now, item (6) might be debateable, but then observe that your conditional "...with continued interest" implies that no other reasons are valid, including the possibility of growing dissatisfaction. I don't choose to argue that point with you since the rest of your posting appears too confrontational and argumentative.

I merely compared two 30-day periods based on the numbers available to all on www.hamdata.com, a service provided by them and one that is derived from FCC database information which is available to the public. I trust in the veracity of that information since it compares well with other Internet-access sources of statistical information, also derived from the same FCC database. The conclusions I came to were my own observations, not my "opinion" nor of having any preconceived notion of what "might" happen...only that some did speculate on "what would happen" in other discussion venues.

I have PDFs of the downloads I used and will ZIP them up and send them privately via e-mail attachments to anyone having a valid Internet address. That includes a "nice" formatting of my original post. If there are errors between my numbers postings and the www.hamdata.com numbers, I will acknowledge those errors. At this point I don't believe there are any errors in my postings' numerical values.

I agree that this is a very non-intuitive result at first glance. One
reasonable explanation would appear to be that there was a lot of
pent-up demand for club licenses from over the relatively long period of
time during which they were not issued, which was from at least 1978 to
1995. The official FCC answer on the subject of club and special (i.e.,
"Vanity") callsigns during that time was that it was too much of an
administrative burden to grant them. The FCC was also using a
relatively inflexible, legacy Honeywell system to track and issue
amateur radio licenses. Those that held licenses during that time,
licenses that were impact-printed on smudgy carbon "burst" forms, might
note that they were only issued one day a week (Thursday, I believe).
Existing club licenses could be renewed, but if they expired and passed
out of their grace period without renewal, they could not be reissued.
I understand that the grandfathered club licenses were tracked by the
FCC manually in an index card catalog.

I can attest personally to the fact that when members of the local
amateur radio and USAF veterans' communities noticed that the FCC was
going to allow club licenses and vanity callsigns again, they jumped at
the chance to recover a couple of them that had expired many years ago.
This included the base MARS/military-recreation station at Offutt Air
Force Base, K0AIR, and the personal Nebraska callsign of General Curtis
LeMay when he was the Commander-in-Chief of Strategic Air Command,
K0GRL. The club that was formed to hold these callsigns, and use them
for special events like Veteran's Day/General LeMay's birthday, has a
home page at:

http://www.sacmarc.org

Other local clubs availed themselves of the opportunity to obtain
special, distinctive callsigns for repeaters, contest stations, to honor
deceased members who made significant contributions to the

hobby/service, and the like. I think that the FCC has struck an appropriate balance between allowing a reasonable number of such club callsigns for legitimate use (such as to identify different stations or operational missions and resources) on one hand, versus discouraging callsign hoarding/banking on the other. I feel that it is appropriate to recover distinctive callsigns to honor deceased amateurs who made significant contributions to the hobby/service, and place them in special trust/usage. As long as it doesn't degrade to the point that huge swaths of desirable callsigns are taken out of use for other amateurs. I recall a "Tank McNamara" comic strip some years back with two team managers looking out over the starting lineup of a baseball game. One says to the other something like, "Maybe we should stop retiring numbers," as all of the players had increasingly lengthy, and tiny, numbers on the backs of their uniforms.

The period between 1995 and 2007 is twelve years.

In that interim there have been a number of abuses of the Vanity
callsign system, most notably by Roy Tucker of southern
California who once had the Tucker family holding 41 callsigns,
all at the same street-city address. That is now down to a mere
twenty or so. :-)

History of the Vanity callsign system noted, the FCC now has a
nice page on its website for applications of Vanity callsigns as
well
as renewals and other administrative changes. The FCC will
immediately accept and process credit card fees for a Vanity
call ($20.80) through another govenment agency link but they

also explain that "it may take weeks to fully process [them]."

> The period between 1995 and 2007 is twelve years.

That's true. So, it's probably not the only explanation, especially if
annual growth of club licenses has been increasing recently. In my
opinion, other plausible explanations based on more recent trends could
include:

- More amateurs being aware of the opportunity to establish club
stations (I know there's been recent debate in many forums regarding

how long it takes word of FCC action to trickle down into the general amateur radio population and become common knowledge. It's probably not twelve years, but it might not be 30 days, either.)

- Fewer bureaucratic hurdles to obtaining amateur radio licenses in general, due to a debugged Universal Licensing System, VEC handling of club licensing applications, and clearer documentation by the FCC, the ARRL, and other entities regarding how to apply for and renew licenses

- An aging amateur radio population that desires to establish more legacies for callsigns held either by clubs or notable individuals

- A fear that another embargo of similar or greater length might happen in the foreseeable future

- A desire to establish club stations for Elmering/recruiting purposes, or to give amateurs of modest means or those under antenna restrictions access to more capable stations at all bands including HF, especially in light of licensing requirement changes

- Or even just clearer and more permissive feedback from the FCC concerning clubs obtaining 1 or more callsigns, both by statement, and by enforcement action, or lack thereof (see link below)

> In that interim there have been a number of abuses of the Vanity
> callsign system, most notably by Roy Tucker of southern
> California who once had the Tucker family holding 41 callsigns,
> all at the same street-city address. That is now down to a mere

In addition to flexing some welcome enforcement muscle against obvious abusers like the Tuckers, the FCC was also kind enough to make a clarification of policy about 8 years ago:

http://www.arrl.org/arrlletter/99/0709/#hollingsworth

so club license applicants may no longer feel that they would be making themselves the "guinea pig" or "test case."

A while back I purchased an Icom V8000 with the mars cap conversion (136-174 mHZ) to use as a business band radio. Although the PTT gives me trouble now and then.... I really like the radio and i was thinking of getting one for the house to use as a base.... the Icom PS125 compatable with the V8000?

JD

The V8000 transmitter will only output on the 2m band. Its
receiver already tunes 136 to 174 MHz, stock.

While the PS-125 outputs 13.8 VDC @ 25 A maximum, the connectors
of that and the V8000 aren't compatible. I got mine at no extra
cost on an Icom deal through end of March, but the normal by-itself
price is $300, too much for my thinking; there's plenty of 13 VDC
@ 25 A regulated supplies out on the market. PS-125 case is styled
to match the Pro line and the smaller mobiles (used at home) and
looks nice.

The V8000 needs only a 15 A maximum 13 VDC supply (1 A on
receive) so a PS-125 would be running cool at home. All current
Icom manuals, brochures, spec. sheets are downloadable at

www.icomamerica.com

With the "mars cap conversion" claimed by the author, the V8000 will
both transmit and receive in the range 136 - 174MHz. It's use on
"business band" is then possible, but not legal, without regard to the
power supply selected.

WORLDBEAT: IRAQ HAM RADIO BLACK-OUT CONTINUES

The shut-down of Amateur Radio in Iraq could
continue for a long time. This according to
several reports that quote officials of the Iraq
Amateur Radio Society. Amateur Radio Newsline's
Jeff Reinhardt, AA6JR, has the details:

--

The Iraq Amateur Radio Society says through
Internet postings that it has turned down a
government request to warehouse all ham gear
owned by Iraqi radio amateurs. This is because
its simply to dangerous to go out and collect the equipment.

While Iraq's ham populace may not be radiating
R-F, they are still communicating with
one-another and with the outside. This, world
using Echolink and other V-O-I-P systems over the World Wide Web.

This was confirmed earlier in a posting to the
QRZ dot com website where Iraq Amateur Radio
Society President Diya Sayah, YI1DZ, indicated this would likely be the
case.

Sayah wrote -- and we quote: "Echolink, CQ100,
the Internet, cellphones are still working and we
had several ham radios working now using these
instead of RF." The term "ham radios" in this
case referring to operators not actual gear.

The Iraqi ham radio blackout affects anyone operating an Amateur station from that nation. That includes its citizens, outside contractors and even members of other nations military who are stationed in Iraq.

For the Amateur Radio Newsline, Im Jeff reinhardt, AA6JR, in Los Angeles.

--

As previously reported, the Iraqi Ministry of Defense last month ordered that all Iraqi radio amateurs remain off the air until improvements are made in what it terms as that nations overall internal security. Some political observers in the West believe that could take years if not decades to happen. (Various)

THE DX WORLD: SWAINS ISLAND IS ON THE AIR

The long awaited N-8-S Swains Island DXpedition is on the air! The first contacts were made at just past 10:00 U-T-C on Wednesday, April 4th with literal pile-ups already reported on 80, 40 and 20 meters.

By the time this newscast goes to air, the 17 member team should be active on all of the High Frequency bands from 160 through 10 meters. They are also carrying moonbounce and weak signal gear for use on on 6 and 2 meters. The primary modes to be used will be SSB and C-W but they will be operating W-S-J-T-65 on 50.375 MHz and 144.375 MHz for their Earth-Moon-Earth operations.

Radio New Zealand International which has been following the Swains Island DX-pedition planning says that in addition to the ham radio aspect of this expedition, the group will be delivering supplies, such as tents, equipment and food items for those living on Swains. Also that the ham radio team will donate an Amateur station and a generator to ensure communication is always available between the isolated atoll and the outside world.

The N-8-S team plans to be on Swains through April 15th. Up to date information on this operation is on line at www.yt1ad.info/n8s

We will have more DX at the end of this weeks newscast. (Various DX remailers, Radio New Zealand International)

**

HAM RADIO IN SPACE: HAM SPACE TOURIST TO LAUNCH APRIL 7

If all goes as planned, space tourist Charles Simonyi KE7KDP, should be on the International Space Station by the time many of you hear this newscast. As we go to AIR, THE Russian Soyuz spacecraft carrying Simonyi is slated for liftoff at 17:30 U-T-C on April 7th.

The launch was to be carried live on both NASA and E-S-A television. Once on board the I-S-S, Simonyi plans to use one of the ARISS stations for contacts with students at four schools as well as possible casual contacts with hams on the ground.

After his stay, KE7KDP will return to Earth with members of the departing Expedition 14 crew. They are being replaced by Expedition 15 which is made up of Russian cosmonauts Fyodor Yurchikhin, RN3FI, and non-ham Oleg Kotov. U-S astronaut Suni Williams, KD5PLB, will remain on the I-S-S. Her tour of duty was scheduled to span portions of Expeditions 14 and 15. (ARISS, Southgate, others)

**

THE BPL WAR: AUSTRALIAN BPL INTERFERENCE VIDEO RELEASED

The fight against interference caused by access B-P-L continues down-under. This with the release of a new 8 minute documentary video dealing with the interference potential of Broadband Over Powerline technology in Australia.

The show is a virtual tour video of the Mt Nelson B-P-L trial area and contains a visual and audible representation of the interference potential of the B-P-L technology deployed in the area. It also contains commentary and background information on B-P-L technology . You can view it on-line at http://reast.asn.au/vk7bplwatch.php#bpltours (WIA News)

**

THE BPL WAR: RSGB OPPOSES BPL SCHEME

The Radio Society of Great Britain is supporting International Amateur Radio Union Region 1 efforts to stop proposals, whereby Broadband over Powerline systems could operate within the High Frequency broadcast bands. This, using a technique called dynamic notching. The RSGB support has been to echo IARU's detailed technical objections; the response can be seen

from the link on the RSGB web site - www,rsgb.org. (GB2RS)

RADIO RULES: THE FCC AND 6.25 kHz NARROWBAND TECHNOLOGY

The Federal Communications Commission has
declined to mandate when the Private Land Mobile
Service will be directed to adopt 6.25 kHz
narrowband spacing between systems, but says that
it will eventually happen. And this could be as
early as 2011 or 2013. And hams in need of more
repeater channels are likely watching to see how
it all pans out. Amateur radio Newsline's Bruce Tennant, K6PZW, has more:

--

If you own an Amateur repeater on any of the
bands between 2 meters and 70 centimeters, a
decision by the FCC to force users in the Private
Land Mobile Service to adop 6.25 KHz
inter-station spacing at some yet to be
determined day could eventually impact on ham
radio. This is because the operating standards
used in commercial service usually work
themselves down to ham radio operations over a period of time.

On March 22nd the FCC made public its Third
Report and Order dealing with a mandatory shift
to 6.25 KHz ultra-narreowband technology. The
release says that the agency for now does not
want to establish a specific fixed date for
private land mobile radio systems in the 150 to
174 MHz and 421 to 512 MHz bands to transition to
6.25 kHz. That said, the FCC also says that it
plans to have such a transition take place once
gear is available and certified for sale. And
for that reason, the FCC strongly urges land
mobile licensees to consider migrating directly
to 6.25 kHz rather than first adopting 12.5 kHz
spacing and later making the 6.25 kHz move.

But there are a few caveats. In its announcement, the FCC admitted that 6.25 kHz technology is not mature enough to warrant setting a specific migration schedule. Also, that there are no accepted industry standards for 6.25 kHz, and this could be a problem in regard to interoperability between various users.

But says the the FCC also says that it will expeditiously establish a schedule for transition to 6.25 kHz ultra-narrowband once the technology matures to the point that sufficient equipment is available for testing.

What does this mean to hams? While the FCC is not likely to tell radio amateurs that they have to adopt the same technology, it is all but inevitable that some hams will begin looking at 6.25 kHz for their own future repeater operations. This might be especially true in the crowded urban areas like the North-East and in California where waiting lines exist for new repeaters with some hams in that line for several years.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

6.25kHz narrowband will not be seen in the Private Land Mobile Radio for several years, but ham radio experimenters are likely to try it long before then. (Adapted from FCC news release)

**

RESCUE RADIO: CONECTICUT DISTRICT ADOPTS HAM RADIO EMCOMMS

A Connecticut township health district has adopted Amateur Radio as its second line for back-up emergency communications. The March 31st edition of the electronic newspaper Voices.com reports that the Naugatuck Valley Health District has completed the installation of the new ham radio base station, to assist in emergency communications.

The article notes that Al Raymond KB1HLK of Naugatuck and Charlie Betkoski, WB1CML, of Seymour, the NVHD helped to spearhead the successful installation of the station. The gear will used in the event that traditional means of communication, including landline telephone, cell or computer, have failed, or are being stretched thin and not functioning adequately.

Health District leaders say that the organization has been working very closely with its partners in the Connecticut Amateur Radio and Emergency Services to make sure that they have purchased equipment that will stand the test of time, and will be easy to operate for ham radio volunteers. A recent test of the system showed that it could communicate state wide.

The Naugatuck Valley Health District says that it is also close to enacting a memorandum of understanding with Connecticut ARES. One that will solidify the relationship that has been developing between it and the regions Amateur Radio operators over the past several years. (voices.com)

**

RESCUE RADIO: REPORT SAYS CELLPHONES SAFE IN HOSPITALS

A report released on March 9th has concluded that cellular telephone calls made on cell phones do not affect hospital medical devices. But the same researchers say that store anti-theft alarms might make implanted heart devices misbehave. Amateur Radio Newsline's Bill Pasternak, WA6ITF, reports:

--

According to March issue of Mayo Clinic Proceedings., tests at Rochester, Minnesota hospital showed normal use of cellular telephones caused no noticeable interference with patient care equipment. What came as a surprise was a finding that a portable CD player caused an abnormal electrocardiograph reading when a patient used it near one of the leads of the device.

Most hospitals forbid the use of cell phones. Dr. David Hayes and colleagues said their tests suggest the ban is unmerited.

The researchers tested cellular phones using two different technologies from different carriers, near 192 different medical devices. During 300 tests run over five months, they reported no trouble with the equipment.

But not all communications technology mixes with medical devices. Dr. J. Rod Gimbel of East Tennessee Heart Consultants and Dr. James Cox of the University of Tennessee Medical Center in Knoxville described two cases in which anti-theft devices apparently caused implanted heart devices to malfunction.

Dr. Gimbel says that one of the patients had a pacemaker and she collapsed after pausing in a store doorway. Another had an implantable cardiac defibrillator that shocked him after he stood near an anti-theft unit. Dr. Gimbel adds that simply moving a person with one of these implanted devices away from the anti-theft device may save their lives.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, at the studio in Los Angeles.

--

Regardless of what this report says, it is important to follow the rules that each individual hospital enforces and displays. And if the sign says to turn off your cellular telephone while on the premises, then its best that you do as asked. That goes for your H-T or any other two-way device as well. (Mayo Clinic Proceedings, Science On-Line)

**

ENFORCEMENT: SIGN YOUR LETTER AND STAY OFF THIS REPEATER

Turning to regulatory news, a New York, ham, previously told by the FCC to stay off of certain repeatesr, has had his written response returned to him by the FCC. This because he failed to sign it.

On February 20th, the FCC wrote to Bruce H. Williams, N2YIH, of Long Island City, ordering that he stay off three New York city area repeaters. This, after Williams allegedly ignored an edict from the systems trustee to not use the machines.

According to the FCC, Williams filed a written response on March 12th but did not sign it. That letter was returned to him on March 27th for his signature. At that time the FCC said that the repeaters he must avoid using are those operating under he call letters WA2ZLB. (FCC)

**

ENFORCEMENT: PLEASE QSY YOUR REPEATER

A ham in Puerto Rico who declined to change the operating frequency of his system has been advised to do so by the FCC.

In a letter to Oscar Resto, KP4RF, the FCC notes that he was requested by the Puerto Rico Virgin Islands Volunteer Frequency Coordinators group to move his repeater off of 145.450 MHz because it was mixing with another transmitter and

interfering with a repeater on 145.37 MHz. The
FCC notes that both repeaters involved are
coordinated and that such a move by Resto would
not only cure this problem but another interference problem as well.

The FCC letter notes that the coordination
council has found a new frequency pair for
Resto's system, and advises him that making the
move would be in the best interest of all
concerned. But the FCC also warned KP4RF that
failure to resolve the interference may subject
him to a loss of automatic remote control privileges for his machine. (FCC)

**

RADIO AT ALTITUDE: IN FLIGHT CELLPHONE BAN TO CONTINUE

Don't look for the FCC to change its rules that
currently forbid the use of cellular telephones
while flying. This after the agency acts on
Tuesday, April 3rd to continue its ban on the
in-flight use of these and other wireless devices.

Back on on Tuesday March 20th FCC Chair Kevin
Martin announced that the agency would likely
abandon a proposal that would have lifted the
prohibition. The decision came after the
wireless telecommunications industry indicated in
recent comments to the FCC that mobile phone
calls in planes at altitude would cause massive
interfere with their ground based
networks. While the range of a cellphone is only
a mile or so on the ground, that same unit at
35,000 feet could capture cellular telephone
receivers sites for several hundred miles in all
directions. That said the industry would bog
down a systems ability to handle other calls.

Two agencies claim regulatory jurisdiction over
the issue. The FCC is focused on whether
in-flight calling interferes with ground-based
networks, while the Federal Aviation
Administration considers in-flight safety issues..
(Published news reports)

HAM HOLIDAYS: INTERNATIONAL MARCONI DAY - APRIL 28

International Marconi Day will take place on
Saturday 28th April this year. Although the
event is not a contest, participants can qualify
for award certificates by contacting special
stations. These stations must operate on or close
to a site where Guglielmo Marconi carried out
experiments or where Marconi equipment was used
prior to his death in 1937. Further information
can be found at www.gb4imd.org.uk. (Varoious)

**

THE SOCIAL SCENE: QRP FOUR DAYS IN MAY EVENT

Low power operators are being invited to register
for the Four Days in May event. Its being held
on May 17th to 20th in Dayton, Ohio, alongside the 2007 Dayton Hamvention.

Organized by the QRP Amateur Radio Club
International, Four Days in May is the world's
premier QRP convention. This year there will
once again be the usual line-up of expert
speakers including Radio Communications Magaxine
columnist, the Rev. George Dobbs, G3RJV flying in
from the U-K. Other speakers include Lyle
Johnson, KK7P and Wes Hayward, W7ZOI. There will
also be various building and design competitions during the event.

The Four Days in May gala banquet and
prize-giving ceremony will be held on Saturday
evening, May 19th. Full details about the event
can be found on the web at www.qrparci.org/fdim. (Press release)

A WORD OF THANKS FROM THE SUPPORT FUND WITH ANDY JAREMA N6TCQ

Ladies and gentlemen, with more thanks to those
who contributed to the Newsline Support Fund.
Thjis time going back to May of 2006, here's
Amateur Radio Newsline's Support Fund Administrator Andy Jarema, N6TCQ.

--

In the month of May we heard from monthly
contributor Joseph Bartzi, Jr., KC8DKF of
Columbus, OH., The Peoria, IL Area ARC , monthly
contributor William Walters, WA2IBM, and Scott
Hensley of the Area Communications Team, both in
San Jose and the San Francisco ARC, in memory of member Jim, KK6SD

Via PayPal we heard from Robert Weissman , the
Sulpher Mountain Repeater Association of Santa Paula, CA,
N. Rubin of N3SGD Electronics and Gary Elmer,
representing the KG6DVO repeater of Huntingon Beach, CA.

Month in and month out Newsline gives you the
latest news of Amateur Radio- it doesn't come to
us- we have to go get it. With no advertising, we
depend on you- our loyal listeners. Our website-
arnewsline.org has all the info you need to
contribute, including a quick link to PayPal. Or
there's our address: Newsline Support Fund, PO
Box 660937, Arcadia, CA 91066. That address will
be repeated at the end of the newscast. Thanks for your help.
I'm Andy Jarema. N6TCQ. (Support Fund)

--

Thank you Andy.

HAM RADIO IN SPACE: OSCAR 11 AGAIN HEADED TO ECLIPSE

If you want to use the OSCAR 11 satellite, now is
the time to give uit a try. This is the last
operational period for the Amsat-OSCAR 11 ham
radio satellite before eclipses start on April 20th.

Currently, good, steady signals are being heard
from it on 145.826 MHz. If the satellite behaves
as it did last year, once the eclipses begin, it
is unlikely to be heard for any length of time,
during the eclipse period. These continue until August 23rd.

OSCAR 11 also known as UoSAT-OSCAR 11 or UoSAT-2
is one of those long surviving ham radio

birds. It was launched into orbit way back on
March 1, 1984 on a Thor Delta rocket from
Vandenberg Air Force Base in California. It was
the first ham satellite to carry a digital
store-and-forward communications payload. (AMSAT, G3CWV, ARNewsline(tm))

WORLDBEAT - CANADA: NEW CANADIAN SECTION MANAGERS

Radio amateurs of Canada has named Joan Bahnman,
VE5JML, as Saskatchewan Section Manager,
completing the term ending October 31, 2008.
Bahnman has been acting in the position after the
first call for nominations went unanswered by
Saskatchewan hams. In the recent second call she
ran unopposed, thus removing the need for a balloted election.

Meanwhile, Alberta Section Manager Tom Martens,
VE6TRM, was nominated and ran unopposed in that
Section, thereby also alleviating the need for a
balloted election. Tom begins another two-year term on July 1st. (RAC)

**

WORLDBEAT - UK: RSGB MAMES NEW RCVS NATIONAL COORDINATOR

The Radio Society of Great Britain has appointed
Dr Robin Bellerby, GM3ZYE, as its new Radio
communications Voluntary Services National
Coordinator. Dr. Bellerby who resides in the
city of Newton Stewart, has more than forty years
experience of RAYNET and radio services to the
local community behind him. His principal role
is that of the working interface between all
RAYNET groups and the RSGB and to work closely
with the "Network" on all emergency
communications matters. RAYNET is the UK
equivalent of RACES. Dr. Bellerby takes up his post immediately. (GB2RS)

**

WORLDBEAT - NEW ZEALAND: AN NZART CONVENTION DOWN-UNDER

Down-under, the New Zealand Amateur Radio
Transmitters 2007 Conference and Annual General
Meeting will be held June 1st to the 4th . The
venue is the Palmerston North Convention Centre
in the city of Palmerson. Among this years
highlights will be forums by Fred Johnson ZL2AMJ
showing an Introductory Demonstrations in Radio
Technology and local Government Liaison Officer
Mike Newman ZL1BNB on Antennas and the New

Zealand Resource Management Act. More
information is on-line at www.nzart.org.nz/nzart (NZART)

**

ON THE AIR: K5THD CELEBRATES WORLD HEALTH DAY APRIL 7

Special Event station K5THD will be focusing on
World Health Day while operating from the Tulsa
City-County Health Department. K5THD, which is
the . Tulsa Health Department Amateur Radio
Club, will take to the airwaves on Saturday,
April 7th from just after midnight to 23:59 UTC
to celebrate the 2007 outing of this annual
event. Operations will be on . 7.273, 14.273,
21.373 and 28.373 HHz. QSL to the Tulsa Health
Department Amateur Radio Club, 5051 S 129 E Ave, Tulsa, OK 74134.
PSK and SSTV on request. See www.tulsa-health.org/k5thd for more. KC5FM))

HAM RADIO AND SCOUTING: THE SCOUTING 100 AWARD

A new international Amateur Radio award has been
launched to mark the centenary of the scouting movement.

Called the Scouting 100 Radio Award it comes in
two forms. One is available only to ham radio
operators while the other to S-W-L's.

To attain this award, it is necessary to accrue
points by contacting or hearing scout or guide
stations during 2007. Contacts or reports with
individual scout or guide stations count for one
point. Special event scout stations are worth
two points. The World Jamboree, the Gilwell Park
station in the U-K and Brownsea Island stations count for five points each.

There are no restrictions on what bands and modes
are used. The award is also available for
Echolink and IRLP mode operators. More is
on-line at www.scouting100award.org. (RSGB)

**

DX

In DX word that an upcoming operation is in need
of a few more good operators. The R-S-G-B News
says that K-5-L-B-U, is organizing a DXpedition
to Botswana, which is scheduled to take place
between July 5th to the 21st. He already has four
operators so far, but would like to find at least
two more to join the team. If you are interested

in making the trip you can contact him at frosty1@pdq.net

And news that DL6UAA will be active as 3B8MM from
Mauritius starting on the 5th April and will be
there for a few weeks. He will operate mostly CW,
but will also give SSTV a try. QSL DL6UAA either direct or via the bureau.

Also, 3D2AG is active as FO5RK portable F-K from
Noumea, New Caledonia. He will be there to the
end of April operating mostly on 40 and 20 meter CW. QSL this one direct
only.

Lastly, listen out for a group of operators from
Antwerp, Belgium to be active as ON4OSA portable
P-A from Schouwen-Duiveland. This through the
14th of April. QSL this one as directed on the air.

(Various DX news sources)

**

THAT FINAL ITEMS: CALL IT DX DREAMS

And finally this week, the United States is not
the only place where hams have D-X wish
lists. Amateur Radio Newsline's Don Wilbanks is
here with the D-X desires of hams in one European
nation and of those down-under:

--

German radio amateurs are desperate to make
contact with Swain's Island while Australians and
New Zealanders are more keen on QSOing with an
operation from Yemen.. This, according to a pair
of new surveys that have recently been released.

The German DX Foundation has published the
results of a 2006 survey of that nations most
wanted DXCC entities. More than 83 percent of
respondents cited Swain's Island as their most
wanted. This was followed by Scarborough Reef,
Navassa Island, Bouvet Island and Lakshadweep Islands.

Meanwhile, a survey into Oceania's most wanted
list by ZL3AB, revealed that Australian and New
Zealand hams wanted most to make contact with
Yemen. Other locations high up the list for those
living down-under included Navassa, Pagalu I,
Scarborough Reef and Amsterdam and St Paul Island.

--

I guess no matter where in the world you are, you likely have a most wanted D-X list of your very own. (WIA News)

Is that because the radio lacks some sort of certification or are
you assuming that the original poster lacks a business band license?

Wouldn't the radio have to be type accepted (or whatever it's called) to be
used on the business band?

I don't know about US legal requirements (FCC..?) but here in the UK it's
a requirement that *ALL* radio transmitting equipment is type approved,
with the sole exception of that used by radio amateurs (and, I believe,
the military, but not sure on that one).

We are exempt because we have passed the necessary examinations to show we
have the technical knowledge to modify transmitting equipment without
causing interference to other users of the radio spectrum.

Radio transmitters used on business band must be FCC approved
("certificated") for that service. The ICOM in question is not.

The Phrase in question is "Type Accepted", and ALL Transmitters licensed
under Part 90, 80, 20, and a few others, MUST be Type Accepted by the
FCC, to be marketed, Imported, and sold, in the US. Any person may
modify any piece of equipment they choose, HOWEVER, said modification
MAY void the Type Acceptance for that piece of equipment, and therefor
make it a violation of the Licensing Conditions as specified on the
Station License granted by the FCC.

Ivor,

I only got my licence this Thursday (2E0WYM) so it won't have been
me :) I have not been on the air yet as I have been busy
constructing a fan dipole (40m - 10) which is for the loft as I
can't put up external aerials.

It was more an inconvenience really, the US tests were (and probably
still are) easier than the ones in Oz. I supposed I could have
travelled to the US under my Aussie passport and nobody would have
been the wiser, but it would have involved committing perjury about my
dual citizenship, something that would have been hard to sleep with.

The US rules are unbending, if you are a US citizen you must apply for
a US license even if you are only visiting for a fortnight. When I
stayed for a long period they even tried to nick my Aussie drivers
license when I applied for a US one///

Hey, Bruce, things have changed since the days when we looked for the
FCC Form 452-C on each transmitter (a tag stating the name of the
licensee and the call sign of the station that it was licensed under).
Quite a while back, the FCC changed the level for Land Mobile (and
other services') transmitters from "Type Acceptance" to
"Certification" meaning that the manufacturers need not send the test
data to the FCC and wait for the Type Acceptance to be issued but can
self-test and certify that it meets specs, with test data made
available if there is a question. This was because the industry
complained that it was taking too long to process Type Acceptance
applications, and the Commish' took the easy way out and changed the
level rather than to do what should have been done, namely hire more
examiners to make the process more timely.

Oh, the requirement for the 452-C is gone as well. More
"privatization"....

While the term may have been purged from the R&R, I have seen it in the current question pool for commercial licenses. Element 1 has a question (#12) that reads:

Q: "What is a requirement of all marine transmitting apparatus used aboard United States vessels?"

A: "Only equipment that has been type accepted by the FCC for Part 80 operations is authorized."

I'm looking for an audio DSP program that runs on a (fast) PC and provides some of the audio DSP features that something like the MFJ 784B provides.

One would take the audio output from a receiver and feed it in the "line in" port and get DSP'd and filtered audio output from the computer speakers.

Anything like that available?

Thanks, John.

I meant more in terms of programs that people here may have used and found to be of high quality.

But, I'll wade through some of those 1,690,000 (now 1,940,000) hits and see what I find.

587. Threaded Rod

Newsgroup: rec.radio.amateur.moderated
Date: 2007-04-09 13:58:13 UTC
From: KH6HZ <kh6hzA@Tarrl.net>
Message-ID: <oerSh.67000$s8.6767@newsfe21.lga>
Source record: 4892

I'm relocating my tower next month to my new home, and have to pour a new pier footing for the tower.

Does anyone have a good online source for threaded rod?

Specifically, I'm looking for 3 pieces of 1 inch threaded rod, roughly 3' in length.

Local supply sources don't stock anything that large, plus I would question the quality of the rod they sell in terms of the softness of the steel. I want to make sure I get the best quality I can buy up front.

588. Pointers to (or on) block downconverter construction?

Newsgroup: rec.radio.amateur.moderated
Date: 2007-04-09 14:26:11 UTC
From: Mike Andrews <mikea@mikea.ath.cx>
Message-ID: <evdhjs$ub7$1@puck.litech.org>
Source record: 4893

I've got, and love, an RFSpace Inc. SDR-IQ software-defined receiver. It covers 100 Hz to 30 MHz, and lets me eyeball any 190 KHz (or narrower) chunk all at once, which is rather particularly nice. I'd like to be able to use it on 30 to 60 MHz and higher, which means that I need a downconverter. It seems to me that a suitable downconverter would let me set a switch to choose which 30 MHz band got mixed down to the roughly 0-30 MHz baseband.

I'd like to have this work up through the 70 cm. ham band for sure, and as much higher as I can get. I know that construction techniques change as one gets above HF, and change _radically_ at UHF and above. How hard is this going to be, overall?

The general setup I envision is something rather like

LO
n*30MHz
(n to |
(n+1)) |
* 30 MHz 30 MHz wide V 0 to 30 MHz
input --> bandpass filter --> mixer --> output
to SDR-IQ

Some questions for the (perhaps not older: I'm 60) wiser heads with more design-and-construction experience: is this at all a reasonable thing to do? Does anyone have any ideas on suitable mixers? Am I looking at a disparate-enough set of frequency bands that I will wind up having to use multiple mixers, possibly one per 30 MHz band, or per octave? It is trivially obvious to me that I'll need different antennas.

Is it reasonable to look at using a comb generator which is driven by a 30 MHz reference, so that I just take the appropriate harmonic and amplify it to a power level that suits the mixer I have to use for that particular 30 MHz band? Would it be better, perhaps, to use DDS to generate the LO frequencies I want?

Type Acceptance is still required for Marine equipment, as is a
General Radiotelephone Operator License to repair and adjust same.

We were discussing Land Mobile equipment, where the level of equipment
certification was reduced from Type Accepted to Certificated several
years ago, as was deletion of the requirement for a commercial license
to repair or adjust same

Good to know. I've always respected their tools, starting from the
cartridge-driven bolt setters that I used 42 years ago when I put up
my antenna in 4X4-land. (Another story, that one....)

Offhand, NOT hard at all...with the aid of some MiniCircuits
components such as the mixer and perhaps an input low-pass
filters. The down-converter's LO is going to be the bear
if you want frequency accuracy.

>The general setup I envision is something rather like
>
> LO
> n*30MHz
>(n to |
>(n+1)) |
>* 30 MHz 30 MHz wide V 0 to 30 MHz
>input --> bandpass filter --> mixer --> output
> to SDR-IQ

That's the general block diagram of every down-converter. :-)
With perhaps the exception of the "30 MHz wide BPF." Nearly all
wideband spectrum analyzers use a lowpass filter there with the
LO riding ABOVE the input frequency; image will be on the "high
side" and that is blocked-out by the LPF.

>Some questions for the (perhaps not older: I'm 60) wiser heads with
>more design-and-construction experience: is this at all a reasonable
>thing to do?

Absoutely reasonable.

>Does anyone have any ideas on suitable mixers?

I would suggest going to www.minicircuits.com and seeing what they
have...a rather large selection. Those are ready-built in various
basings and all cover an octave or more in both input and LO ports.

MiniCircuits has some nice tutorials on various aspects of Mixers.
Price is reasonable for ready-built components.

>Am I
>looking at a disparate-enough set of frequency bands that I will wind
>up having to use multiple mixers, possibly one per 30 MHz band, or
>per octave?

I would say a single Mixer rated at LF to 1 GHz Input will do the
job. Passive (diode) Mixers are as broadband as their coupling
transformers and diodes allow, something now quite wide in frequency.

>It is trivially obvious to me that I'll need different
>antennas.

Not necessarily. A discone can do nearly a double decade in
frequency range but at a slight loss (1 db or so) less than a
dipole. For more gain and directionality, a log-periodic for
VHF-UHF can be used for an easy decade bandwidth.

>Is it reasonable to look at using a comb generator which is driven by
>a 30 MHz reference, so that I just take the appropriate harmonic and
>amplify it to a power level that suits the mixer I have to use for
>that particular 30 MHz band? Would it be better, perhaps, to use DDS
>to generate the LO frequencies I want?

I would suggest a form of PLL, similar to a TV set-top box converter
for down-converting old UHF channels to VHF. The LO needs to
increment
only in 30 (perhaps 15 for 'havsies') MHz increments. The direct LO
frequency sample can be fed to a prescaler whose output (at a lower
incremental frequency) can be applied to a digital counter whose
output
is phase-frequency compared to a stable reference frequency. The LO
output to the Mixer needs only to be above the minimum specified level
and below a maximum, also specified if a ready-built mixer is used.
At below-1-GHz frequencies you can get away with attenuating the LO
level with a carbon-comp T or H pad figured for the common 50 Ohm
system. MiniCircuits also has VCOs of many kinds in stock and most of
those cover a half to a full octave in electronic tuning range.

Layout of the UHF needs, realistically, only an approximation of the
PCB trace width for "50 Ohm lines" on whatever substrate is used.
For very short trace lengths the "mismatch" isn't noticeable and,
for under-1.2 GHz frequencies, I've used #20 AWG wire without
problem in performance! :-)

In thinking more about it, salvaging an old TV UHF channel converter
might be a better idea, modifying its output to go DC to 30 MHz
instead of stopping at Channel 2; a few for cable TV service go
lower in output frequencies for built-in cable service functions,
depends on the maker of the set-top and the cable service. All
of those seem to operate at 2 MHz increments but use "in-house"

PLL subassemblies, circuit diagrams printed on unobtainium. :-(

Prescalers - as stock items - are now scarce but exist mainly as "house number" special orders. A few dealers have them as old stock left-overs. Nearly all operate up to 900 MHz so their ability to prescale a UHF LO is no problem.

The SDR-IQ is a fairly precision instrument as a spectrum analyzer and it deserves to have a down-converter checked out with good test equipment. Any one of the (now ancient) HP-608 signal generator models can cover up to the 70cm band with known RF output levels. That's another thing to keep in mind.

I hope some of this long text is a help to you.

The FCC database derived numbers can be inconclusive, because the "new/
upgrade" numbers are masked by expirations, giving a "net" number.

Here are some interesting numbers compiled by NCVEC just from test/
upgrade-paper numbers are "bare" of the influence of expirations.

These numbers compare the period of Jan 1 to March 25 of this year
(2007) vs. last year (2006)

New Tech (2006) 4685 (2007) 6565 Change = +40%
New/Upgraded Generals (2006) 945 (2007) 7395 Change = +683%
New/Upgraded Extras (2006) 775 (2007) 1910 Change = +146%

Yet the net number is far more meaningful. It is what tells us if we have growth or not. Many (but not all) proponents said that this would bring growth and, at least so far, it has not. Admittedly the time frame is as yet too short. However, it's also too short to see if this change in new Technicians is sustained or is a momentary blip in the curve.

"Meaningful" is context dependent.

If the context is "compare the number of new/upgraded licenses by
class for the period January 1 through March 25, 2007 with the
corresponding period in 2006", then the "net" number is not meaningful
and would be misleading.

As I see it, the time frame is too short to draw any conclusions of
any sort. Imagine that we were discussing a change to the tax laws that
was intended to increase reinvestment. How many YEARS would you have to
wait before you could say that you had conclusive proof that the policy
had succeeded or failed?
I still believe that the vast majority of persons who have an
interest in electronics, computers, radio and related fields; the
demographic segment from which one would reasonably expect to attract
new hams, knows nothing whatever about any of this. While they probably
read technical publications of some sort, most of them probably read no
publications that are explicitly about amateur radio. I have seen
virtually nothing on this topic in any other media.

I don't believe that there is any significant percentage of the
general population of the USA who has never heard of ham radio.

I don't believe the "changes in requirements" were intended to grow
ham radio.

I don't even care if ham radio grows or doesn't grow. There are
millions of hams on planet Earth, more than enough to fill my logs on
any mode I choose through at least the next four sunspot cycles.

I believe that Hans' percentage numbers are indeed relevant.

In a dynamic area such as ARS license numbers, there is a need to look beyond raw numbers and to determine exactly why the numbers that you are comparing look as they do.

Looking at the numbers in one way, we may wonder at an apparent drop-off. A lot of technicians went way. We need to speculate on why. It would be a basic assumption that they decided that Ham radio was not for them.

Why? Some have speculated that the majority of that drop-off was a change in communication habits, ie. Hams who got their licenses for purposes of "calling home" to check in, or get a grocery list, or the like. Some call that flavor of Ham a "honeydo" Ham. These people are served by Cell phones now.

Others have speculated that the dropoff was due to poor treatment of new Hams.

I don't doubt that there may be examples of the second group, I would surmise that there could be a little bit of both reasons, but am inclined to think it might be a 90/10 in favor of the former.

I have personally seen a surge of new Hams in our area. We've been having a 2 percent growth in our area since *before* the testing change, and assuming that tonights testing is successful, 2 new generals and a Technician will be added to the ranks this evening. Those new guys don't know a thing about what the Honeydo hams were doing ten years ago, and

don't particularly care either. They have become interested in Ham radio, and we've encouraged them every step of the way. We've been selling the sizzle.

One minor disagreement with Hans, though. I don't care if we get some kind of huge growth, in fact, that would be lots of problems to deal with. We need a steady influx of new people to keep the hobby interesting, and to replace the fact that everyone is terminated to ground eventually. 1 percent growth would be desirable in that context, I think.

Well I certainly run into a lot of people who don't know about it. They ask
me what my antennas are for and I tell them ham radio. The next question
out of their mouths is "Ham radio, what's that?"

> I don't believe the "changes in requirements" were intended to grow

However, they need to be looked at in context. Just looking solely at the
new licenses and upgrades does not give a complete picture.

I would like to see it stay at about the same percentage of the general
population as it is now. As the population grows or shrinks, I would expect
our numbers to do the same. However, as you said, we do need the new

recruits as none of us are immortal.

In my experience, non-hams' knowledge of the
existence of amateur radio is all over the map, from
"never heard of it" to "what do you want to know?"

Most people may have heard of it, but that doesn't mean
they really understand it. For example, I have met people
who thought amateur radio disappeared years ago. Others
think that it requires an elaborate station and the knowledge
of an EE just to get started. Etc.

With significantly less than 1% of US residents holding
amateur radio licenses, it's not unreasonable that lots
of people today would not have heard of amateur radio.

> > I don't believe the "changes in requirements" were intended to grow

"Growth" has consistently been one of the main reasons
given for changing the license requirements, by those
who wanted them changed.

> > I don't even care if ham radio grows or doesn't grow. There are

That assumption is incomplete, however.

Some may have decided ham radio was not for them.
Others may have had to put aside ham radio for a time,
because of other responsibilities.

A considerable number may have either died or become
incapacitated enough that amateur radio is no longer an
option for them.
>

I know many hams who got licenses in the late 1970s, 1980s and 1990s
for just that reason. Some of them
became interested in other facets of amateur radio, some
did not. Some replaced amateur radio with a cell phone,
some did not.

I don't know if those who replaced amateur radio with a
cell phone make up a majority of those who left, or not.

But I do know this: We're not getting very many new
"honeydew" hams anymore. Not anywhere near what
we were getting before 1995 or so.

Exactly! But by the same token, to get those 3 hams, you probably had
to sell the sizzle to quite a large number of

people.

I think that if Amateur Radio is presented in a clear and positive
manner, the growth will take care of itself.

I believe that there is a significant difference between "never heard"
of ham radio versus just aren't aware of aspects of ham radio that may
be appealing to them personally. The latter is far more prevalent, and
worrisome, in my opinion. What is the lay perception of ham radio?
Probably the most positive is that of of hard-core techies with antennas
all over their houses and cars (as hard-core techies are the force
behind popular, sometimes useful, things like the space program,
cellular telephones, digital music, HDTV, the Internet, etc.). Being
admired as techie heroes doesn't necessarily mean that a lot of people
want to become such techie heroes themselves, however. The most
negative image would be that of reclusive individuals engaging in an
obscure, possibly obsolete, pastime with no apparent redeeming social
value beyond preserving history and reminiscing about the past.

Over the years, I have observed the following common reactions by the
lay public to ham radio publicity and recruitment:

- Oh, isn't that like CB?

- So, can I set up my own broadcast station and play whatever music I
want?

- My grandfather/uncle/father/brother/cousin was into that many years
ago, is it still around?

- I'm really not deeply technical, is that for me?

- I do consider myself a techie, but would ham radio give me any useful
training or experience beyond what I could already get from
traditional academic or vocational programs?

The editorials linked by Ed Mitchell, KF7VY, in his "last column" below
are at least 8 years old or more, but I think they are still relevant to

the current discussion (though there has been some regulatory relief since he wrote them, especially with regard to digital modes and spread-spectrum):

http://www.hamradio-online.com/1999/oct/lastcolumn.html

>I don't believe the "changes in requirements" were intended to grow
>ham radio.

That does seem to be the main strawman that's been built up by some (not all) who would fight for the status-quo to the bitter end, and appear to want to transfer the blame for lack of growth to others. Would a stagnant service that wasn't shrinking, but wasn't growing, be any better or worse than trying to appropriately embrace change?

>I don't even care if ham radio grows or doesn't grow. There are

>73, de Hans, K0HB

Let's hope those sunspot cycles are better than the last few. I can't recall any really good HF propagation since at least the late 1980's, and certainly nowhere near the all-time peak in recorded history that occurred in the 1950's (or so I'm told by my elders).

In general I agree with you Mike. I've had some trouble getting
to the website where Hans got his numbers; www.ncvec.org doesn't
have any page with that information.

Other than that, amateur radio licensee numbers MUST remain "up"
in order to indicate to the government there is a "presence" of
citizens in a sizeable number that deserves attention. There
are many different radio services regulated by the FCC and
amateur radio is a minority among those.

The "why" of license changes can be determined by different raw
database searching than what most "statistics" websites show.
The information exists as to changes in class. Obviously there
has been a large number of recent "upgrades" of Technician to
General. None of us can find any reasons for licensees letting
their licenses lapse, at least from the raw database.

The FCC database may be publicly-downloadable but it is LARGE
at, what, 80 to 90 Megabytes? One needs high-speed Internet
service for reasonable downloading. File size of the database

is not a problem in modern PCs, nor is it difficult to write a
specific sorting routine to extract various categories' data.
Many publicly-accessible websites already do some sorting.

> Why? Some have speculated that the majority of that drop-off was a

>purposes of "calling home" to check in, or get a grocery list, or the
>like. Some call that flavor of Ham a "honeydo" Ham. These people are
>served by Cell phones now.

Based on my experience in southern California, I took the
"honey-do" license reason as pure speculation on others' part.
What I have seen here in the last decade is: (1). A rapid
growth of cellular in its present compact HT form; (2). a
growth of "technician" type VHF and UHF activity which had
already begun well back before the year 2000 Restructuring.

Caveat: I live in a large urban population area, not unlike
the NYC-LI, Chicago, San Francisco ('Bay Area'), Seattle, etc.
areas. VHF-UHF at LOS paths works well in such areas. But,
there is another part of VHF-UHF radio activity that doesn't
quite have the parallel of HF DX hunting, in-person get-
togethers, spontaneous or planned.

The BBS or Bulletin Board System had a tremendous growth
from the early 1980s to the "ripening" of the Internet in
the later 1990s. Quite a number of those BBSs featured
in-person "gatherings" of a social nature where all could
get to know one another better, not through the scarcity of
few clues presented through a computer screen. That's not
unlike the VHF-UHF large urban amateur situation where the
participants can travel a short distance to some gathering.
There's not the "DX Isolation" of hundreds or thousands of
miles to another continent as is often the case on HF.

There's more activity of radio amateurs above 30 MHz than
what the "HF" amateurs think, especially in larger urban
areas. Those who operate above 30 MHz should never be
thought of or even considered as "second-class" amateurs
of the "shack on a belt" category.

> I have personally seen a surge of new Hams in our area. We've been

>selling the sizzle.

There's a problem with using anecdotal evidence: It is too
limited to apply to the national scene. Changes in licensing

patterns FOR the national area can only be derived from national licensing information. I can say my 91352 ZIP area has 78 hams with over 2/3 of those at Tech or Tech-Plus category but it means little for a national amateur radio condition. Yes, at my test session on 25 Feb 07 over half were there to get or to upgrade from Technician licenses. Doesn't mean much to looking at the overall national scene.

> One minor disagreement with Hans, though. I don't care if we get some

>I think.

The national population keeps on growing. Amateur radio licensee numbers have not over the last four years. To keep a "presence" of the hobby requires that licensee numbers at least keep pace with the population increases. The FCC is aware of numbers and serves the national interest, not just amateurs. The FCC must try to accomodate all the radio services as best it can. In general, I see them as doing that.

If the amateur radio licensee numbers are up or at least maintained,
there will be a MARKET of suppliers of amateur radio goods. That's important, not just for ready-made super-deluxe do-everything rigs but also for supplies, of components, of accessories. If the market sees a decline in percentage of the population, then some will drop out or the prices of goods will increase.

The amateur radio market has already dropped some. Advertising sales are down slightly. That was enough to force HR and 73 to quit their independent publications, for CQ to reduce its VHF specialty periodical. QST hangs in there on the basis of enormous support from the ARRL but it is folly to depend on it as the sole source of all US amateur radio information. Radio Shack is mainly a purveyor of consumer electronics goods. There are fewer and fewer "radio parts" stores across the country; most of the old "radio parts" aren't even made now, their makers into other, more profitable electronics goods areas. Without a "presence" in the marketplace, a decline in license numbers could continue a slow market drought.

BTW, as to Dee Flint's other comment in this thread, the "pros" in electronics HAVE been informed of the code test elimination since December, 2006. EDN and Electronic Design, both industry trades of wide distribution, and SPECTRUM, the membership magazine of the IEEE had news of that prior to 23 Feb 07. There were brief mentions of it in various Pentron industry trade news, even the occasional newspaper "filler" story around the country. It wasn't known just to already-licensed radio amateurs

but to a larger segment of the electronics-oriented public.

What percentage of the general populace read EDN, Electronic Design, and Spectrum? We can't rely on just one group of people (pros in electronics) to provide stability or even growth. Just because a person is an electronics pro doesn't necessarily mean that amateur radio will tickle their fancy.

What percentage of the newspapers carried those fillers? Not many. Of those, what percentage of people actually read the fillers tucked in here and there in the newspaper?

We need to get the word out among the general populace not just specialty groups.

Dee, N8UZE

I bumped into this post after a couple of hours on Skype with a ham buddy of mine in New Zealand. I was 5-9 for the whole QSO and I don't have an antenna.

Who do we call "potential recruits" under these conditions? What's the point, any more? (Please don't point me to that old BS about emergency comms. I went right through the eye of Hurricane Hugo in Charleston in 1989, talking on Cellular One's AMPS bagphone to worried friends in Ohio as I stood in the street, in the eye, looking up at the stars in a completely destroyed neighborhood.

The system is even better, now, unless, of course, the Illuminati use thermite to take out the building the cellular switch is located in like 9/11 in NYC.

Agreed. I'm glad someone got that into this conversation. That we
have these allocations at all is a minor miracle. Numerical preservation
is one of the ways that we will keep them, IMO.

>> Why? Some have speculated that the majority of that drop-off

Yes, most of the reasons given are spectulation, and when that
happens we tend to inject our own personal views into that speculation. I
don't really know the cause of the drop-off, am just making a (hopefully)
intelligent guess. 8^)

From th etimes that I was out there, that would be VHF nirvana,
tall mountains and fairly flat valleys. I suspect the canyons might be a

little challenging tho'. Back here in PA we have nice mountains, but so many foothills and corduroy valleys that make repeater work a little more challenging. But even that can be overcome with effort and fairly deep pockets. We have a very good local repeater system, with several polling stations on the local mountains that vote on which signal gets to the main repeater. A 300 mw HT cam be used over almost the entire county.

>
> There's more activity of radio amateurs above 30 MHz than

We're certainly busy on VHF here. State College is considered the "smallest metropolitan area in the country...8^)

> Those who operate above 30 MHz should never be
> thought of or even considered as "second-class" amateurs
> of the "shack on a belt" category.

Absolutely. I've often thought that there was a natural divide between HF and VHF+. Disregarding 6 meters, which is kind of a mishmash, it can almost be two different hobbies. I gravitate toward HF myself, but there is cool stuff happening at VHF and above. And so what if a Hams hobby is confined to "the repeater" anyhow?

Our situation is truly a "single data point". My thoughts on that are that we are working hard to prove that with an inclusive atmosphere (critical) and selling that sizzle, we seem to be making it work.

There are so many facets to Ham radio - Experimentation, Olde tyme radio, voice, digital, simple OOK Morse comms. Public service, contesting, DX'ing, homebrewing, SWD radio, Offroading comms, and on and

on. the ARS should almost be selling itself. And the serendipitious finds it's way into the picture too. I never would have thought that I would get into hollow state technology, as I am heavily into the latest technology too. Go figure!

My main point is that with good representatives, Ham radio shouldn't be a hard sell.

> but to a larger segment of the electronics-oriented public.

Knowledge that Ham radio "exists" is nice, I suppose. Even better would be that people understand that they might want to get involved.

Just one example might be APRS. Although I find it a little creepy, helicoptering parents might find it interesting to know where their offspring are. I'm pretty convinced that a PSK31 enabled 2 meter "texter" radio would be popular among high schoolers and even older hams. Something like that should have been available some years ago. You could even combine it all into one unit.

This isn't rocket science, just pipe dreaming something that might be an interesting element of the hobby. Who says that we all have to be doing the same thing?

Yes, pretty much! We also need to have our hobby in some position
to attract the general populous also. Some of the same type items that I
was writing about with Len.

I take my own situation as an example. I got into Ham radio as a
person who was interested in possible communications support and control
in matters relating to Amateur Astronomy. From there, it blossomed into
HF and to my surprise, some of the old (read hollow state) radios as well
as digital modes.

While we can say "You can communnicate with the world on HF, that
point might be lost on people who can pick up a cell phone and call most
anywhere in the world.

It might take a little while for the fact that we can do that
without any infrastructure to sink in. Once that happens, we got 'em hook
line and sinker.

The important thing is that we have to find something relevant to
the newbie to start with.

This rings true for me, Paul.

I've been trying to talk my XYL into getting a license for a bit
now. Unfortunately she is convinced that my approach to the hobby is de
rigeur. She sees my pile of test equipment in the garage, and all the
homebrewing that I do, and has assumed that that is how Hams have to be.
I'm still working on convincing her that you don't have to be an ubergeek
to be a Ham.

It sure would be nice to have someone to talk to in the shack while
I'm in the backyard or on the roof tuning the antennas.... 8^)

If I want to talk to a buddy in New Zealand, I'll pick up the telephone. That does, indeed, provide me with pleasure and the satisfaction of talking with a buddy in New Zealand. If I want to enjoy a different kind of satisfaction, I'll walk into my ham shack and crank up the rig. There, I might also experience the satisfaction of chewing the rag with a buddy, or I might call CQ just to see who responds, or I might see if I can snag that rare DX station, or check into a traffic net, or help with the local Skywarn operations, or perform any number of other tasks. From those I receive satisfaction.

You're right about the fact that if you view ham radio as the ability to have a spoken conversation with another individual, there are better ways to do that. Frankly, that's not the specific aspect of ham radio that interests me; there's not even a microphone hooked up to my HF rig.

Another example: If I want to travel from Chicago to Kenosha, I'll jump in my car or perhaps take the train. If I want the *trip* to be the point, perhaps I'll use a motorboat. If I want to have a different kind of experience and hone a skill that not everyone has, I'll join some friends and race sailboats to Kenosha, enjoying the mental challenge of figuring out what is the best course, rigging, and strategy based on current wind and weather conditions. The fact that the most efficient method of travelling from Chicago to Kenosha is not by sailboat does not diminish the fun of sailing as a hobby.

> The system is even better, now, unless, of course, the Illuminati use
> thermite to take out the building the cellular switch is located in like
> 9/11 in NYC.

You are correct that communications infrastructure grows better and more resilient as more and more money is poured into it. You are wrong that it always survives a disaster.

I'm thrilled that you were able to wander through a hurricane chatting on your cellphone. I can counter that story with the opposite one from Katrina, where communications infrastructure disappeared from large areas for long time periods. I can also tell you that FEMA, the Red Cross, and other organizations are spending large sums of money to prepare mobile equipment to move into place to take care of those interruptions that you don't acknowledge. Ham radio does still have a place in those sorts of events, even if it's not the same role that it might have had a decade ago.

But that's not really the point. The point is that ham radio is a multi-faceted hobby, with many different interest groups. That doesn't mean that it's for everyone, but there's a lot more than chatting with a buddy or supporting emergency communications.

I suspect that is the majority opinion among the lay public.
It's hard to explain the difference between a CB operator
and an amateur radio operator using a modified CB rig
on 10m with two inches chopped off the CB antenna. :-)

Respectfully, your perspective on Amateur Radio is a bit narrow. It
isn't just about talking with other people. If all a person wanted to do
was talk, they are much better off picking up the phone. And they were
much better off a long time and on many other comm modes before Skype
came around.

> I went right through the eye of Hurricane Hugo in
> Charleston in 1989, talking on Cellular One's AMPS bagphone to worried

1 data point. We had a snowstorm that took down most of the power
lines in our area a few years back. Everyone tried to call their worried
friends and took the cellular network down almost immediately. If cell
phones were reliable, they wouldn't spend all that money on emergency
comm systems.
If they stay up, that is great. Use 'em if you got 'em. (however
even if there is power, during emergencies they tend to get overloaded)

The worldwide membership of the IEEE exceeds the number of licensed
active US radio amateurs. The electronics industry employs
millions in the USA alone. It is BIG.

>Just because a person is an
>electronics pro doesn't necessarily mean that amateur radio will tickle
>their fancy.

That's true and observable in any corporate electronics engineering
environment. But, don't forget that the majority of those IN the
electronics engineering part of the industry got INTO it for the
fascination of the technology. It doesn't take a great deal of
persuasion to get them interested in the hobby aspects of radio
beyond scanners, beyond SWL, beyond WiFi, beyond WLANs. Indeed,
some of them get into robotics, a fun hobby for many...or they get
into audio. My MD General Practitioner is fascinated by speakers
and various ways to couple them for the highest-fi of sound, but
not INTO circuitry itself...despite being able to USE a number
of very high-tech electronic devices in his medical practice.

Those in wholesale and retail merchandising of electronics pay
attention to many phases of the electronics market, trying to
anticipate demand. They will also delete items that do not sell
well or where the local interest groups are too small for them
to make a profit in their business. My wife and I were out today
looking for a particular item of consumer electronics. One place,
a relatively new Best Buy store (built four years ago), was huge.
A mile and a half away is a Fry's Electronics, even bigger. In
observing the entire electronics retail industry for the last half
century, I've never seen any amateur radio outlet that approaches
their size.

>What percentage of the newspapers carried those fillers? Not many.

Perhaps. I can only state that the Los Angeles TIMES has a
circulation of 1.4 million each day. Since more than one
person will read one issue, the number of readers here may
exceed 3 million.

>Of
>those, what percentage of people actually read the fillers tucked in here
>and there in the newspaper?

I have no idea, not being in the journalism field. You might
try asking your own newspaper about that.

>We need to get the word out among the general populace not just specialty
>groups.

I will suggest you observe the Public Relations techniques of
the entertainment industry. They manage to get enormous PR
about entertainers, TV series, motion pictures, etc. Or any
advertising agency willing to talk about it (not that easy).
They KNOW about such things.

The first thing amateur radio MUST do is to LOSE the old, trite
cliche's of a half century ago used to "promote" amateur radio.
Almost all of that just doesn't work in this first decade of the
new millennium. We have one in three Americans with a cell phone.
CB users outnumber licensed radio amateurs by anywhere from 4:1
to 7:1, certainly so and larger on the nation's highways. We
get worldwide video feed from anywhere on the globe for TV news,
the only thing stopping some on late-breaking news is the crowding
of communications satellite transponders. We all were able to see
"videophone" pictures from inside Iraq during the first Gulf War
(a decade and a half ago). We can have VoIP anywhere that the
Internet is, which is sizeable on every continent. We have
wireless auto "keyless entry" locks by the millions in use every
day. We have Wireless LANs available in homes, not just
businesses. We have wireless door bells and the cell phone
"Bluetooth" short-range couplers to a teeny cell phone typified
by the strange growth some ardent users have in one ear. :-)

The general public - to me - doesn't seem to know exactly what
"shortwave" is, even less informed on what "HF" is. They know
about CB because such has been featured as an integral part of
one popular TV series ("Dukes of Hazard"), used in several major
motion pictures ("Convoy" and "Smokey and the Bandit" among the
bigger grossers). The best that can be said for showing amateur
radio is the film "Frequency," a fantasy tale of some kind of
time travel. Note, "Contact" starring Jodie Foster, was much
more science-fiction about first meeting with aliens even
though it had brief showing of amateur radio as part of the
story.

The general public can recognize cell site antennas and towers, can understand that police and fire and other public safety agencies USE radio as part of their work. They KNOW they can choose a satellite relay service for their home TV instead of going to cable; the little dishes are unmistakable. They just don't have an appreciation for a "QRP ham rig that can talk anywhere in the world," especially when that ham rig requires just the right kind of ionospheric conditions to be able to do that. In general, the public seems unaware of shortwave broadcasts since they have plenty of standard AM and FM broadcasting available in every US urban center.

The general public is much more aware of the skylines of many urban neighborhoods interrupted by towers with beam antennas, ungainly wire antennas strung as best a residence plot allows. In general they think them ugly and unsuitable for a residential neighborhood. In general they aren't going to be sold on some tall tale of "those are 'necessary' for homeland defense!" Besides the occasional RFI problem, the general public has a negative opinion of amateur radio in their neighborhood...it is their HOME territory, not a radio center.

Trying to talk up amateur radio to the general public requires being AWARE of what the general public knows, NOT what amateurs or membership organizations want. It isn't publicity to promote ham radio to the general public if all that is done is amateurs high-fiving one another on a "job well done." It isn't "well done" to the public if they reamin insular. Despite being an ARRL member, I cannot (in truth) say that the ARRL has gotten out to the public. If anything, NASA has done that much more on requesting astronauts to get Technician class licenses to talk to various public school groups from space. That's a NASA PR ploy to keep the public aware of NASA activities... and future NASA budgeting to keep the space biz going.

Walter Cronkhite as a narrator of an amateur radio video about amateur radio is fine. But, it can't just be shown to amateur radio clubs. It has to get OUT to the public. At least sell the idea of showing the video as a public service, something the stations are required to do. So what if the showing is in the wee small hours of the morning? SOME showing is better than NONE.

Yes, and proper politicking, too. Example: The model radio-
control channels on 72, 74 MHz. Model hobby organizations and
the model hobby industry fought for that and got them. No way
that model airplanes, boats, cars are "advancing the state of
the art" of vehicles nor is it even a scientific activity. It
is FUN to do. The Academy of Model Aeronautics in Ohio has
a quarter million members and that is only part of total
involved in model hobbies. It CAN be done without all the
high-sounding rhetoric. It is a PEOPLE-involved activity and
the numbers do make a difference.

I don't know when you were in southern California area, but the
Condor Net began about 1977...back before microprocessors were
available to the hobbyist. On the "220" band, it uses subaudible
signalling to access any repeater path from just north of the Bay

Area (San Francisco) down south to L.A. and San Diego, over to
Arizona and one link to Nevada. All privately funded, all public
access, over 600 miles of all types of terrain, flat to mountains.

There's an unfortunate stereotypical attitude, enforced by
years of publicity since before WW2 that ONLY HF is
"important" since that is where DX happens. HF is easier
to work with than VHF because "lumped" constants are used
to make identification and understanding easier. By the
UHF region it begins to be "distributed" constants, much
harder for the average ham to understand. But, VHF and
above can do some tricks that are physically impossible
for the average ham home owner...even if "DX" is a rarity.

>Our situation is truly a "single data point". My thoughts on that are
>that we are working hard to prove that with an inclusive atmosphere

Whatever works on the local scenes is good. If it works, it works.

> My main point is that with good representatives, Ham radio
>shouldn't be a hard sell.

That is the HARD part! The OLD paradigms, the phrases, the
"new" phrases such as "vital to homeland defense" just don't
work with the general public. It hasn't worked enough so far.

As I remarked to Dee, NASA is doing more for ham radio PR than
the ARRL. Those astronauts who got Tech licenses didn't do so
"for the good of amateur radio." They got them because it was
a job requirement. NASA is doing its own PR since it is
publicly funded through the taxpayer.

> Knowledge that Ham radio "exists" is nice, I suppose. Even better
>would be that people understand that they might want to get involved.

Selling "sizzle" is a first step. Adding the "bacon" aroma
helps a lot. But the sizzle and aroma can NOT remain locked
inside ham club houses. That is NOT proper PR, despite it
making hams in those club houses feeling all good and
emotional.

> This isn't rocket science, just pipe dreaming something that might
>be an interesting element of the hobby. Who says that we all have to be
>doing the same thing?

Ahem...several of the more vocal are dead set on continuing
all the old paradigms, confident that such is the "best" way.
It isn't. The number of NEW licensees arriving on the ham
scene is NOT keeping up with those expirations. It's been in
the statistics for at least three years now and is NOT just a
minor blip in the numbers.

Yup, NASA has gotten a lot more mileage out of the project than the ARS
has.

Another suggestion. most Cable systems have public service channels.
Amateur radio advocates should be able to tap into that.

There is one caveat, and I go into this with a bit of sensitivity here.
In my non-Ham life, I often put together productions that serve as
advertisements. The old adage of putting your best foot forward is
mandatory if you are going to get a message across. We often do not do that.

You don't need - or even want - the smartest Ham on the block. What you
need is an adept communicator. This erudite communicator needs to be
"prettied up" for the prospective audience. Wearing a "Hooters" T-shirt
ain't gonna cut it. I would probably wear a suit and tie (note not a
white shirt and skinny black tie). Maybe lose the jacket after a few
minutes. In similar form, we're trying to attract teenagers, we probably
don't want a kid with a tattoo on his forehead and a safety pin in his lip.

Why don't we want that local uberHam? In many (most?) cases they are
not very good communicators.(note the difference between communicating

and communicator) They are too close to the subject. If we're trying to demonstrate HF comms for the unfamiliar, they don't need a lecture on the third intercept point of whatever transceiver. Sometimes they want to show how smart they are more than try to attract people.. Wanna scare a prospective Ham away? Make them feel like they can do anything if they aren't an engineer.

Focus the message, use a good communicator, and look approachable.

Amateur Radio Newsline Report 1548 - April 13, 2007

Amateur Radio Newsline report number 1548 with a
release date of Friday, April 13th, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T. A space adventurer is
on the air from the International Space Station
and we have the audio. Also, President Bush
honors a California ham for his volunteerism and
the FCC issues a possible record fine is issued
for selling illegal C-B gear. Find out the
details on Amateur Radio Newsline report number 1548 coming your way right now.

HAM RADIO IN SPACE: SPACE TOURIST ON THE AIR

It cost him an estimated 20 million dollars to
get there, but Space tourist Charles Simonyi,
KE7KDP, is on the air from the International
Space Station Amateur Radio Newsline producer
Bill Pasternak, WA6ITF, is in our Los Angeles
newsroom with the audio of some of his first contacts:

--

Simonyi: "November Alpha One Sierra Sierra. CQ, CQ, CQ."

--

As we go to air space tourist Charles Simonyi,
KE7KDP, has only been on the International Space
Station for a few days. No matter because he
seems to have really taken to the idea of talking
to people back on mother Earth using Amateur
Radio and does it like a pro. Take a listen:

--

Simonyi: "Kilo Echo 7 please repeater your
callsign Kilo Echo 7 Mike Henry George this is
Charles. I hear you loud and clear. And a big
73 for you. Thanks for the contact. QRZ.

The Whiskey 6 stand-by. Whiskey 6 Mike Echo
Uniform, my name is Charles and I hear you loud and clear. 73 to you. "

--

One of the first stations contacted by KE7KDP was
Scott Avery, WA6LIE, in Salinas, California.
Avery had his recorder running as KE7KDP sent a
message of thank you to the ham community which
worked with him to get him licensed in time for the flight:

--

Simonyi: "Well I just want to congratulate the
(ham radio) community for the great job that they
are doing in performing their charter. As we
learned about it (in training) and to thank
everybody who helped me to get into the community
and helping me along. It is not easy for me and
I do the best that I can. So, thanks a lot guys,
and I hope I can talk to as many people as possible. Over."

--

We also got the chance to ask Avery what it was
like to talk to Charles Simonyi and relay his message to the ham radio world:

--

Avery: "Being one of the first to talk to
Charles on the International Space Station was
definitely an honor and a surprise. I feel very
lucky to have had this opportunity and I hope
that others enjoy their contacts as much as I
did. Its pretty awesome and a once in a lifetime experience."

--

After they chatted for about a minute, KE7KDP
said 73 to Avery and went on to work station
after station, almost as if he was on a
DX-pedition. In some ways he was and Avery kept
tape rolling until the I-S-S faded from view:

--

Audio of KE7KDP making rapid-fire contacts. Hear
it in the MP3 version of this newscast downloadable from www.arnewsline.org

--

KE7KDP has since gone on to make numerous of
random QSO's using the call sign NA1SS. Most U-S
hams report that they heard him on 145.8 MHz and
made contact by calling him split frequency on
the 144.490 I-S-S uplink channel. The

frequencies used in other parts of the world
vary. Most of the information you need and a
blog by those who have made contact with Simonyi
can be found on-line at www.issfanclub.com

Charles Simonyi will be on board the I-S-S until
April 20th. That's when he returns to Earth with
Expedition 14 crew members of Michael
Lopez-Alegria, KE5GTK, and Mikhail Tyurin, RZ3FT,
both of whom who have been in space since last
September. So until then, keep an ear open for
Charles Simonyi, KE7KDP, operating mainly as NA1SS from space.

For the Amateur Radio Newsline, I'm Bill
Pasternak, WA6ITF. I'm at the studio in Los Angeles.

Jim
--

You can follow KE7KDP's space and ham radio
adventure on-line at
www.charlesinspace.com (ARNewsline with audio supplied by WA6LIE)

NAMES IN THE NEWS: PRESIDENT'S VOLUNTEER SERVICE
AWARD PRESENTED TO VICTORVILLE CA HAM

President Bush has recognized a Victorville,
California ham with a volunteer award. Randy
Hatfield, AG6RH, has been presented the
President's Volunteer Service Award in
recognition of his helping 350 others obtain
their amateur radio licenses. Amateur Radio
Newsline's Jeff Reinhardt, AA6JR, has more:

--

The award presentation to Randy Hatfield, AG6RH
by President Bush took place on Wednesday, April
4th. This, during a stopover of Air Force One at
the Southern California Logistics Airport.

According to a White House press release, in
addition to his work in training new radio
amateurs, Hatfield was also honored for more than
500 hours he has volunteered to the city of
Victorville's Emergency Communications Service.

Randy Hatfield is with the City of Victorville
Community Emergency Response Team and the local
Emergency Communication Service. He began
volunteering with the Victorville team about 18

months. His group trains volunteers in basic
response skills such as fire safety, light search
and rescue, disaster preparedness and emergency communications.

In accepting the award Hatfield noted that he
became involved in Amateur Radio and the
Community Emergency Response Team because he
knows the day will come where volunteers will be
needed to support the infrastructure of every
city that might be affected. AG6RH says -- and
we quote: "If you don't have communications, you can't recover."

For the Amateur Radio Newsline, I'm Jeff Reinhardt, AA6JR.

--

Hatfield was nominated for the award by his
co-workers. Since March 2002, President Bush has
met with almost 600 individuals around the
country to present similar accolades. (CGC, San Bernardino News, others)

**

RESCUE RADIO: HT SAVES PAIR STRANDED ON N.M. MOUNTAIN

An interesting story with a ham radio twist out
of New Mexico. That's where two men from the
Gulf Coast found themselves stuck overnight on
March 15th in the mountains just East of Albuquerque.

According to news reports, 19 year old Nathan
Gerber and his companion Hunter Welch, 21 of
Corpus Christi, Texas were visiting the
area, The two were attempting to descend from
Sandia Crest but found themselves stuck on a
sheer rock face, unable to proceed down and
confronted with loose rock that stopped them from
retracing their steps back up.

The two were not properly dressed for the
overnight temperatures that occur at 10,000-plus
feet in mid March. The only thing that they had
going for them was a two-way radio. And
according to the news report it was that radio that likely saved their life.

It seems a local radio amateur heard their pleas
for assistance. He in turn alerted the state
police which dispatched a rescue crew.

The two men were plucked from the mountain face
at about 4 a.m. on the 16th . Officials say they
were exhausted but otherwise okay.

No information was provided in the K-Oh-B news
story as to who the ham was that picked up the
rescue call was or what type of radio Gerber and
Welch were carrying. Neither of their name
appear in the FCC database as being licensed
radio amateurs. (KOB TV News, others)

**

RADIO LAW: HFA FILES PETITION FOR RECONSIDERATION ON ANTENNA RIGHTS

A small group of antenna rights activists has
petitioned the FCC to reconsider the agency's
denial of their request to override deed
restrictions that preclude Amateur Radio antennas.

Hams for Action filed its initial request back on
July 31st of 2006. In it, the group urged the
FCC to establish reasonable regulation of outdoor
ham antennas by Homeowners' Associations and
other private land use regulators. This, in
place of the total antenna bans which currently
prevail in many neighborhoods across the United States.

Currently the FCC has PRB-1 which precludes
states, cities and other local governments from
banning ham radio antenna installations. It has
no such rule governing land use agreements which
the agency considers to be a private matter between buyers and sellers.

The Hams for Action request was turned down by
the FCC this past February 28th. The group has
now filed its Petition For Reconsideration which
is in effect, an appeal for the 5 FCC
Commissioners to review and reverse the decision of the Commission's staff.

More is on-line at the Hams for Action
website. Its in cyberspace at www.hamsforaction.net (Press release)

ENFORCEMENT: OHIO FIRM FINED $150,000 FOR
ALLEGEDLY MARKETING ILLEGAL 11 METER GRER

Possibly one of the largest fines ever for
selling non certified C-B sets under the guise of
it being ham radio gear has been issued to Ramko
Distributors Inc. of Toledo, Ohio. It's a
massive $150,000 Notice of Apparent Liability for
alleged marketing of 17 models of non-certified
radio transceivers that the FCC say are all
capable of easily being converted to the 11 meter
band. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details

--

Back on November 26, 2001, the FCC Enforcement
Bureau's Dallas, Texas Field Office issued a
Citation to Ramko Distributors for allegedly
marketing 41 models of non-certified "10-meter"
CB radio transceivers. The Dallas Office noted
that the Commission had evaluated devices similar
to those in the past and had concluded that the
devices marketed by Ramko were not only Amateur
Radio transceiver but could easily be altered for
use as C-B devices. The Dallas Office further
noted that the Commission has concluded that such
devices fall within the definition of a C-B
transmitter and therefore cannot legally be
imported or marketed in the United States.

The Citation warned Ramko of the possible
consequences of continued marketing of these
devices in violation of the rules, including
monetary forfeitures and criminal sanctions.

On November 30, 2001, Ramko submitted a follow-up
letter to the Citation. The company not only
disputed all of the legal and factual
contentions in the document. It also demanded
that the FCC withdraw the citation within 30 days.

The FCC did not withdraw. In fact it did a
number of follow-ups. By letter dated January
28, 2002, the Dallas Office again explained that
the subject devices were CB transmitters and
warned Ramko to stop marketing the equipment
immediately. But in its response Ramko again
disputed the Citation's conclusions and again
asked the Dallas Office to withdraw the
Citation. In April 2002, Ramko filed a third
letter which asserted that in the absence of a
response to its February letter, it assumed that
the Dallas Office agreed with its position and would withdraw the Citation.

Surprise. Not only did the FCC not withdraw the
citation, it continued to let the matter hang

fire until July 2005 when it acquired a Ramko flyer which advertised substantially the same equipment that was the subject of the 2001 Citation. Because it appeared to the FCC that Ramko may have continued to market CB transmitting devices as Amateur Radio equipment after receiving the 2001 Citation, on April 17, 2006, the Division issued a First Letter of Inquiry to Ramko concerning these units.

On May 22, 2006, Ramko filed a late response to the Letter of Inquiry. In it, Ramko stated that it neither manufactured nor imported the subject devices. But it also failed to provide responses to questions concerning the length of time it marketed each device, the total number of units sold, and the identity of its retailers and distributors.

Instead, the company argued that it only has a two-year document retention policy and that most documents dated before 2004 have probably already been destroyed. Also, that it was unable to conduct a computerized search for the number of units sold before April 1, 2006, when new computer software was installed and that matching customers to products before then would be limited to the existing paper invoices. It also claimed that it is unable match customers with products under the current computer system. Ramko did concede that it sent out catalogs or price lists which were "substantially similar" to the contents of its web page. Further, Ramko admitted that none of the subject devices received Commission authorization prior to marketing.

On July 20, 2006, the Division issued a Second Letter of Inquiry to Ramko. It once again requested that Ramko provide information concerning certain devices that it was marketing as amateur radio equipment. In view of Ramko's statement that it had a two-year document retention policy, the Division directed Ramko to provide the requested information for the most recent two-year period.

On August 23, 2006, Ramko filed a response. In its response, Ramko provided data on the total number of units sold for certain of the subject devices for the five-month period from April 1, 2006, to August 17, 2006. In answer to a question as to whether the subject devices were capable of operating, or of being modified to

operate, on any frequencies beyond the Amateur Radio Service, Ramko stated that "every Amateur radio is capable of being modified to work out of band." Ramko also said that information on how to modify almost every brand of Amateur radio to work out of band is freely available on the Internet."

Subsequently, in September 2006, the FCC observed that Ramko was still advertising several models of 10-meter radios in a flyer on its website. Of these 17 models, 16 models were specifically identified by the FCC in the 2001 Citation as devices that could easily be altered for use as CB devices and therefore could not be lawfully marketed in the United States.

And says the FCC, under Section 503(b)(1)(B) of the Communications Act, any person who is determined by the Commission to have willfully or repeatedly failed to comply with any provision of the Communications Act or any rule, regulation, or order issued by the FCC shall be liable to the United States for a forfeiture penalty. In this case the FCC has set the amount of Ramko's fine at $150,000.

In simpler terms, this is one of the biggest fines ever issued for what amounts to selling illegal C-B radios under the guise of it being ham radio gear. It also may be a sign of things to come to others who sell the same type of easy to convert to 11 meter pseudo ham radio gear.

For the amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

In case you are wondering, the radio gear in question carry brand names like Conex, Magnum, General models Jackson and Lee and Galaxy. Ramko was given the usual amount of time to pay the fine or to file an appeal. (FCC)

**

ENFORCEMENT: UNLICENSED BROADCASTER ORDERED TO PAY $10000

Another unlicensed broadcaster has been dinged for $10,000 by the FCC. This time the recipient of the order to pay is Junior Lahens Charles of Tampa, Florida.

The FCC says that Charles failed to respond to a Notice of Monetary Forfeiture issued to him on February 2nd for operation of an unlicensed radio transmitter. As a result of his ignoring the FCC and based on the information the FCC has before

it, the agency has ordered Charles to pay the
full within 30 days of the orders April 2nd release. (FCC)

**

ENFORCEMENT: FCC ACCEPTS HAM LICENSE TICKET FOR CANCELLATION

The FCC has accepted for cancellation the
Technician ticket of a licensee. One who has
been the target of inquiries and warnings from
the Commission's Enforcement Bureau dating back
to 2005. Amateur Radio Newsline's Paul Vinoski,
KR8ZZY, has the rest of the story:

--

The ARRL Letter says that the FCC's Special
Counsel Riley Hollingsworth wrote Brandon Duke,
KC0UWS, on March 6th. This, to confirm receipt
of Duke's Amateur Radio license for cancellation.

Past FCC communications to Duke have cited
information before the commission as well as
Duke's own admission to indicate he had been
operating on 10 and 20 meter frequencies not
available to him as a Technician class
licensee. Also in the past Hollingsworth had
taken Duke to task for allegedly ignoring
requests to stop using certain repeaters in his area.

Back in 2006, an apologetic Duke had pledged in a
letter to Hollingsworth to change his on-the-air
behavior, noting that he'd destroyed an audio CD
containing apparently objectionable material he'd
been accused of airing. He also said he'd
refrain from jamming, interfering and even using any repeaters.

In January of this year Hollingswotrth sent Duke
a "last warning." It was mailed to Duke at a
Colorado address, but came back as undeliverable.
At the time of the license cancellation letter
Duke had a Minnesota address on file with the FCC

For the amateur Radio Newsline, I'm Paul Vinoski, KR8ZZY

--

Duke applied for W0BMD last fall. In his letter,
Hollingswoth noted that his office had forwarded
Duke's license to the Wireless Telecommunications
Bureau for cancellation and for dismissal of his
application for a vanity call sign. (ARRL, FCC)

THE BPL FIGHT: VK HAMS RELEASE SECOND BPL INTERFERENCE VIDEO

Hams down-under have released a second BPL video
on DVD and streaming. One that depicts the
interference potential of Broadband Over Powerline Internet access.

The show is a 4 minute virtual tour of the North
Hobart B-P-L trial area. This is an installation
that has been the scene of complaints back to
telecommunications regulator ACMA. The video
contains commentary about the trial, technology,
issues and background information on BPL. The
interference that can be seen on the S-Meter and
heard in the soundtrack remains for most of the video at S9 and above.

This video is similar to the Mt. Nelson tour but
has one disturbing difference. Its on-line at
http://reast.asn.au/vk7bplwatch.php#bpltours (WIA)

**

RADIO RECOGNITION: HAM RADIO WEEK DECLARED IN CONNECTCUT

And Connecticut Governor Jodi Rell has declared
June 17th to the 23rd as Amateur Radio Week in
that state. In the proclamation Governor Rell
noted that the state recognizes and appreciates
the diligence of radio amateurs who serve in
SKYWARN as weather spotters and the efforts of
the many radio amateurs who volunteer their time
in crisis situations. The governor also made
note that Connecticut is the home of the American
Radio Relay League which represents the interests
of radio amateurs and also acts to interest young
people in the sciences by performing as an educational gateway. (ARRL)

**

NAMES IN THE NEWS: MENDELSOHN TO SPEAK AT QCWA BANQUET

Former ARRL 1st Vice President Steve Mendelsohn,
W2ML, has been tapped as this years speaker at
the Quarter Century Wireless Association's
Hamvention Banquet. Mendelsohn, who is with the
ABC Television Network will talk about the 2003
Superbowl's High Definition TV coverage and the
technology that went into making it happen.

The QCWA Hamvention Banquet will be held at
Alex's Continental Restaurant in the Dayton
suburb of Miamisburg Ohio on Friday, May 18th at
7:30 PM. Advanced reservation required. Send
request to Jerry Ragland, WA8BOB, 409 Park Av. Franklin Ohio, 45005. (QCWA)

**

BREAK 2

This is ham radio news for today's radio amateur. From the Auckland New Zealand and United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RADIO BUSINESS: TTI, INC. AND MOUSER ELECTRONICS BOUGHT BY BERKSHIRE HATHAWAY

One of the worlds richest men now owns a company that services the needs of hams who still like to homebrew their own gear. This with word that the Berkshire Hathaway Company headed up by billionaire Warren Buffett has acquired T-T-I Incorporated and its new affiliate Mouser Electronics.

As most listeners are aware, Mouser Electronics, is a component distributor which advertises in most ham radio magazines and is noted as a parts source in most electronic construction articles. The company ships globally to over 280,000 customers in 170 countries from its 432,000 square foot state-of-the art facility in Mansfield, Texas.

Its new parent company, Berkshire Hathaway is located in Omaha, Nebraska. Its core business is insurance, including property and casualty insurance, reinsurance and specialty nonstandard insurance. According to Wikipedia dot com, Berkshire Hathaway averaged a phenomenal 25%+ annual return to its shareholders for the last 25 years while employing large amounts of capital and minimal debt.

Both TTI and Mouser's management will remain in place. This ownership change should be invisible to customers and suppliers.

For more information about Mouser Electronics, please visit www.mouser.com. (VHF Reflector and other published reports)

**

EMERGING TECHNOLOGY: ZERO DAY ATTACK ON W.Va. TV STATION

A vulnerability in Microsoft Windows operating system apparently allowed a computer virus to penetrate the computer systems at WSAZ television in Charleston, West Virginia, almost taking the stations news off the air.

It was discovered early Saturday, March
31st just before the 6 a.m. newscast was to go
on the air . Information technology personnel at
WSAZ believe it was a "zero day attack" that
affected some of the station's critical systems
including those dealing with the station's
graphics, closed captioning, and many other
applications that help bring a newscast to air.

The vulnerability was announced on Wednesday,
March 28. According to Microsoft, a "hole" in
certain versions of Microsoft Windows could allow
an attacker to remotely run programs on some
computers if the user accesses certain websites that contain malicious code.

A Zero-day attack is described as a targeted time
threat that exposes computer application
vulnerabilities. Zero-day attacks are considered
extremely dangerous because they take advantage
of computer security holes for which no solution is currently available.

At airtime, Microsoft has not released a patch to
fix this latest vulnerability found in its Windows software. (Science On-Line)

**

WORLDBEAT - CUBA: CONGRESS TO SCRUTINIZE RADIO MARTI

In news from around the world, the Miami Herald
reports that a congressional committee now led by
Representative William Delahunt of Massachusetts
plans oversight hearings into Radio and TV
Mart&#65533;. This, amid allegations of mismanagement of taxpayer money.

The Oversight and Investigations Subcommittee of
the House International Relations Committee will
hold the hearings according to the news
account. Radio and Television Marti are United
States propaganda stations that beam news and
other information to communist dominated Cuba. (Published reports)

**

WORLDBEAT - ISRAEL: GLOBAL QSL UNVEILED
A pair of Israeli hams have teamed up to create
what they call a unique approach to Q-S-L'ing
with real cards over the Internet. Called Global
QSL, it was developed by Azar Hami, 4X6MI and
Paul Gross to permit hams with web access a way
to design and send out QSL's to other hams and SWL's.
It works like this. First you register with
Global QSL. That costs you nothing. Then you
download their graphic editing tool to design
their own QSL cards and upload their finished work to Global QSL's server.

Once the QSL design is in place, users can then
upload the QSO information using either the
standard ADIF format found in most electronic log
programs or, by manually uploading the QSO
information. QSL cards are then printed sorted
and forwarded to the respective QSL bureaus around the world.
More information on Global QSL, how it works and
the cost of printing and mail-out is on-line at www.qlobalqsl.com (Global QSL)
**
DX

In D-X, word that DL6UAA, will be active as 3B8MM
from Mauritius for the next few weeks. He will
operate mostly CW, but will also give SSTV a
try. More information including how to QSL is
on-line at www.dl6uaa.de/indexa.html

And DL9MWG will be active from Malta as
9H3RT. This, from April 18th through May
11th. Activity will be on HF, mainly CW. QSL
this one as directed on the air.

Lastly, PA5CW will be active portable YB9 from
Bali from April 25th to the 10th May. QSL direct via his callbook address.

(Various DX sources)

**

THAT FINAL ITEM: WOK TV

And finally this week, another of those stories
where necessity is the mother of invention. This
one happened down-under in Australia where a new
T-V station wanted to get on the air but did bot
have the cash on hand for a studio to transmitter
link antenna. So instead an engineer turned to a
Chinese cooking utensil for a solution. WIA News
Anchor Graham Kemp, VK4BB, has the rest of the recipe:

--

Ken Jones asked himself "Why pay $20,000 for a
commercial link to run your television station
when a $10 kitchen wok from the Warehouse is just as effective?"

This is exactly how North Otago's newest
television station "45 South"is transmitting its
signal from its studio to the top of Cape Wanbrow, in a bid to keep costs down.

45 South volunteer Ken Jones designed the wok
transmitter in his spare time last year. Along
with friend Murray Bobbette they worked out
mathematical equations to prove the curved metal

face of a wok would have the same effect as a small satellite dish.

"We have spent a lot of time getting it right --
the first time we installed one we had it up a
pole with the handle still on the end of the wok," he said.

"$20,000 for a commercial link was just money we
didn't have, so we bought several woks from The
Warehouse instead which was convenient and cheap."

--

And this story makes us wonder if the station
might decide to hold a celebration cook out using
the rest of the unused woks. We hope they invite us if they do. (WIA News)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the
CGC Communicator, CQ Magazine, the FCC, the Ohio
Penn DX Bulletin, Radio Netherlands, Rain, the
RSGB, the Southgate News and Australia's W-I-A
News, that's all from the Amateur Radio
Newsline&#65533;. Our e-mail address is
newsline@arnewsline.org. More information is
available at Amateur Radio Newsline's&#65533; only
official website located at
www.arnewsline.org. You can also write to us or
support us at Amateur Radio Newsline&#65533;, P.O. Box
660937, Arcadia, California 91066.

Two reminders before we go. First about our
on-line poll regarding your position on the
concept of Regulation by Bandwidth. To take
part, take your web browser
to www.arnewsline.org. Scroll down and watch for
the word "Polls" on the left hand side of the
page. Then click on the box that is closest to
your view. As soon as you cast your vote you will see the current results.

Also, the nominating season for this years
Amateur Radio Newsline Young Ham of the Year
Award is now open. Any radio amateur age 18 or
younger residing in all 50 United States, plus
Puerto Rico and all 13 Canadian Provinces can
qualify. Full details and nominating forms are
on our special website at www,yhoty.org. Also
see the Vertex-Standard sponsored ad on page 8
of the March issue of QST Magazine.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I m Jim Meachen, ZL2BHF reporting from Auckland, New Zealand, saying 73 and we thank you for listening. Amateur Radio Newsline is Copyright 2007. All rights reserved.

626. Broadband fixed gain amp

Newsgroup: rec.radio.amateur.moderated
Date: 2007-04-13 15:47:55 UTC
From: churd@slowfly.com
Message-ID: <1176478895.818021.150110@q75g2000hsh.googlegroups.com>

In a old Radio Amatuer's Handbook there was a circuit of a single transistor using a ferrite core transformer to get a broadband fixed gain of 6db or so for an antenna line amp. I've lost the Handbook. Can anyone find it or equivalent and send the info?

Thanks Mr C

1 GB2RS NEWS Sunday 15 April

The news headlines *

Train the Trainers in the East Midlands * Guidance issued for CW on 5MHz * Maritime officers honoured

The RSGB's Train the Trainers scheme continues to help tutors enhance the standard of their Foundation, Intermediate and Advanced licence courses. Alan Betts, G0HIQ and Brian Reay, G8OSN will be presenting the course, which is free of charge to Instructors. The all day event takes place on Saturday 2 June from 10am at Finningley ARS, located at Sandtoft, near Doncaster. For more information contact RSGB Region 13 Manager Jim Stevenson, G0EJQ, by email to g0ejq@rsgb.org.uk or Region 4 Manager Geoff Dalby, G7GJU, by email to g7gju@rsgb.org.uk. Demand is expected to be high, so it is important to register as soon as possible.

A question has arisen with respect to CW on the 5MHz channels and it has been suggested by the 5MHz Working Group that the edges of Channel FC could be used. The Group suggests that 5.289 or 5.291MHz are used, as CW transmissions on these frequencies should not affect the beacon monitoring and they would be easily monitored by any casual listeners in SSB mode. On either of these frequencies the transmissions would be 500Hz from the FC channel-edge. CW should not go closer to 5.290MHz, as this could upset the beacon monitoring.

The important role played by merchant marine radio officers will be commemorated by a special radio event in April this year. During Radio Maritime Communication Day, merchant navy radio officers will be active on the HF bands between 1200UTC on 14 April and 1200UTC on 15 April. Awards and certificates will be available to amateur who make contact with the merchant navy stations. You can find out more on the web at www.radiomaritimeday.org.

Silcoates School in Wakefield, in association with the RSGB, will host a seminar on amateur radio direction finding on 21 April. The aim of the event is to raise the profile of amateur radio direction finding in the north of England. The seminar will be lead by Bob Titterington, G3ORY, and a team from the RSGB ARDF committee. Amateur radio direction finding is a sport where the object is to seek out up to five hidden transmitters, orienteering style.

Nigel Wears, M0NJW, who set up the amateur radio club at Silcoates school, said: "ARDF activity has really taken off in Europe, and here

is a good chance for people in the north to learn from the best. The day will include class based sessions and videos, as well as a couple of taster sessions in the school grounds. There will also be an opportunity to purchase DF equipment."

The seminar is free but it is vital that people pre-book as there are only a limited number of places available. Application forms are available by emailing nigel@m0njw.co.uk. The organisers suggest that no more than three delegates should come from any one club, in the hope that the information given at the seminar can filter to as many people as possible.

2 International Marconi Day will take place on Saturday 28 April this year. Although the event is not a contest, participants can qualify for award certificates by contacting special stations. These stations must operate on or close to a site where Guglielmo Marconi carried out experiments or where Marconi equipment was used prior to his death in 1937. If you would like to operate one of these special award stations, it is essential that you register the station by emailing webmaster@gb4imd.org.uk prior to the event with full details of the station. Further information can be found on the web at www.gb4imd.org.uk.

The seventh International Museums Weekend special event will take place on 16 and 17 June 2007. Radio amateurs are encouraged to participate in this event by setting up stations in their local museums. Harry, M1BYT, who is organising the event, asks that all those intending to join in should please register their museum via the International Museums Weekend website. He also requests that they send their details to him by e-mail to harry.m1byt@tiscali.co.uk.

The International Amateur Radio Union has announced that the third Global Amateur Radio Emergency Communications Conference - or GAREC, as it is more commonly called - will take place on 16 and 17 August 2007 at the Huntsville Hamfest in the US. This will be the first time that the event has been held in the US.

Now the rallies and events for the coming week.

On Sunday 15 April the West London Radio & Electronics Show takes place at Kempton Park racecourse, Sunbury-on-Thames from 10.00. Apart from the usual trade stands, special interest groups, lectures and so forth, the rally will be hosting the new RSGB Top Ham quiz competition. More details on the web at www.radiofairs.co.uk.

On Sunday 15 April the Yeovil QRP Convention takes place at Digby Hall, Hound Street, Sherborne, Dorset. Details from George Davis on 01935 425669 or on the web at www.yeovil-arc.com. On Sunday 22 April the Lough Erne Amateur Radio Show takes place from 12.00 at the Share Centre, Lisnaskea. Details from Alan, GI6PYP, on 0286 635 1108. On Sunday 22 April the Nantwich Bunker Trust surplus sale of military and commercial radio equipment takes place from 10am at The Secret Nuclear

Bunker, French Lane, Nantwich, Cheshire. Details are on the web at www.hackgreen.co.uk. On Sunday 22 April the Andover Radio Amateur Club Spring Boot Sale takes place from 10am at Wildhern Village Hall. Details from Brian, G0KIC, on 01264 357628. More details of these and future events can be found on pages 96 and 97 of the April edition of RadCom. Now for news of special events.

The Scarborough Special Events Group will kick off their 2007 season of special events stations with GB2EXP over the weekend of 28-29 April.

Special event station ON50EU is active until 31 December to celebrate the 50th anniversary of the Treaty of Rome.

3 Look for special event station OX60AD to be on air throughout April to commemorate the 60th anniversary of the US Air Force and the 56th anniversary of the Defence Treaty between the US and Denmark for the Protection of Greenland. Activity will be on 40, 20, 17, 15 and 10m using CW, SSB and RTTY.

The Flight Refuelling ARS is operating special event station GB2FRA from 7 April to 4 May to commemorate its 25th anniversary. Activity will be on HF, VHF and UHF using CW, SSB and FM.

Special event station OX60AD (OX Sixty AD) will be active on 1-30 April to celebrate the 60th anniversary of the US Air Force base at Thule. Expect activity on 6, 10, 15, 17, 20, 40 and 80m using CW, SSB and digital modes.

Special station EV5IPY is on the air to celebrate the participation of Belarus in the 4th International Polar Year. Operations are conducted under the aegis of the newly born Department of Polar Researches at the Belorussian Geographic Society.

Special callsign, HF40PAZ, will be aired until 30 April and again on 1-30 September, to celebrate the 40th anniversary of club station SP6PAZ.

Special event station GB75PW will be active from various sites and locations until 31 December to mark the anniversary of Practical Wireless magazine.

Francois, F8DVD, has been issued the special callsign TM4IPY to celebrate the beginning of the 4th International Polar Year, and will be active between 1 and 14 April. Activity will be on all bands, SSB and CW. A special QSL card will be available. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

DL9MWG will be active from Malta as 9H3RT from 18 April to 11 May. Activity will be on HF, mainly CW.

PA5CW, will be active portable YB9 from Bali from 25 April to 10 May.

Mart, DL6UAA, will be active as 3B8MM from Mauritius starting on 5 April for a few weeks. He will operate mostly CW, but will also give

SSTV a try.

Bernard, DL2GAC, expects to be active from the Solomon Islands until 25 April.

Tony, 3D2AG, is active mostly on 40 and 20m CW as FK/FO5RK from Noumea, New Caledonia until the end of April.

Kang, DS4DRE, is currently active as DS4DRE/4 from Hong Island until 30 June. Activity will be on 80-10m, CW and SSB Now the contest news.

The RSGB 80m Club Championship data section takes place between 2000-2130UTC on 19 April on the 3.5MHz band. The exchange takes the form of RST and serial number.

Look out for the EU Sprint Contest between 1600 and 1959UTC on 21 April on the 3.5 to 14MHz bands, SSB mode only. The exchange comprises both callsigns, serial number and name.

4 RSGB 1.3 and 2.3GHz Activity takes place on all modes between 1900-22130UTC on 17 April. The exchange is made up of RST, serial number and locator.

The RSGB 1st 50MHz Contest is on the air between 0900-1200UTC on 22 April on all modes. RST, serial number, locator and postcode make up the exchange.

You can find out more about contesting, including a calendar of events and rules, on the HF Contest Committee and VHF Contest Committee websites. Links to these can be found on the RSGB website. Suitable freeware logging programs for RSGB HF and VHF contests are available from a variety of sources - see the links section of the contest committee website. Now the solar factual data for 2 to 8 April, compiled by Neil Clarke, G0CAS.

Two small sunspot groups disappeared on the 3rd. The solar disc then remained spotless for the remainder of the period. Solar activity was very low with no solar flares taking place at all. Solar flux levels were static everyday at 71 units. The 90 day solar flux average on the 8th was 76 units, that's one unit down on last week. X-ray flux levels remained well below the minimum A1 level throughout. Geomagnetic activity started at `active' levels with an Ap index of 24 units on the 2nd. This was the due to a coronal hole. The geomagnetic field then became quiet for the remainder of the period. However, late on the 8th the arrival of yet another coronal hole disturbance took place. The Ap index on the 7th and the 8th was only 3 units. The average was Ap 8 units. The ACE spacecraft saw solar wind speeds decline from 670 kilometres per second on the 2nd to 290 by the 7th. With the arrival of the coronal hole disturbance speeds then increased to 400 kilometres per second late on the 8th. Particle densities were low throughout except for an increase to 48 particles per cubic centimetre during the evening of the 8th. Bz varied between minus 2 and plus 2 nanoTeslas on the quiet days and between minus 5 and plus 13 nanoTeslas late on the

8th.

HF propagation improved by midweek, with all continents workable on 14MHz. The higher bands showed signs of life and there were even some brief afternoon openings to Africa on 28MHz. There were scattered reports of VHF aurora on the 2nd but, as is so often the case, they were confined to high latitudes.

And now the solar forecast. This week seems set to continue with solar activity at very low levels. The solar disc could be spotless on some days. How long will this present minimum phase last? Who knows, but when it does come to an end it will be rather sudden with only a few days notice at best. Solar flux levels are expected to be around the 70 mark for most of the week. For the first half of the week geomagnetic activity is expected to be quiet, however, from around Thursday activity should increase due to a recurring coronal hole. MUFs during daylight hours at equal latitudes should be around 18MHz for the south and 15MHz for the north. The darkness hour lows are expected to be about 9MHz. Paths this week to Australia should have a maximum usable frequency with a 50 per cent success rate of about 19MHz. The optimum working frequency with a 90 per cent success rate will be around 15MHz. The best time to try this path will be between 0900 and 1300 hours UTC.

And that's all from the GB2RS propagation team.

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Wednesday 18 April Chesham and District Amateur Radio Society is having a talk by Jeremy, G3XZG on 'my amateur radio station'. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 18 April Dover Radio Club is having its AGM. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 18 April Fareham and District Amateur Radio Club is having a talk on DFing by Graham, G0UUS and Steve, G7HEP. Contact Jim, M1JJN for more information.

On Wednesday 18 April Norfolk Amateur Radio Club is having its AGM. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 18 April Worthing and District Amateur Radio Club is having a talk on flat panel loudspeakers. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 19 April Chelmsford Amateur Radio Society is running an Intermediate Licence training course from 7pm at Danbury Village Hall. Contact Clive, G1EUC, on 01245 224 577, or on the web at www.g0mwt.org.uk/training. Contact Martyn, G1EFL, on 01245 469 008.

On Thursday 19 April Cray Valley Radio Society is having its AGM. Contact Bob, BRS32525, on 020 8265 7735 after 8pm.

On Thursday 19 April Horndean and District Amateur Radio Club is having a skittles evening at Wickham. Contact Stuart, G0FYX, on 023 9247 2846, or on the web at www.hdarc.co.uk.

On Thursday 19 April Shefford and District Amateur Radio Society is having its spring junk sale. Contact David, G8UOD, on 01234 742 757.

On Thursday 19 April Sutton and Cheam Radio Society is having a talk on the work of the RSGB EMC Committee by Colin Richards, G3YCR. Contact John, G0BWV, on 020 8644 9945, or by email to info@scrs.org.uk.

On Friday 20 April Mid-Sussex Amateur Radio Society is having a radio night and table top sale. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 20 April Radio Amateur Old Timers' Association is having a Get-Together in London Colney from 11am to 4pm. Details from Mavis, G0XBY or Adrian, M0ABY on 01582 833451.

On Friday 20 April Torbay Amateur Radio Society is having an operating night. Contact Dave, G6FSP, by email to g6fsp@tars.org.uk.

6 On Friday 20 April Wey Valley Amateur Radio Group is having a review of GB95MGY activities. Details on the web at www.weyvalleyarg.org.uk.

On Saturday 21 April Chelmsford Amateur Radio Society is attending Sandford Mill Open Day. Contact Martyn, G1EFL, on 01245 469 008.

On Saturday 21 April Dorking and District Radio Society is having its 60th Anniversary Reunion. Contact Mr Blanchard, G3JKV, or look on the web at www.ddrs.org.uk.

On Sunday 22 April Basingstoke Amateur Radio Club is having a foxhunt to find Alan, G8FMH. Contact Frank, M0AEU, by email to barc@2lo.info.

On Sunday 22 April Radio Society of Harrow is having an operating day for GB2DHH at the DeHavilland Heritage Museum, London Colney from10am - 2.30pm.

NEWS FOR THE SOUTH-WEST

On Wednesday 18 April Exmouth Amateur Radio Club is looking at its capacitance and inductance meter project. Contact g0uil@eclipse.co.uk.

On Wednesday 18 April South Bristol Amateur Radio Club is having a horticultural evening with Mrs Susan Grace. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 18 April Taunton and District Amateur Radio Club is watching a Dxpedition video. Contact William, G3WNI, on 01823 666 234, or by email to g3wni@btinternet.com.

On Wednesday 18 April Thornbury and South Gloucestershire Amateur Radio Club is having a video night. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Thursday 19 April Swindon and District Amateur Radio Club is having a talk on club projects from the past by Deryck, G3YKC. Contact Mike, M5CBS, on 01793 826 465.

On Thursday 19 April Yeovil Amateur Radio Club is having its AGM. Contact Derek, 01935 414 452, or by email to m0wob@tiscali.co.uk.

On Friday 20 April Bournemouth Radio Society is having an illustrated talk on 'a vertical aerial for the 17 metre band by David Wright, G4BKE. Contact John, G0HAT, on 07719 700 771.

On Saturday 21 April Flight Refuelling Amateur Radio Society is running its Foundation training course. Contact Chuck on 01202 881421 for more information.

NEWS FOR THE MIDLANDS

On Wednesday 18 April Hinckley Amateur Radio and Electronics Society is having an open evening. Contact Sam, M1FJB, on 01158 718 449.

On Wednesday 18 April Telford and District Amateur Radio Society is discussing operating abroad. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Thursday 19 April Salop Amateur Radio Society is having its first fox hunt. Contact Glenda, G1YJB, on 01939 235 412.

7 On Friday 20 April Coventry Amateur Radio Society is running a 2m direction finding event from 8.00, starting at St Bartholomew's church hall, Brinklow Road, Coventry. Contact John, G8SEQ, on 02476 273 190, or by email to johng8seq@ntlworld.com.

On Friday 20 April Hucknall Rolls-Royce Amateur Radio Club I having a talk by Jeff Lashley on amateur radio astronomy. Contact Carl, M0XBE, on 07979 092 447, or on the web at www.hrrarc.com.

On Friday 20 April Melton Mowbray Amateur Radio Society is having an emergency planning meeting with Melton Borough Council. Contact Phil, G4LWB, on phil@croxtonkerr.fsnet.co.uk.

On Sunday 22 April Worcester Radio Amateurs Association is having a talk on portable operation and kite aerials. Request details by email to info@wraa.co.uk.

NEWS FOR THE NORTH OF ENGLAND

On Wednesday 18 April Great Lumley Amateur Radio and Electronics Society is having a talk by David Barclay on leaky feeders. Contact Nancy, on 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Wednesday 18 April Mid-Cheshire Amateur Radio Society is preparing the equipment and club stand for Radio Active. Contact Richard, G0JIT, by email to rsa@zetnet.co.uk.

On Wednesday 18 April Wirral and District Amateur Radio Club is meeting at The Ring O'Bells, West Kirby. Contact Tom, G4BKF, on 07050 291 850.

On Friday 20 April South Manchester Radio and Computer Club is having a talk on Heathrow's Terminal 5 construction. Contact Ron, on 0161 969 3999.

On Friday 20 April Tynemouth Radio Club is preparing for International Marconi Day. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

On Saturday 21 April Silcoates School Amateur Radio Club is running its Direction Finding Seminar. Contact Nigel, M0NJW, by email to nigel@m0njw.co.uk.

On Sunday 22 April Great Lumley Amateur Radio and Electronics Society is running its Foundation course. Contact Nancy on 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

NEWS FOR SCOTLAND

On Wednesday 18 April Paisley (YMCA) Amateur Radio Club is having part 3 of its home brew QRP transmitter project. Contact Jim, GM3UWX.

On Thursday 19 April Aberdeen Amateur Radio Society is having a construction and on the air evening. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

On Saturday 21 April Cockenzie and Port Seton Amateur Radio Club is having a 10 pin bowling night from 8pm at Megabowl, Kinnaird Park. Contact Bob, GM4UYZ, on 01875 811 723.

On Sunday 22 April Central Scotland FM Group is having its AGM in Bathgate Guide Hall, Mid Street, Bathgate, West Lothian. Details on the web at www.csfmg.com.

8 NEWS FOR WALES On Friday 20 April Blackwood and District Amateur Radio Society is having a talk on Marconi and early radio by Glyn, GW0ANA. Contact Robert, MW0CVT.

NEWS FOR NORTHERN IRELAND

No news items have been received for Northern Ireland this week. And that's the end of this week's GB2RS news broadcast,

prepared by the Radio Society of Great Britain.

==>WORLD AMATEUR RADIO DAY 2007 SPOTLIGHTS YOUTH

Wednesday, April 18, is a special day for radio amateurs around the
globe.
That's when the International Amateur Radio Union (IARU)
<http://www.iaru.org> and its member societies representing more than
150
countries around the world celebrate World Amateur Radio Day 2007,
commemorating the founding of the IARU 82 years ago. The theme for this
year's celebration is "Amateur Radio: Allowing youth to connect the
world."
```

Despite the Internet and cellular telephones, Amateur Radio continues to attract people worldwide by providing free international communication and friendship. Because it does not rely on, nor need, established telecommunication infrastructure, Amateur Radio can reach every corner of the world -- and even into space!

The Amateur Radio on the International Space Station (ARISS) <http://www.rac.ca/ariss> program offers an opportunity for students to experience the excitement of Amateur Radio by allowing them to converse with ISS crew members about their scientific research, the space station, the human spaceflight program and everyday life in space -- a unique educational experience. With the help of Amateur Radio clubs and individual operators, orbiting astronauts and cosmonauts speak with young people around the world via ham radio, showing schools, teachers, students, parents and communities how Amateur Radio energizes youngsters about science, technology, and learning.

IARU member societies, Amateur Radio satellite organizations and a sizeable contingent of Amateur Radio operators -- including those from clubs at Johnson Space Center, Goddard Space Flight Center and Marshall Space Flight Center -- work behind the scenes to make these educational experiences possible.

Youth programs also are available through Scouting, as many thousands of Scouts in the US and elsewhere get together over the airwaves each year during the third weekend of October for Jamboree On The Air (JOTA) <http://www.arrl.org/FandES/ead/jota.html>. Participating Boy and Girl Scouts and Guides from all over the world speak to each other via Amateur Radio, offering these young people the exciting opportunity to make friends, exchange experiences and share ideas with their peers in other countries, sometimes without leaving home.

Since 1958 when the first JOTA took place, millions of Scouts have met each other through this event. Many JOTA contacts foster pen-pal relationships and links between Scout troops that last for years. Numerous scouts and leaders hold Amateur Radio licenses, while others participate in JOTA at stations provided by local Amateur Radio clubs and individual radio amateurs.

Young radio amateurs also form organizations of their own. One example is
the World Wide Young Contesters (WWYC) <http://www.wwyc.net/>, made up of
radio amateurs under age 30 who enjoy participating in international
contests. Several members of the club qualified to compete in the World
Radiosport Team Championship last July in Brazil.

While radio amateurs have been in the news repeatedly for providing
communication during disasters and emergencies, the lion's share of their
activities remains the excitement and joy of contacting distant and remote
areas of the world, learning directly about each others' regions and lives
and trying different ways to contact other hams in far-flung places. In
addition, some leading engineers and technologists have cited lessons
learned through their practical, hands-on experiences as Amateur Radio
operators for inspiring their career paths.

MK QTC, the Polish Radio Amateurs' Journal, sponsors the international World
Amateur Radio Day Award with the support of PZK, the Polish Amateur Radio
Union -- that country's IARU member society. Radio amateurs qualify for this
award by making at least 10 QSOs on HF or 5 QSOs on VHF between 0000 and
2400 UTC on April 18.

Send a log extract, including a list of QSOs, to The Radio Amateurs' Journal
MK QTC, Suchacz-Zamek - Wielmozy 5b, 82-340 Tolkmicko, POLAND, by June 30.
Include $5 (US) or 5 Euros. Shortwave listeners may obtain this full-color
award by submitting the same numbers of reports.

Since 1925, the IARU has been instrumental in coordinating and representing
Amateur Radio activities around the world. Learn more by visiting the IARU
Web site <http://www.iaru.org>. -- The IARU E-Letter

==>CIVILIAN SPACE TRAVELER ALREADY MAKING HAM RADIO CONTACTS FROM SPACE

After less than a day in space, civilian space traveler Charles Simonyi,
KE7KDP/HA5SIK, was already making contacts with the earthbound ham radio
community from NA1SS. The billionaire software pioneer and aviator arrived
April 10 at the International Space Station with the Expedition 15 crew of
Russian cosmonauts Fyodor Yurchikhin, RN3FI, and Dr Oleg Kotov. The trio
launched two days earlier in a Soyuz spacecraft from Baikonur

Cosmodrome in
Kazakhstan. Ron Hashiro, AH6RH, in Honolulu was among the lucky ones. He tells ARRL that after putting out a blind call, he spoke not only with Simonyi but with Expedition 14/15 Flight Engineer Suni Williams, KD5PLB.

"I mentioned to her that I had listened to her earlier contact with the school in India and it was a thrill to speak with her directly," Hashiro recounted. "She said that Hawaii was her favorite place and had some relatives in Hawaii." Then, Hashiro says, Williams told him someone else was
interested in talking with him, and Simonyi came on a few minutes later.

"I welcomed Charles to ham radio and asked him if he was the author of the
"Hungarian notation" of Windows programming, which he acknowledged," said
Hashiro. He told Simonyi that he was involved in Windows programming more
than 20 years ago, and was glad to meet its creator. Hashiro deemed the occasion "a fabulous and eventful evening."

Flying under contract with the Russian Federal Space Agency, Simonyi also
has been running through a list of four scheduled Amateur Radio on the International Space Station (ARISS) school contacts, including one with a
school in his native Hungary.

On April 12, Simonyi responded via Amateur Radio to upward of 30 questions
posed by students at Fairborn High School in Ohio, telling them he's enjoying microgravity now that he's become used to it. Simonyi also talked
about why he wanted to go into space.

"I wanted to make a contribution to civilian space flight and assist in space station research, and also to have a fantastic experience," he said.
As to why he flew with Russian cosmonauts and not with NASA, Simonyi said,
"NASA doesn't fly space tourists yet, so the Russians are the only game in
town." Simonyi paid a reported $25 million for his space adventure.

While in space, Simonyi will do some maintenance on the ham radio gear aboard the ISS as well as testing to isolate an antenna problem, and he'll
reprogram the Phase 2 NA1SS transceiver to correct a configuration problem.
He'll also conduct some research before returning home April 20 with the Expedition 14 crew of Michael Lopez-Alegria, KE5GTK, and Mikhail Tyurin, RZ3FT, who have been in space since last September. Williams is

scheduled to
return home this summer on the shuttle Endeavour.

Frequencies in use for ARISS general QSOs: Voice and packet downlink: 145.80
MHz (worldwide); Voice uplink: 144.49 MHz for Regions 2 and 3 (the Americas,
and the Pacific) and 145.20 MHz for Region 1 (Europe, Central Asia and
Africa). All frequencies are subject to Doppler shift.

==>GEORGIA TEENAGED HAM WINS 2007 WILLIAM GOLDFARB SCHOLARSHIP

Seventeen-year-old Andrea Hartlage, KG4IUM, of Grayson, Georgia, is the
winner of the prestigious William R. Goldfarb Memorial Scholarship
for 2007.
The ARRL Foundation Board voted unanimously to name Andrea, who will
graduate from Grayson High School next month with a 96.05 grade point
average. Awarded to one high school senior each year, the Goldfarb
Scholarship enables the recipient to receive a four-year undergraduate
degree in engineering or science or in the medical or business-related
fields. Andrea says she was "excited, honored and a little surprised" to be
this year's Goldfarb Scholarship recipient.

"More important, winning the Goldfarb Scholarship has motivated me to be
even more involved in Amateur Radio and the ARRL," she said this week. "My
desire to live up to the expectations of Mr. Goldfarb gives me all the more
reason to excel in college while remaining as involved as possible in ham
radio. Now, more than ever, I am particularly thankful for all of the hams
who have mentored and, in a sense, helped raise me."

Licensed since 2000 and an Amateur Extra class licensee since 2003, Andrea
is the daughter of Scott (KF4PWI) and Lisa Hartlage. She plans to attend
Georgia Institute of Technology this fall to pursue an undergraduate degree
in aerospace engineering. She hopes to co-op with NASA with a long-term goal
of working for the space agency and perhaps joining the Astronaut Corps. Her
academic plans also include graduate school. She hopes to be active in the
Georgia Amateur Radio Club if her schedule permits.

The fifth Goldfarb Scholarship winner, Andrea, an ARRL Life Member,
continues the tradition of prior recipients, demonstrating superior academic
performance, outstanding leadership and extraordinary Amateur Radio and

community service.

For the past few years, Andrea has been an ARRL contributing editor, responsible for the "Youth @ HamRadio.Fun" Web column <http://www.arrl.org/news/youth/>. ARRL Georgia Section Manager Susan Swiderski, AF4FO, has appointed Andrea as Georgia Assistant Section Manager for Youth. But that's only the tip of the iceberg! She also boasts an impressive resume of Amateur Radio honors and accomplishments.

In 2003, the ARRL Board of Directors honored Andrea by naming her to receive the ARRL Hiram Percy Maxim Memorial Award; the following year, she was Amateur Radio Newsline Young Ham of the Year (YHOTY). Andrea coordinated youth activities and the Youth Lounge for ARRL EXPO at Dayton Hamvention in 2005 and 2006, and also was a forum presenter and participant. She also coordinates youth activities for the Georgia State Convention.

She's active in two Amateur Radio clubs, operating CW and phone on HF during contests whenever she can. Her emergency training includes CPR certification, CERT and SKYWARN training as well as three FEMA courses. Over the past two years, Andrea has logged more than 400 volunteer community service hours. She participates in Simulated Emergency Tests and Field Day.

In addition, she volunteers for the Georgia Teen Institute and as Administrative Emergency Operations Center (EOC) Response Team Leader for Gwinnett County Amateur Radio Emergency Service (ARES). She is a member of her radio club Hamfest Committee and volunteers as a communicator for parades, walks, marathons and other events.

Despite her hectic schedule, she still finds time to prepare her Web column for ARRL and to serve as editor in chief of her school newspaper and on the Youth Leadership Conference Youth Advisory Board. She also has served on the National Association of Teen Institutes Board of Directors and on the Governor's Cooperative Agreement Advisory Committee for Youth Substance Abuse Prevention.

For more information about ARRL scholarships, visit the ARRL Foundation scholarships Web page <http://www.arrlf.org/programs/scholarship>.

==>FCC INVITES "OPPOSITIONS" ON TWO "MORSE PROCEEDING" RECONSIDERATION PETITIONS

The FCC has invited opposition comments ("oppositions") to two petitions for reconsideration filed in the wake of the Commission's Report & Order (R&O) in WT Docket 05-235. That R&O altogether eliminated any Morse code examination element to obtain an Amateur Radio license. One petition calls on the FCC to reinstate the 5 WPM Morse code requirement for Amateur Extra class applicants. The second cites problems with the FCC Electronic Comment Filing System (ECFS) and seeks to have the Commission reopen the proceeding for an additional round of comments. Oppositions are due April 27 (comments in support of either petition are not welcome). Replies to oppositions - ie, comments on the opposition comments - are due 10 days later. Petitioner Anthony R. Gordon, KG6EQM, of West Covina, California, contends that "significant national security implications" require that the Commission take another look at the issue.

"As a federal government agency during the ongoing War on Terrorism, it is only prudent that the critical skill of Morse code telegraphy be kept as a hedge against unanticipated national security events and for emergency communication requirements, even if the consensus view or technological trend is in the opposite direction at the present time," Gordon said in his petition, filed February 23. He characterized Morse code proficiency as a "core competency" of the Amateur Radio Service.

In its R&O last December 15, the FCC cast aside arguments that Morse ability was advantageous in emergency communication situations. "The Commission previously addressed the essence of this argument and concluded that most emergency communication today is performed using voice, data, or video techniques," the FCC said. Gordon asked the FCC to restore the Element 1 Morse code examination element for Amateur Extra class applicants.

In a second petition the FCC put on public notice earlier this month, Russell D. Ward, W4NI, of Nashville, Tennessee, argued that the FCC "improperly deleted and suppressed comments received by the e-mail system of the FCC, ECFS." Ward said the FCC was "arbitrarily deleting and suppressing public comments" on the basis of the sender's e-mail address - especially if it contained an Amateur Radio call sign - and charged that the

Commission
"is discriminating against radio amateurs."

As a result, he contends, the process of commenting on the FCC Notice of Proposed Rule Making (NPRM) in WT Docket 05-235 "was flawed," in part because the Commission did not have the advantage of all comments members of
the public may have attempted in vain to post.

Ward's petition, filed February 12, asks the FCC to do one of four things:
Stay WT Docket 05-235, fix the "flawed ECFS," reopen the proceeding for comment or reconsider the "after a valid comment period." The FCC received
more than 3500 public comments in the Morse code proceeding.

Neither Gordon nor Ward addressed the issue of how the FCC should deal with
licensees who qualified for Amateur Extra under the new "no-code" rules that
became effective on February 23.

Both petitions are on the FCC Web site: Gordon's is at
<http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?
native_or_pdf=pdf&id_docume
nt=6518808553>. Ward's is at
<http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?
native_or_pdf=pdf&id_docume
nt=6518808784>.

Interested parties may file oppositions and replies on these petitions for
reconsideration via the Electronic Comment Filing System (ECFS)
<http://www.fcc.gov/cgb/ecfs/> and by serving a hard copy on the petitioner
at his current mailing address. Comments supporting one petition or another
are not welcome, however.

Instructions for filing electronic comments are on the ECFS page. Under "ECFS Main Links," click on "Submit a Filing" and type
"05-235" (without the
quotation marks) in the "Proceeding" field, being sure to include the hyphen.

All statements must be specific to one or more arguments in the reconsideration petition with which the person filing disagrees. They should
not simply say, "I oppose this petition." Only individuals who have filed
oppositions may file replies to oppositions.

==>POLITICAL MANEUVER DIMS CHANCES FOR ARIZONA HAM RADIO ANTENNA LEGISLATION

A political maneuver has ended chances that Arizona lawmakers will adopt an Amateur Radio antenna bill that was in play this session. Proponents of "the Emergency Communications Preservation Act," House Bill 2595 (HB 2595) haven't given up, however. They're still trying, as one put it, "to pull a rabbit out of a hat" and have the bill's language attached to another piece of legislation. HB 2595 called on both municipalities and communities governed by deed covenants, conditions and restrictions (CC&Rs) to reasonably accommodate Amateur Radio antennas. It passed the Arizona House on a 56 to 2 vote. An eleventh-hour bid to keep HB 2595 alive failed, however, after Senate Government Committee Chairman Jack Harper (R-4), declined to move the bill forward for consideration, effectively killing it.
During an e-mail exchange with a bill supporter, Harper attempted to explain why he derailed the measure.

"I just cannot allow the radio operaters [sic] to put up 40' towers over the objection of their neighbors," Harper told Dustin Deppe, K7DTD. "They were not open to negotiating the height, so I could not allow the bill to go forward. Jack." April 3 was the cutoff date for bills to be heard this session. Harper has not responded to an ARRL request to explain why he held the bill.

HB 2595 did not specify any particular minimum height beyond saying that homeowners' associations (HOAs) in CC&R-governed communities "shall provide for reasonable heights and dimensions for accommodation of amateur radio station emergency communications antennae and structures."

City of Page Mayor Dan Brown, NA7DB -- perhaps HB 2595's biggest supporter -- and former state representative Ted Downing, W7KEY, are in the forefront of the effort to pull off the magic trick. Brown has advised Arizona radio amateurs not to send "hate mail" to Harper, however. "It's important to educate," he said, not get angry. If the effort isn't successful, he says, bill proponents will return better prepared next session.

Amateur Radio antenna bills in Maryland and Oklahoma also failed to gain approval of lawmakers. In Maryland, essentially identical bills were

under
consideration in both legislative chambers: House Bill 941 (HB 941) and
Senate Bill 68 (SB 68). "Our bill was voted down by the Senate
committee,
and we had it withdrawn from the House committee," ARRL Maryland-DC
Section
Manager Jim Cross, WI3N, told ARRL. "We will introduce it next year."
The
bills would have required local zoning authorities to comply with the
PRB-1
limited federal pre-emption calling on municipalities to "reasonably
accommodate Amateur Radio communication." Their provisions also would
have
applied to homeowners' associations (HOAs) that had not already enacted
antenna restrictions by the time the bill became law.

In Oklahoma, House Bill 1037 (HB 1037) moved out of the General
Government
and Transportation Committee with a "do pass" recommendation, but it
failed
to be placed on the House calendar for a vote. Eddie Manley, K5EMS, who
tracks FCC and governmental actions for the Oklahoma Section, has
told ARRL
the measure is likely dead for this year, although he left open the
"very
remote possibility" that it could be attached to another bill.

In North Carolina, an Amateur Radio antenna bill has been introduced
in the
state Senate this session, and a House bill is "in the works," ARRL
North
Carolina Section Manager Tim Slay, N4IB, told ARRL. "We're hoping to
make
some headway on it this year."

To date, 23 states have adopted PRB-1 legislation. While PRB-1 requires
reasonable accommodation, it does not specify a minimum height below
which
local governments may not regulate. Four states -- Alaska, Wyoming,
Virginia
and Oregon -- have legislation in place that specifies antenna support
structure heights, below which municipalities may not regulate.

==>PRESIDENT RECOGNIZES RADIO AMATEUR'S DEDICATION TO VOLUNTEER SERVICE

President George W. Bush has honored ARRL member Randy Hatfield,
AG6RH, of
Victorville, California, with the President's Volunteer Service Award. A
volunteer with the City of Victorville Community Emergency Response Team
(CERT) and Emergency Communication Service, Hatfield met briefly with
the
president April 4 to receive the award. President Bush honors local

volunteers as he travels throughout the United States. When a call came from
the White House, Hatfield at first thought he was the victim of an April
Fool's Day prank by ECS Coordinator Robert Barton, W7OES, who nominated
Hatfield for the award a few days earlier.

"Friday, March 30, I was contacted by a woman saying she was calling from
the White House, and I was interviewed over the phone," Hatfield recounted.
"I thought Robert was pulling a very elaborate joke!"

A year earlier, Hatfield had volunteered to help Barton rebuild the ham
radio communication group for ECS. "He didn't really know me that well but
decided to give me a shot," Hatfield said of Barton. "I told him I would do
everything I could to assist him in getting ECS going. My condition was that
I not be made a leader of anything. I was to remain in the background."
Barton, in turn, believed Hatfield should be recognized for his successful
efforts.

On April 1, Hatfield got another call from the same White House staff member
telling him he'd won a Presidential Service Award. "I was nice to her and
played along but knew this was a prank," he says. Nonetheless, he went to
the airport meeting place at the appointed hour on April 4 and learned it
was for real.

Hatfield greeted the president as he disembarked from Air Force One.
President Bush shook Hatfield's hand and presented him with an award pin.
Then, they chatted for a few minutes while photos were taken. He'll receive
the official award document and a signed photo of their meeting in a couple
of weeks.

"I'm supposed to be the behind-the-scenes guy," protested Hatfield, who has
logged more than 500 hours of volunteer service over the past 12 months.

The award recognizes his volunteer work with CERT, a Citizen Corps program
that trains volunteers in basic response skills such as fire safety, light
search and rescue and disaster preparedness. In his volunteer work

with ECS,
which uses Amateur Radio volunteers to assist city and county
personnel in
the event of a disaster or emergency, Hatfield has taught ham radio
classes
to community members. Over the years, Hatfield estimates, he's helped
some
350 individuals to get their ham radio tickets.

Hatfield says he and his wife have been active with the Victorville
CERT and
ECS for a little more than a year. The couple had been involved in CERT
previously when they lived in Marysville, Washington.

In his nomination letter, Barton praised Hatfield for inspiring
others by
example to also volunteer their time and receive CERT and Amateur Radio
training.

"His classes provide hands on and practical applications to the
materials
taught," Barton said. "Randy has made service to his community a
priority in
life by volunteering his time and talents," Barton concluded. "He is
always
there when needed to provide support and resources to accomplish any
task
requested."

==>SOLAR UPDATE

Spotmeister Tad "Saved By Zero" Cook, K7RA, Seattle, Washington,
reports: So
far this month we've observed nine days in a row with zero sunspots.
Based
on predicted smoothed sunspot numbers, if this month and the next are
truly
the solar minimum, we should probably see several weeks in a row with no
sunspots.

The prediction for the next period of unsettled geomagnetic
conditions is
for around April 20, with an expected planetary A index of 20. After
that, a
planetary A index of 25 is predicted for April 28. This same forecast
(from
the US Air Force, via NOAA) shows solar flux of 70 until April 16,
when it
rises to 75. This is a small shift, but it may signal the period during
which we could see another sunspot, April 16-27.

Sunspot numbers for April 5 through 11 were 0, 0, 0, 0, 0, 0 and 0
with, a
mean of 0. The 10.7 cm flux was 70.9, 71, 71.2, 71.1, 69.9, 69.4, and
69.1,
with a mean of 70.4. Estimated planetary A indices were 4, 4, 3, 3,
9, 7 and
4, with a mean of 4.9. Estimated mid-latitude A indices were 3, 2, 2,
2, 8,
6 and 3, with a mean of 3.7.

For more information concerning radio propagation, visit the ARRL
Technical
Information Service Propagation page
<http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: The Georgia and Montana QSO parties, the
JIDX
CW Contest, Radio Maritime Day, and the EU Spring Sprint (CW) are the
April
14-15 weekend. The Run for the Bacon QRP Contest is April 16 (UTC).
The 222
MHz Spring Sprint is April 17 The RSGB 80-Meter Club Championship
(data) is
April 19. The NCCC Sprint Ladder is April 20. JUST AHEAD: The TARA
Skirmish
Digital Prefix Contest, the Holyland DX Contest, the ES Open HF
Championship, Kids Roundup, the EU Spring Sprint (SSB), the Michigan and
Ontario QSO parties, the EA-QRP CW Contest, the YU DX Contest, and
the SKCC
Weekend Sprint are the weekend of April 21-22. The 432 MHz Spring
Sprint is
April 25. The NCCC Sprint Ladder is April 27. See the ARRL Contest
Branch
page <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar
<http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education course registration:
Registration remains open through Sunday, April 22, for these ARRL
Certification and Continuing Education (CEC) program
<http://www.arrl.org/cce/> online courses beginning on Friday, May 4:
The
ARRL Ham Radio License Course (EC-010), Amateur Radio Emergency
Communications Level 1 (EC-001), Radio Frequency Interference (EC-006),
Antenna Design and Construction (EC-009), Analog Electronics (EC-012)
and
Digital Electronics (EC-013). These courses will also open for
registration
Friday, April 20, for classes beginning Friday, June 1. To learn
more, visit

the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or
contact the CCE Department <cce@arrl.org>.

* ARRL HQ seeks Assistant Editor: The ARRL is accepting applications
for the
position of Assistant Editor. The successful candidate for this full-
time
position at ARRL HQ in Newington, Connecticut, will prepare material for
publication in QST, other print publications and the ARRL Web site,
and will
write material for publication. Paid work experience and a college
degree in
a related field preferred. Ham radio license and on-the-air experience
required. Send resume and cover letter to LouAnn Campanello, c/o ARRL
HQ,
225 Main St, Newington, CT 06111, <lcampanello@arrl.org>. ARRL is an
Equal
Opportunity Employer.

* Swains Island DXpedition logs available: The Swains Island N8S
DXpedition
logs now are available online
<http://logsearch.de/index.php?option=com_wrapper&Itemid=73>. As of
week's
end, the N8S crew was approaching 100,000 QSOs, most available via the
online log search engine. In the "Online-Logsearch" window, click
"Search"
and scroll down to N8S (the site provides access to the logs of many
DXpeditions). Click "Search" a second time, and at "Online Log: N8S"
you'll
be prompted to enter your call sign. FYI: The DXpedition reports that
due to
a power failure, QSOs made April 7 between 0856 and 0938 UTC on 17
meters
SSB were lost. YT1AD will handle cards for N8S. The DXpedition is set to
shut down Sunday, April 15.

* FCC Amateur Radio enforcement correspondence posted: The FCC has
posted
new Amateur Radio enforcement correspondence on its "Amateur Radio
Service
Enforcement Actions" page
<http://www.fcc.gov/eb/AmateurActions/Welcome.html>. In mid-March,
the FCC
Enforcement Bureau began publicly posting such correspondence -- with
some
exceptions -- on its own Web site. Special Counsel in the FCC Spectrum
Enforcement Division Riley Hollingsworth sent letters to William F.
Crowell,
W6WBJ, Diamond Springs, CA, and Kevin M. Bednar, K2KMB, Newton, NJ,
on April

3. Direct all questions concerning the Amateur Radio Service Enforcement Actions Web postings via e-mail only to Riley Hollingsworth <fccham@fcc.gov>
in the FCC Spectrum Enforcement Division.

* Dayton Hamvention contesting-related activities noted: Contesters planning
to attend Dayton Hamvention <http://www.hamvention.org> won't want to miss
these activities and social gatherings: Wednesday-Saturday, May 16-19, Contest Super Suite at the Crowne Plaza Hotel, hosted by Contest University
(don't forget the midnight pizza parties Thursday, Friday and Saturday). Thursday, May 17, all day, Contest University
<http://www.contestuniversity.com/> at the Crowne Plaza Hotel. Space is limited. Friday, May 18, 2:30-4:45 PM, Antenna Forum, Hara Arena, Room 1,
Tim Duffy, K3LR, moderator/presenter with Dave Leeson, W6NL, James Breakall,
WA3FET, Ted Rappaport, N9NB, and Dean Straw, N6BV, presenters. Saturday, May
19, 11:15 AM-1:45 PM, Contest Forum, Hara Arena, Room 1, Doug Grant, K1DG,
moderator, with Atilano Oms, PY5EG, Randy Thompson, K5ZD, John Laney, K4BAI,
Charlie Wooten, NF4A, Dick Norton, N6AA, Champ Muangamphun, E21EIC, and Tim
Duffy, K3LR, presenters. Saturday, May 19, 15th annual Dayton Contest Dinner
<http://www.contestdinner.com/>, Crowne Plaza Hotel, hosted by the North Coast Contesters. Space is limited. See the Hamvention Web site
<http://hamvention.org/alternate.htm> for more information about alternate
activities. -- The Daily DX <http://www.dailydx.com> via Tim Duffy, K3LR

==========
The ARRL Letter is published Fridays, 50 times each year, by the American
Radio Relay League: ARRL--the National Association For Amateur Radio, 225
Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259;
<http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news
of interest to active radio amateurs. Visit the ARRL Web site
<http://www.arrl.org> for the latest Amateur Radio news and news updates.
The ARRL Web site <http://www.arrl.org/> also offers informative features
and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/>

is a
weekly "ham radio newscast" compiled and edited from The ARRL Letter.
It's
also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in
whole or
in part in any form without additional permission. Credit must be
given to
The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
==>Editorial questions or comments: Rick Lindquist, N1RL, n1rl@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from
ARRL HQ. To subscribe, unsubscribe or change your address for e-mail
delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member
Data Page" link (in the Members Only box). Click on "Modify membership
data," check or uncheck the appropriate boxes and/or change your e-mail
address if necessary. (Check "Temporarily disable all automatically sent
email" to temporarily stop all e-mail deliveries.) Then, click on
"Submit
modification" to make selections effective. (NOTE: HQ staff members
cannot
change your e-mail delivery address. You must do this yourself via the
Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter
will be
posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston
Amateur Radio
Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this

listserver.)

630. rec.radio.amateur.moderated Posting Guidelines

Newsgroup: rec.radio.amateur.moderated
Date: 2007-04-15 06:00:05 UTC
From: rram@panix.com
Message-ID: <radio/ham-radio/moderated/guidelines-1-1176616800@panix.com>
Source record: 4835
Cross-posted to: rec.radio.amateur.moderated,rec.radio.info,rec.answers,news.answers

```
Posted-By: auto-faq 3.3.2 beta (PGPMoose V2.0, Perl 5.005)
Archive-name: radio/ham-radio/moderated/guidelines
Revision: 1.2 2007/02/22 18:15:39
Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
promoting or defending unlawful activities, etc. Crossposts of regular
discussion articles between rec.radio.amateur.moderated and other
```

discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness,
suitability and/or readiness of any individual (or members of any group)
to be an amateur radio operator are unacceptable in this newsgroup. If
an individual chooses to post asking for advice on when or whether to
obtain an amateur radio license, or to participate in any type of lawful
activity in the Amateur Radio Service, respondents should be careful to
address their comments only to the original poster and not explicitly
generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur
radio licenses, or certain members of national amateur radio societies
(e.g., American Radio Relay League, Radio Amateurs of Canada, Radio
Society of Great Britain, Wireless Institute of Australia, etc.), to be
more or less worthy than others, are not permitted. Posts that politely
encourage individuals to join their local amateur radio society, or to
upgrade to higher classes of amateur radio license in order to enjoy
greater operating privileges, are permitted, however. Posts that
contain reasoned, civil, and fact-based discussion of the activities and
internal politics of national amateur radio societies are also
permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on
rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created
for this purpose, and should be used instead. All such articles will be
rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or
other public relations campaigns will not be permitted. Relatively
unbiased announcements or reviews of new amateur radio-related products
or services may be permitted at the discretion of the moderators. Such
posters are asked to disclose their financial or professional interest,
if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true."

"That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/about/whatis/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

631. WIANEWS for week commencing April 15 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-04-17 02:40:33 UTC
From: nationalnews@wia.org.au
Message-ID: <200704170151.l3H1pWC07341@panix2.panix.com>
Source record: 4836
Cross-posted to: rec.radio.amateur.moderated,aus.radio.amateur,rec.radio.info

This is WIANEWS for week commencing April 15 2007

The Port Macquarie News and the Sydney Morning Herald
are reporting how a radio enthusiast helped save two sailors
stranded in wild seas off Newcastle in VK2.

The operation took 19 hours in five-metre high seas and strong
winds after the propeller shaft of Bob Wilson's 14-metre ketch,
sailing from Queensland to Sydney - broke off and jammed against
the rudder, leaving the vessel stranded nearly 200 kilometres
off the coast.

Harold Ralston was in his shed about 6.30am on Good Friday when
his 25-year-old radio, which he bought for $50 on eBay a year ago,
crackled with a plea from Mr Wilson.

"I heard the boat calling for Foster Tuncurry Coastal Patrol,
or anyone who could hear him, and he couldn't get a response,"
said Mr Ralston.

WIA Director Robert Broomhead has spoken with our "Radio Fan".

(Audio recording of interview between VK3KRB and H. Ralston.)

Never one to mis an opportunity, Robert Broomhead VK3KRB has
already forwarded a ham radio info pack to Harold with the
intend of getting Harold to sit an Amateur Radio Examination!

Iran hostages used Morse code in solitary

One of the British seamen held hostage in Iran has told how
they used Morse code to stay in touch with one another while
imprisoned.

Able Seaman Simon Massey revealed they developed a system of
'knocking in and knocking out' during their first week of
solitary confinement.

He said: "It was like keeping a mental register - checking
off the voices of comrades whenever one of them asked for a
toilet break or a cigarette.

"Leading Seaman Chris Coe was next door to my cell. We would
just sit there tapping out code. We'd check up on each other,
say goodnight, and if we went out of the cell, we would give a
little knock when we got back to let each other know we were OK.

"Just knocking with knuckles. Little things like that got us through."

The use of Morse code by prisoners was made famous in the 1962 classic film Birdman Of Alcatraz. It was also used by PoWs in Vietnam.

The 14 men and one woman sailor were seized by Iranian warships on March 23. It took 13 days to secure their release.

John Moyle National Field Day 2007

Well the John Moyle Memorial National field Day contest has been and gone for this year.

It was pretty successful according to reports from people taking part.

'There seemed to be a lot more stations on the bands than previously' has reported one station.

'Lots more stations on the air than I have heard before,' another station has indicated.

Well this level of activity is NOT being reflected in the number of logs submitted.

So maybe there is something missing?

Whatever can it be?

All of those long hours of planning and preparations that you made and agonised over for so long have either worked or not worked as the case maybe.

The car has been cleaned to remove all of the mud, dust and the grass seeds and even the boot has been tidied out for the first time in a while.

The radios, the aerials, the batteries or generators, the tents, chairs, tables, BBQ's and eskies have all been put away again. The aerials have all been dismantled and stored safely and the all important special gizmo that you will need for the next time has been placed in its own 'special place' -
possibly never to be found again.

In fact all of the tasks that you 'promised to do after you have the weekend to 'play radio' have all been done.

So what else is there that is that could be needed?

There are actually a couple of tasks that you still need to complete.

Firstly, find your log, exercise book, notebook, or what ever you used to record the many contacts that reflect the effort you put into this contest.

Secondly, you need to check that the contacts you made are not duplicates and that the log is actually readable by the contest manager.

Finally, you actually need to submit the log.

It can be submitted in any way that actually still works here in Australia. I think that they cancelled the 'carrier pigeon post' a while ago and the post office telegram service has also long gone into the past?

You can however submit it via old fashioned Snail mail (Actually via ordinary postage). A significant number of people have chosen this way. The addresses that can be used are in the contest rules at www.wia.org.au/contests/ and follow the links to the John Moyle.

You can also submit it by one of the newer 'electronic mail' formats.

Simply send an e-mail to: - vk3zux@hotmail.com or to JMFD@wia.org.au

The actual format you send it in can be either a simple text message, or a WORD document or an EXCEL spreadsheet. Please make sure it is readable by a human as we have had several submissions that are probably the working files of VK Contest Log (VKCL) but are unreadable to the contest manager.

So with many options available there is only one problem.

And what is that I hear you ask?

Well all that is required now is to actually get it submitted to arrive before the deadline of the 30th April 2007.

You have not got much more time to actually get it completed. Well there is still one Public Holiday left this month. So take advantage of the time off and go to the effort of actually submitting the log.

You owe it to yourself and of course to those others who have helped you get on air that weekend and enjoy the contest.

So do it now!!!

You cannot put it off any longer as time is fast running out.

Wouldn't it be a shame, for you not to put in a log, and see a log from another station get an award with fewer points than the one that you could put in?

Thanks for listening, now go and do that log NOW.

(Denis Johnstone - Contest Manager)

Results of 2007 Election of Directors

The WIA Returning Officer David Wardlaw VK3ADW announced the results of the 2007 WIA Election for four Directors:

Robert Mark Broomhead 761
Roger Edward Cordukes 334
Edward William De Young 433
Ewan McLeod 775
Michael John Owen 828
Peter Richard Young 554

Therefore the four positions will be filled by Michael Owen, Ewan McLeod, Robert Broomhead and Peter Young.

Because of the long period between the finalisation of the election and the Annual General Meeting, the WIA Board has amended the Postal Ballot for the Election of Directors Regulations to enable the Returning Officer to announce the result of the election for directors before the Annual General Meeting.

Glenden State School ARISS Link-up

Nineteen students from Glenden State School, Glenden Queensland had a successful direct Amateur Radio on the International Space Station (ARISS) contact with NASA astronaut, flight engineer Sunita Williams the morning of Thursday April 5, 2007.

The direct contact was the culmination of about 9 months of planning. The School applied to participate in the ARISS program in early July of last year and received notification of the upcoming contact only two weeks prior to the event.

Technical preparations for the contact began the Sunday before the event. Shane, VK4KHZ installed his satellite tracking antennae and associated Amateur Radio equipment at the Glenden Recreation Centre, where the event was held.
The entire student population of 230, along with 25 staff members, was present. It is estimated that another 150 others were on hand to hear the contact.

Leading up to the contact, Shane explained to the attentive audience what they were about to observe. Tony, VK5ZAI, the ARISS coordinator for Australia, spoke over a speaker phone and opened the proceedings officially.

Contact with the ISS was made at precisely 8:42am local time, with Sunita Williams coming in loud and clear over Shanes radio. The students managed to get answers to 17 of the 19 questions, taking just over 10 minutes, until the contact ceased. All in the audience were amazed to hear Sunitas voice so clearly and were impressed by her obvious enthusiasm while talking to the students. She has inspired quite a few students to pursue a career as astronauts and to find out more about Amateur Radio!

A local news crew was there to film the event, and two radio interviews with teachers and students were held, one before the contact and one immediately after. Another local radio station was publicising the event for the week prior to the contact.

At the conclusion of the contact it was clear that all in attendance were truly amazed at the Amateur Radio experience they had just witnessed. When the crowd dispersed a lone figure wandered toward the equipment and asked Shane the question..."why do they call this amateur radio, it doesn't look too amateurish to me"

If any listeners are interested in arranging an ARISS contact with their local school please contact Tony, VK5ZAI the Australian Coordinator for ARISS for details.

We thank both Ron VK4FC and Shane VK4KHZ for supplying audio recodings.

BPL INTERFERENCE - THE BATTLE CONTINUES

Full details have now emerged about the latest BPL trial in Queanbeyan, NSW. The trial was announced by Country Energy on the 15th March and is expected to be operational for at least 6 months from May this year. The BPL trial plans to pass 300 households in the Queanbeyan CBD and Jerrabomberra areas, and will provide both access broadband and electricity network management information.

Freshtel will provide an Internet Telephony service to participating customers who, in addition to receiving a modem and access to the broadband service, will receive a free Binatone cordless phone and $30 per month of Freshtel call credit. Country Energy have been "trialling" BPL in Queanbeyan for several years using the older generation 45Mb/s DS2 chipset based Mitsubitishi equipment, producing emission levels measured up to 55dB above the expected ambient noise levels on the 7MHz amateur band. This new trial will use Schneider Electric (Ilevo) equipment using the later generation 200Mb/s chipset, as used in the Mt Beauty BPL trial. Country Energy, which is owned by the NSW State Government, has around 195,000 kilometres of powerlines and 1.4 million power poles, and offers retail electricity in five states and territories. It employs more than 3,900 employees serving more than 870,000 customers.

Detailed maps of the BPL trial areas can be viewed online with the story on the WIA website www.wia.org.au

AROUND VK in 80 Seconds.

VK1

Next CRARC Club meeting - Monday 23rd April

At the next general meeting, will be Keith Malcolm VK1ZKM talking about ITU issues.

Keith is the WIA ITU rep and a very experienced international radio committee person. He is, of course, very active as a

member of the Australian ITU preparatory group that determines
the Australian position in international radio forums.
There are some very complex issues that relate to AR before
the ITU.

VK4

Queensland Digital Group Amateur Radio Information night

The QDG is hosting a Amateur Radio Information night Friday
April 20.

The location is the Volunteer Marine Rescue premises,
Sinbad Street Shorncliffe, a start time of 7:30 PM.

Laurie Pritchard VK4BLE will present the talk with an
emphases on the Foundation Licence and how you can obtain
one with two to three days of study.

All people interested in becoming a Radio Amateur are invited
to hear what Amateur Radio is all about and what it takes to
become licenced.

Further information can be obtained from QDG's information officer
Bill Wilcock VK4ZWJ vk4zwj@qdg.org.au or 3265 3232.

Up to date information can be accessed from the QDG web site
www.qdg.org.au
(Alan VK4YAR)

VK5

>From the Adelaide Hills Amateur Radio Society it's over to
Jim, VK5NB.

The next meeting will be on April the 19th. It will be a
display of member's equipment built over the last 12 months.
The first project for this year will be a two-tone oscillator
kit.Jim Tregellas has given all the details last meeting.
A Pc board will be made available for the kit, more details
soon.

Unfortunately the picnic planned for April has been cancelled.
The date will be re-scheduled in the near future.

If you would like to visit AHARS the club meets at the Belair
Community Hall Belair and that is on the corner of Main Road
and Belair road. The meetings are held every third Thursday
and commence at 7.oo pm.

VK7

STATUS OF N/WEST PROPAGATION BEACONS.

The VK7RAE N/west propagation beacons were finally installed
and commissioned at their new home, the SEA/FM Transmitter Site
located at Don Heads near Devonport, late November 2006.

Unfortunately the 70CM. Beacon on 432.474 caused severe
interference to an Automatic Garage Door Opener at a residence,
located approx. 50 Metres from the transmitter building. The
Door Opener is on a LIPD frequency around 433 Mhz. and
consequently the beacon rendered the garage door opener
completely useless and inoperable by apparent overload and
blocking of the receiver.

It was decided at the time to leave this beacon turned off
until alternative options can be explored.

The 2M. Beacon on 144.474 has worked well since its re
commissioning and receives regular daily reports of being heard
well on the mainland, particularly VK3.

Similarly the 6M. beacon on 50.057 was also received well
in Mainland VK with daily reports. Unfortunately it failed in
late March and is currently being repaired.

The status of all the beacons can be ascertained by amateurs
with APRS facilities. Look for the object VK7RAE BN
and check the comment field. The on / off status of the
beacons is listed for each of the 3 beacons.

Any reception reports or questions can be directed to
NWTARIG email:
nwtarig@spamex.com or Tel. 03 64252923.
(73's Tony VK7AX)

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

REAST JOTA/JOTI Foundation Licence Initiative

Gavin, VK7HGO is actively pursuing and idea of raising interest with
the Wellington District Scout leaders to undertake the Foundation
Licence course prior to the 2007 JOTA/JOTI in October.

REAST will be looking at providing a special Scouting/Guiding
Foundation Licence Course to enable this to happen.

This would provide each scout/guide group with an operator per group
and would really make a great amateur radio focus for this year's
JOTA/JOTI.
(Gavin, VK7HGO)

FUTURE EXAMS

Help amateur radio continue to grow

Do you know someone who could be interested in joining our hobby? Then
encourage them to enrol in a Foundation Licence training course.

VK1

Next Foundation Licence course, and Standard / Advanced assessments.

The CRARC will be undertaking another Foundation Licence course on
the weekend 19th & 20th of MAY.

tHEY will also be running Standard and Advanced Licence Examinations
and Assessments on the Saturday (19th May) for those who wish to sit.

If you wish to sit either the examinations, or do the F.L. Course,
please contact Alan Hawes VK1WX via email to education@vk1.wia.ampr.org
or by phone (after hours) to 02 6258 2568. Please note that all monies
are to be paid by May 7th 2007 !

In Victoria - the Ballarat Amateur Radio Group is now taking enrolments
for its weekend training course and licence assessments on the 5th & 6th
of May.
For more information please contact Craig Cook VK3CMC phone 5342 2448 or
email vk3cmc@bigpond.com.au

At Bendigo classes and licence assessments are conducted by Ross Pittard
VK3FCE who can be contacted via email vk3fce@internode.on.net

The Central Goldfields Amateur Radio Club, Maryborough regularly holds
classes. Contact Peter Rafferty VK3CC on 5460 4387 or email
majorca49@hotmail.com

On the Gold Coast and want to talk to the world through their IRLP and
EchoLink systems? Or already licensed and wish to upgrade Foundation
to Standard? Well classes are held at the Nerang Clubhouse of the
GCARS, ring Roy VK4IG on 5539 3530 Exams can be taken at a time
to suit you. As a matter of fact, they are commencing study for upgrade
to Standard and Advanced licences from toorrow, Monday 16th April, 7.00pm
if your wanting to join up, still time we are told.

CONGRATULATIONS - RESULTS

Last Saturday week four candidates attended a training and
examination session and qualified for their Foundation Licence.

Congratulations to Lloyd Jeffrey, Robert Lambe, Ian Parsissons
and James Swan who are now eagerly awaiting their call signs.
Lloyd is the 14 year son of Alan, VK7KAJ.
(Reg, VK7KK, REAST Education Officer and Assessor)

>From VK1WIA this is the National News Service -
Tune in today...Focus on Tomorrow

AMATEUR RADIO - HOME OF THE GOOD GUYS

We all know the devastation that the tsunami caused around the
North Western Provinces of the Solomon Islands.
The island of Simbo felt the full brunt of the tsunami.
The resulting damage has left Simbo Island villagers without
basic needs. Most village homes were utterly destroyed.

The loss of life has also taken its toll, with many families loosing loved ones.

The Eighty Metre Sewing Circle Net, under the guidance of Don Cripps VK7AY, commenced an on air appeal, on Good Friday, to raise much needed funds to assist with the relief efforts on Simbo Island. The generosity of Amateur operators on this net has been overwhelming. To date, over one thousand dollars has been raised.

One of the nets regular operators, Steve Phillips VK3JY, has first hand knowledge of the devastation on Simbo Island. Steves daughter, who is married to a local resident, has conveyed some harrowing stories and that the Island is in desperate need of assistance.

All monies raised during this appeal will be sent direct to Simbo Island. The entire amount will be used to assist local villagers. They are in need of immediate help and the decision on how to best use the appeal funds will be decided locally. It is very comforting to know that all monies raised will go directly to the local residents that are most in need.

The Sewing Circle Net encourages all Australian Amateur Radio operators to get behind the efforts of raising funds for this very worthy cause. The Sewing Circle Net appeal will close in a few days. So, please support the appeal by coming up on the net at 5.00pm local time on 3.590 MHz and pledge a donation.

Don, VK7AY will record your donation and advise of the many donation lodgment options that are available. Alternatively, give Don a telephone call on 03 - 6428 7768. The number again 03 6428 7768.

Make a point of coming up on the net tonight and pledge a donation.

Your contribution will be very welcome.

This is Vince Henderson, VK7VH, for the Sewing Circle Net, saying thanks for listening.

INTERNATIONAL NEWS

IRAQI AMATEUR RADIO SHUTDOWN CONTINUES

Iraq Amateur Radio Society (IARS) President Diya Sayah, YI1DZ, says there's no end in sight to a ham radio blackout in his country. As part of the new security plan for Baghdad, the Iraqi Ministry of Defense requested in March that radio amateurs remain off the air until security improves.

Because of a miscommunication, however, word failed to reach the Iraqi Communications and Media Commission, which was still issuing licenses.

Sayah chalks up the open-ended ham radio blackout to a misunderstanding of Amateur Radio on the part of Iraq's defense minister. Working through the

Ministry of Education and Scientific Research, the IARS has attempted -- so far without success -- to explain Amateur Radio to the Ministry of Defense.

"Because it's between ministries, this will take time also," Sayah told ARRL, adding that he was not optimistic about getting an opportunity to discuss the issue anytime soon with Iraqi Prime Minister Nouri al-Maliki.

"Now anyone on the air is a pirate, as everyone is obliged not to use their radios at the present time," he added. He said IARS members continue making contacts using Voice over Internet Protocol (VoIP) modes such as IRLP, EchoLink and others.

The Ministry of Defense had asked the IARS to store all licensees' ham radio equipment during the shutdown, but Sayah says that's not happening because of the dangerous situation that persists within the capital.

The ham radio shutdown affects members of the military and contractors holding YI9-prefix call signs. It does *not* apply to Military Affiliate Radio System (MARS) operations, which use military frequencies.
(arrl letter)

==========
NEWS FROM ARNEWSLINE

IRAQ HAM RADIO BLACK-OUT CONTINUES

The shut-down of Amateur Radio in Iraq could continue for a long time. This according to several reports that quote officials of the Iraq Amateur Radio Society. Amateur Radio Newsline's Jeff Reinhardt, AA6JR, has the details:

The Iraq Amateur Radio Society says through Internet postings that it has turned down a government request to warehouse all ham gear owned by Iraqi radio amateurs. This is because its simply to dangerous to go out and collect the equipment.

While Iraq's ham populace may not be radiating R-F, they are still communicating with one-another and with the outside. This, world using Echolink and other V-O-I-P systems over the World Wide Web.

This was confirmed earlier in a posting to the QRZ dot com website where Iraq Amateur Radio Society President Diya Sayah, YI1DZ, indicated this would likely be the case.

Sayah wrote -- and we quote: "Echolink, CQ100, the Internet, cellphones are still working and we had several ham radios working now using these instead of RF." The term "ham radios" in this case referring to operators not actual gear.

The Iraqi ham radio blackout affects anyone operating an Amateur station from that nation. That includes its citizens, outside contractors and even members of other nations military who are stationed in Iraq.

For the Amateur Radio Newsline, Im Jeff reinhardt, AA6JR, in Los Angeles.

As previously reported, the Iraqi Ministry of Defense last month ordered that all Iraqi radio amateurs remain off the air until improvements are made in what it terms as that nations overall internal security. Some political observers in the West believe that could take years if not decades to happen.

HAM RADIO IN SPACE: OSCAR 11 AGAIN HEADED TO ECLIPSE

If you want to use the OSCAR 11 satellite, now is the time to give uit a try. This is the last operational period for the Amsat-OSCAR 11 ham radio satellite before eclipses start on April 20th.

Currently, good, steady signals are being heard from it on 145.826 MHz. If the satellite behaves as it did last year, once the eclipses begin, it is unlikely to be heard for any length of time, during the eclipse period. These continue until August 23rd.

OSCAR 11 also known as UoSAT-OSCAR 11 or UoSAT-2 is one of those long surviving ham radio birds. It was launched into orbit way back on March 1, 1984 on a Thor Delta rocket from Vandenberg Air Force Base in California. It was the first ham satellite to carry a digital store-and-forward communications payload. (AMSAT, G3CWV, ARNewsline)

NEWS SOURCED TO THE RSGB NEWS SERVICE AND READ BY G4NJH

Last time-change signal from Rugby

British timekeeping marked the end of an era with the recent switch to summer time.

This was the last time-change signalled from Rugby, in Warwickshire, which has been the source of the time signal since 1927. From 31st March, the 60kHz signal is being broadcast from Anthorn, Cumbria.

Scot wins DXCC award

Clive Penna, GM3POI, has become only the second person in the world to achieve the nine-band DXCC award using only Logbook of The World electronic QSL confirmations.

John Sluymer, VE3EJ, of Ontario, Canada was the first.

World Amateur Radio Day 2007 Award

A new amateur radio award has been launched to commemorate the World Amateur Radio Day celebrated by the International Amateur Radio Union on 18th April each year.

The WARD 2007 Award, as it is called, is the brainchild of the Polish Radio Amateurs' Journal. It is also supported by the Polish Amateur Radio Union. The award is available for either 10 QSOs on

the HF bands or five QSOs on the VHF bands.

All contacts must be made between 00.01 and 24.00 UTC on 18th April 2007. The award is also available to SWLs for the same numbers of reports.

AUGUST 11/12 Remembrance Day Contest (The RD)
wia.org.au

Trent vk4ti@sampson.net.au says VK4WIA is going Contesting !

"We are on the look out for the very best monoband HF stations in VK4 and VK8 !

Why ? Because the IARU Radiosport competition allows for a Headquarters station to combine all logs into one big score for the event.

Ken Fuller, Secretary of the WIA has organised the use of the Callsign for the VK4 effort . The contest is held the second weekend of July every year and goes for 24 hours.

The modes are SSB and CW and all HF bands are used. That being 160 through ten Metres no WARC. Under the rules the station in this case VK4WIA can have a 160M CW station and a 160M SSB station and these stations can be located anywhere in QLD or the Northern Territory !

So, the vk4 entry could be vk8xx (signing VK4WIA) in Darwin on 10 M vk4fnq(signing VK4WIA) in townsville on 15 etc all these stations would sign the same callsign..and the logs are then combined after the test.

This means if we do this properly we should have 12 separate stations. This is a pretty big task and will take co-rdinating. For example we may need common contest loggers in order to put it all together at the end of the test. It is truly one of the few times that we truly could give the EURO and US stations a run for their money."

So if you would like to be involved or you know someone you could dob in to be involved contact Trent VK4TI email vk4ti@sampson.net.au or phone 0408 497550

SBMS 2GHz and Up World Wide Club Contest
Sponsored by the San Bernardino Microwave Society

For this year, 2007 the contest period runs from 6 a.m. May 12 to 8 p.m. May 13 local time.

This is a club competition in which members tally up their scores and add them with other members' scores to make up a club score.

1. Object

Worldwide groups of amateurs (Clubs) work as many amateur stations in as many different

locations as possible in the world on bands from 2GHz through Light.

2. Date and Contest Period

Second weekend in May. The weekend begins at 6 a.m. local Saturday though 8 p.m. Sunday.

3. Exchange

Six-character Maidenhead Locator; example DM04ww (see April 1994 QST, p. 86 or www.arrl/org/locate/gridinfo.html). Signal report is optional.

4. Miscellaneous

Scheduling contacts is both permissible and encouraged.

Stations are encouraged to operate from more than a single location. A station may be worked again on each band for additional credit after a change of location.

For purposes of the contest, a change of location is defined as a move of at least 16 km (10 miles).

A transmitter used to contact one or more stations may not be used subsequently under any other call during the contest period with the exception for multiple licenses in the same family sharing the same equipment (family rule). The intent of this rule is to prohibit "manufactured" contacts.

5. Scoring

Distance points: The distance in km between stations for each successfully completed QSO. One point per kilometer (eg., 10km is 10 points). QSO points: Count 100 QSO points for each unique call sign worked per band.

In making the distance calculations, a string (or ruler) and map may be used. However, calculations by computer program are preferred. Several such programs are available, including a BASIC program listing in The ARRL World Grid Locator Atlas. For purposes of making calculations, stations are

defined as being located in the center of the 6-character locator sub-square
(most computer programs make this assumption).

6. Multipliers

a.. 2GHz to 10GHz times 1
b.. 24GHz = 2 times
c.. 47GHz = 4 times
d.. 76GHz and up = 8 times

7. Bonus points
100 points bonus may be added for each unique call worked per
band.

1000 points bonus for each band youactivate anf make at least
one contact on

8. Awards

1st place plaque and all club entries will receive a certificate, suitable
for framing.

Send entries no later than 60 days after the contest to be considered.

Submit logs via regular mail only.

SPECIAL EVENTS, BEACON AND NET ADVICE
VK's longest continual net;
The Southern Cross DX Net has been running for 43 years, operates
7 days a week - propagation permitting - on a frequency
of 14.238.5MHz at 1215 zulu.

Saturday, April 28 is the 20th International Marconi Day.
Several dozen stations in locations with a link to Marconi
will be operating on the day.

The Hornsby and Districts Amateur Radio Club will be operating VK2IMD,
the only IMD station in Australasia. They hope to be on all HF bands.

VK2IMD commemorates Ernest Fisk receiving the first direct radio message
from Britain to Australia, at Wahroonga in 1918. This message was
sent from Marconi's station in Caernarfon, Wales.

For more information look for the GB4IMD website.

AusRadio Fox Hunt Report

Paul, VK7FPGB gives a report on last Tuesday night's Ausradio foxhunt in Launceston.

We had a good turn out with 7 people making up 5 teams.

For the first hunt (high power) Jason VK7ZJA was the fox and picked out a very tricky spot in Mowbray behind some buildings. Paul VK7FPGB was the first to find him.

The second hunt saw Paul take the "mini fox" and place it behind a rubbish bin on Talbot Road lookout, Peter was the first to arrive and after him Jason was not far behind both took quite a while to find the fox.

>From my point of view it was one of the best hunts we have had and I am really looking forward to the next one where hopefully we can have a few more people along.

Thanks to everybody who came along.

ARDF Region 3 Championship
The Mongolian Radio Sport's Federation (MRSF) will
be hosting the 7th IARU Region 3 Amateur Radio Direction
Finding (ARDF) Championships, 16 - 21 August 2007,
Ulaanbaatar, Mongolia. Details available from www.mrsf.mn
E-mail
contact@mrsf.mn

Hunting the foxes in city T'PURAM:
Buildings turned oak trees and bikes donned the role of horses as a group of amateur radio operators set out fox hunting in the city on Sunday morning. As many as 16 amateur radio hams, embarked on the fox hunting organised by the Kollam Amateur radio league here on Sunday.

The hunters spotting wireless sets and antennas set out from the Secretariat on their mission at 9 am, as ham foxes Nadarajan, Rajendran and Noushad occupied their position at Pulayanarkotta.

After one-and-a-half hours of hunting, hams Thankachan and Rajesh bagged the first prize, winning a cash prize of Rs 1,000 and the ever-rolling C.A.S.Das trophy. Fox hunting is one of the most popular games among hams, said Kollam amateur radio league president K G Nadarajan. We have been conducting fox hunting games for the last 11 years now. More than fun,

this is basically a training programme for new members on how
to track people, especially during disaster.

WW SIG INTERNET LINKING

IRLP Node 6444 operational

The Townsville IRLP Node 6444 is back online.
TARC IRLP Master Rob VK4RB was able to secure a
broadband Net connection and bring the node back to a
reliable mode of operation on Tuesday April 10th.
The node was out of action for about a month following
the demise of a local and popular ADSL2+ internet service
provider.

Node 6444 interfaces with the VK4RAT UHF Voice Repeater
on 438.225MHz and can be accessed from the cities of
Thuringowa and Townsville and the shires of Burdekin,
Dalrymple and Hinchinbrook plus a generous portion
of waters off the Magnetic Coast.

14290, 18140, 21360, 24960, 28390 kHz (DX)

This years 50th JOTA will run from October 19th at 22:00 hours to October 21st at 24:00 hours YOUR local time.

An official start will be given by the World Scout Bureau radio station in Geneva, Switzerland on October 19th at 21:00 h UTC with a transmission in the 20 and 80 meter bands.

THE SCOUTING 100 AWARD

A new international Amateur Radio award has been launched to mark the centenary of the scouting movement.

Called the Scouting 100 Radio Award it comes in two forms. One is available only to ham radio operators while the other to S-W-L's.

To attain this award, it is necessary to accrue points by contacting or hearing scout or guide stations during 2007. Contacts or reports with individual scout or guide stations count for one point. Special event scout stations are worth two points. The World Jamboree, the Gilwell Park station in the U-K and Brownsea Island stations count for five points each.

There are no restrictions on what bands and modes are used. The award is also available for Echolink and IRLP mode operators. More is on-line at www.scouting100award.org

SOCIAL SCENE

APRIL 15 An historical display of radio

Australia's largest vintage radio show will occur in Melbourne's south-east later this month.

It's part of the 25th anniversary celebrations of the Historical Radio Society of Australia which has members right around the nation.

The show will include a parade of portable radios, a vintage battery store, some military equipment, advice from the experts, radio films, and a sound lounge playing radio shows of yesteryear.

You can even take along an old radio and have it valued on the spot.

This is all happening on Sunday the 15th of April at the Holmesglen Conference Centre, corner of Warrigal and Batesford Roads, Chadstone. That's a 2 minute walk from Holmesglen rail station.

The public is welcome from 1pm - 4pm, entry for adults $5.
More details check out the website www.ozradios.com

APRIL 22 Centre Victoria RadioFest

All is ready for the Centre Victoria RadioFest on Sunday the 22nd of April at the Kyneton Racecourse.

Midland Amateur Radio Club President, Kevin Crockett VK3CKC says there's a degree of nervous excitement with this new major event is only hours away from opening.

Central Goldfields Amateur Radio Club President, Peter Rafferty VK3CC is convinced the RadioFest will be talked about for years to come.

Enthusiastic volunteers from both clubs will be there to make sure all goes well. So should anyone with an interest in radio communications and electronics.

RadioFest has all major commercial traders. Among the door prizes, Vertex Standard has provided a Yaesu FT857D transceiver. Who will be the lucky winners?

Club Corner, an educational lecture series, come n try sniffer foxhunts,
IOTA DXpedition display and do-it-yourself dipoles.

WICEN emergency communications, the WIA, ALARA, ATV, APRS,
F-Troop Net Live with photo call, historical radio display,
helpful advice for anyone wanting to become a radio amateur and lots more.

Check out the website radiofest.amateurradio.com.au for full details.

See you at the family friendly Centre Victoria RadioFest, Kyneton
racecourse less than an hour from Melbourne, Ballarat and Bendigo, next
Sunday 22nd of April.

I'm Bruce Lees VK3FFF and youre listening to VK1WIA.

MAY 5 - 6
The Clareview Gathering is a yearly event where Radio Amateurs meet
at a spot on the coast between Rockhampton and Mackay to relax, talk
radio, re-establish acquaintances and participate in the world renown
Saturday Night Mega-Auction.
It happens in 2007 during the Long Weekend on the 5th and 6th of May.
For further details contact Don Wilschefski VK4BY of the RADAR Club

MAY 12 MDRC Hamfest

The Moorabbin and District Amateur Radio club are please to announce,
this years Hamfest will be held in the usual location, at the Brentwood
Secondary College, Watsons Rd, Glen Waverly on Saturday 12th May 2006 -
doors opening at 10am. The MDRC Hamfest is proud to be Victoria's
biggest and this year will be no exception with displays and sales of
new or preloved equipment, for anyone interested in Radio Communications
and electronics.
Major door prizes, free tea and coffee, light refreshments and a sausage
sizzle will also be on offer.

Trader table bookings and general enquires can be made be emailing
Graeme Lewis VK3GL (vk3gl@aanet.com.au) or by phoning mobile 0418 289928

MAY 12 - BRISBANE HAMFEST
Brisbane Amateur radio Club is holding "BARCFEST 2007" on Saturday
12th May, venue is the Mount Gravatt Showground Logan Road.
If you wish to book a table information can be found on the club's
website http://qsl.net/vk4ba or you can call LesVK4ZLP on 33437247.
Food will be available at the hall, Starting time is 10am.

I don't think that we are ever going to see Amateur Radio appeal to the public at large. Fifty years ago it was difficult to phone outside of your state, today I regularly call relatives in India, Iran and Australia for free on Skype. Kids today who regularly chat with other kids from around the globe on myspace will not be impressed with a hard to hear ham contact with North Dakota.

I flew to India on business, turned on my standard US issued mobile/ cell phone in Mumbai airport and received a call from the US long before I cleared customs. The customs agent just shrugged when he saw my phone. Have you ever tried to take ham equipment into India or get an Indian callsign? Just forget it unless you want to pay some serious "facilitation fees."

The appeal of ham radio is almost historical, like being a classic car buff, but it appeals only to certain segments of the population. I doubt that the july 2003 record of hams will ever be broken, what eliminating the code requirement does is hold the line on decline and make it easier for those who want to try the hobby to try it.

It never did. Never will.

> Fifty years ago it was difficult to phone outside of your state,

Even ten years ago, the cost of long distance telephone calls made them "exotic" or "rare". Today, they're not. OK, fine . . . ham radio has never been limited to just the ability to "talk" to people far away.

today I regularly call relatives in India, Iran
> and Australia for free on Skype. Kids today who regularly chat with
> other kids from around the globe on myspace will not be impressed with
> a hard to hear ham contact with North Dakota.

Yep. So what can we find that *will* impress them? The technical challenge of hooking up a computer to a radio? The challenge of being able to use a digital mode using only a wetware modem? [I'm pitching CW here, for those who might miss it.] Satellites? Helping develop new modes of radio communication? The thrill of tossing a CQ out and not knowing who will respond?

I honestly do not know. We need to somehow communicate the fact that "ham radio" is not synonymous with "talking to someone far away" because this generation knows that the way to "talk to someone far away" is to simply open their cell phone.

> The appeal of ham radio is almost historical, like being a classic car
> buff, but it appeals only to certain segments of the population.

I think that the analogy with collecting is flawed, but I can support the "classic" concept. A better analogy for me is sailing. Obviously the best way to get from point A to point B is *not* by using a sailboat, but I think that interest in recreational sailing is doing pretty well.

Ham radio will never appeal to a broad segment of the population. It never has. But the more facets of the hobby we can get in front of the general population, the better chance we have of attracting a few of them into the hobby.

> I doubt that the july 2003 record of hams will ever be broken, what
> eliminating the code requirement does is hold the line on decline and
> make it easier for those who want to try the hobby to try it.

Oddly enough, leisure-time pursuits are cyclical. It's not beyond the realm of possibility that ham radio might "catch on" at some point, at least for a while, especially now that the code requirement is gone.

If it doesn't . . . well, then it doesn't. I'd love to see an influx of younger people into the hobby, but if that doesn't happen, I'll be long dead before it dies completely.

Kind of like Usenet <grin>

I have made a indoor/outdoor STEALTH of sorts, a Multiband HF LOOP Antenna, approximately 540ft long (from center connector back around to the other side of the connector). I am using 13 gauge - copper - stranded plastic cover - wire! Does anybody have a velocity factor chart?

At the present time - my MFJ Antenna Analyzer has it resonating at approx 10.5Mhz, and I am trying to get it to resonate at 1.8Mhz (160M).

I need the info to try and figure out how much I need to reduce the overall circumference.

Since you already have 2 wavelengths for 160 meters, I wouldn't worry
about shortening the antenna. If your MFJ analyzer has the capability,
find out the impedances at the intended operating frequencies, and
publish those.

You need to match a reactive load, not cut the antenna: there will
always be some reactance in a multiband antenna like yours.

Probably not. Do we want to? Much of what passes "interesting" for the public at large is not interesting to people such as myself. After all, we can only handle so much of "Star Search".

> Fifty years ago it was difficult to phone

The ability to talk to someone across the world through a gargantuan network is everyday stuff now.

The magic is to be able to do it with no more structure that provided by a few components made from essentially refined dirt is the magic part of the whole thing.

If what people want to do is yak at each other, the Telephone is great, and audio chat rooms allow for an internet based talking experience. No thanks.

If however, you enjoy putting a station together, homebrewing and experimentation with the same end in mind, technical acumen accumulation, Emergency comms, or just dealing with a mostly fine group of people, then maybe Amateur Radio is for you.

> I flew to India on business, turned on my standard US issued mobile/

Sounds like a Amateur - unfriendly place. Too bad that!

> The appeal of ham radio is almost historical, like being a classic car
> buff, but it appeals only to certain segments of the population.

Some parts are historical. And the hobby is all the richer for it. I enjoy my modern synthesized, memory laden and DSP aided radios, and I enjoy my old time tube rigs, which have a lot of "cool factor".

Other parts are every bit as modern as the internet. Actually even more so.

> I
> doubt that the july 2003 record of hams will ever be broken, what

Hey, *I'd* like to be able to talk to someone in North Dakota..! A bit
difficult on 70cm from here though <g>

> The ability to talk to someone across the world through a
> gargantuan network is everyday stuff now.

Even so, I still get stopped in the street if I'm using my 70cm
handportable. Notably the other week by a couple of police officers who
were wondering what I was up to..! (If I were doing something "shifty"
would I be drawing attention to myself by using a UHF radio, or would I be
mumbling into a phone like the other 30 people walking by on the
street..?!)

> Telephone is great, and audio chat rooms allow for an
> internet based talking experience. No thanks.

A valid opinion, but there are alternatives. One of my other interests is
old telephones. Most people here will have heard of VoIP (Voice over IP)
telephony. The vast majority of this is run by commercial networks, rather
along the lines of mobile/cellular phone providers, i.e. you pay so much a

month and get a phone number etc.

There is, however, a completely separate network run by and for those who are interested in hooking up their phone systems. Many people around the world, including myself, collect and restore old phones, and some even have complete old electromechanical Strowger-type ex-public exchanges, for example there's a guy I know in Wales who has a complete 1929 exchange up and running in his house..!

Someone thought "wouldn't it be great if we could hook these up and actually use these old phones to actually talk to one another rather than sitting on shelves in a museum type environment" and so the Collector's Network (CNET) http://www.ckts.info was born. There are people from all over the world on it, anyone can call anyone else completely free, and there are several gateways from the PSTN so anyone anywhere can call in and dial someone's old phone somewhere..!

I like talking to people direct, with little or no other infrastructure in the way. Ok I'll chat on the local repeater if I'm mobile, but I prefer to work direct.

> radios, and I enjoy my old time tube rigs, which have a
> lot of "cool factor".
> Other parts are every bit as modern as the internet.
> Actually even more so.

One of my favourite aspects of the hobby was packet radio. I ran a BBS here for 11 years, but it eventually died through sheer lack of interest on the part of the users. I think there were only 2 or 3 regulars left (compared with over 80 in its heyday) at the end. The internet killed it off; why bother with a 2m radio and TNC when you can just send an email or connect to usenet..?

I agree. However, I would like to see it publicized a bit
more before the public so that the public gets an all-
around image of amateur radio rather than the stereotypical
one that has been around for half a century.

>> Fifty years ago it was difficult to phone outside of your state,
>
>Even ten years ago, the cost of long distance telephone calls made them
>"exotic" or "rare". Today, they're not. OK, fine . . . ham radio has
>never been limited to just the ability to "talk" to people far away.

I disagree a bit. Having seen advertisements and amateur
radio magazine article contents for a half century, one
of the most prominent features could be summed up in the
phrase "work DX on HF with CW." :-)

Antennas, transceivers seem to have always mentioned "DX,"
"ability to work the 'rare' ones," "a DX-ers dream" and
other assorted wish-fulfillment phrases designed to sell
goods.

>> ... Kids today who regularly chat with
>> other kids from around the globe on myspace will not be impressed with
>> a hard to hear ham contact with North Dakota.
>
>Yep. So what can we find that *will* impress them?

One way might be the amazed surprise that accompanies
actually BUILDING a radio "from scratch" and making it
work. Anyone can, and many do, just buy a radio or
consumer electronics and the vast majority of those work
right out of the box. Building, with one's own hands,
everything, even from a kit, can be a creative
satisfaction to the majority. The Michael's chain of
arts and crafts store became a success at selling
that kind of creativity.

A few activites such as fox-hunting might be appealing
from the fun of transferring a kid's game ("tag, you're
it", etc.) to more useful pursuits of adulthood (besides
chasing the opposite sex that is, a whole different
endeavor). There's an element of competitiveness in that,
albeit mild. Younger people tend towards competitive
events and "joining teams." It's essentially an outdoors
activity, not "nerdish" sitting still in front of computers.

>The technical challenge of hooking up a computer to a radio?

Not quite that simplistic. Writing (developing, really)
a program FOR a radio-computer interface has direct
application which can be very personalized to user
requirements. That can be VERY creative...especially
if the program result can be used by many others.

>Satellites?

No. To a twentysomething of today they have "always had"
communications satellites.

> Helping develop new modes of radio communication?

Not quite. To do the "new" one needs to understand what
is here and available now. We have so much of the "now"
that a beginner would not know all of it.

> The thrill of tossing a CQ out and not knowing who will respond?

Perhaps. A form of that happens on many personal websites
of today...except that users there do not have license call-
signs. With most users being anonymous, others don't really
know who they are. With amateur licensees one will know
after looking such up on a callsign CD or a website such as
QRZ. A following QSL card, even if a week or two late,
will provide confirmation of that contact.

>I honestly do not know. We need to somehow communicate the fact that
>"ham radio" is not synonymous with "talking to someone far away" because
>this generation knows that the way to "talk to someone far away" is to
>simply open their cell phone.

Steve, "your" generation (and even later) are already using
cell phones besides the teen-agers. :-) And they are talking
short-range, medium-range, and long-range on those phones,
even with those strange ear-growths based on Bluetooth.

>I think that the analogy with collecting is flawed, but I can support
>the "classic" concept. A better analogy for me is sailing. Obviously
>the best way to get from point A to point B is *not* by using a
>sailboat, but I think that interest in recreational sailing is doing
>pretty well.

Allow me to draw a communications parallel in analogies.
The BBS (Bulletin Board System) began in earnest shortly
after the first "hefty" (memory larger than 48K bytes)
personal computers appeared, roughly in the decade from
1982 to 1992 (give or take). I was a part of that then
and really got "into" it. BBS-ing attracted tens of
thousands, perhaps hundreds of thousands, not just in the
USA but worldwide...doing what USENET wanted to be before
the Internet became public and carried it. It was a huge
success with many different BBS intersts...social, technical,
work-oriented (especially with writers), special-interest
groups, you name it. Yes, there were the sexual aspects
but those were actually a minority of all the different
BBS groups.

About the same time, also in larger urban centers, "repeater
clubs" started up, perhaps a bit more chummy than the older
ham clubs since the 'VHFers' were less interested in reaching
out to foreign lands as were the older "DXers." They were
primarily social get-together clubs, much the same as the
social BBSs.

The Internet going public in 1991 halted the BBS expansion
as subscribers shifted from BBSs to the 'web. There was
much more to offer on the Internet...BBSs couldn't keep up
much less try to match it. But, the repeater clubs still
exist, at least here in southern California. Some illustrate
their gatherings and picnics on their websites.

>Ham radio will never appeal to a broad segment of the population.

Then I would say that the old, out-dated stereotypical
"we are the heroes of disasters and emergencies" bragging
ought to be put away. The public that has been IN such
events is aware of who helped them and who didn't.

>But the more facets of the hobby we can get in front of the
>general population, the better chance we have of attracting a few of
>them into the hobby.

True enough to me. But, PR smarts are needed for promotion,
those who can "feel the pulse of the public, the market" and
have been successful in doing PR. Marketeers are always in
front of the public, in competition with existing activities
that don't "reach out" enough.

>Oddly enough, leisure-time pursuits are cyclical. It's not beyond the
>realm of possibility that ham radio might "catch on" at some point, at
>least for a while, especially now that the code requirement is gone.

I really doubt that it will catch on now. So far, the trend
shown in stats is for upgrading, not newcomers. I see the
dropping of the code requirement as 12 to 20 years late.
The interest in ham radio is primarily among those who are

already involved in some form of radio or who are well
acquainted with those who are in radio.

>If it doesn't . . . well, then it doesn't.

That's how it can be... :-)

>I'd love to see an influx of
>younger people into the hobby, but if that doesn't happen, I'll be long
>dead before it dies completely.

Well, this whole PUSH to "get the younger people in" might
be more of wishful thinking by old-timers, themselves thinking
that "all young people" were like they of a long time ago.
I hear/see no real push to sustain youngsters once they got a
taste of the activity. SUSTAINING the interest is important
for that adult group to weather all their other responsibilities
(job, family, etc.) to reach old-timer stage and retirement,
along with some cash to spend on expensive radio toys (that
sustains the market for radio goods producers for everyone).

These "younger people" already have a wealth of competitive
ways to communicate at their disposal. Stuff that neither you
nor I nor any old-timer had when we were young. Old-timers
will decry and denigrate "youngsters" current interests (it
happens with every generation) but that is absolutely *NOT*
the way to approach these younger people. They have to be
touched on their level, not the nostalgia of old-timers
exaggerating their own personal experiences of a bygone era.

To get that influx of younger people, they have to be SOLD
on it. Selling is NOT helped by showing off their middle-
aged selves as "role models of excellence." Younger people
will simply reject that. They could care less if a ham has
personally contacted half the world's hams or been IN amateur
radio since the year dot...if they look "old" they've lost
points before they start.

SELLING requires controlled enthusiasm, "controlled" insofar
as touching younger people on their terms, not the salesman's.
Good salespeople are a bit like actors. They have to assume
a ROLE and do it as natural as possible in that role. Those
"actors" won't win awards to take home, but they can win
awards to carry with them inside for a long time.

The big attraction is, and always has been, "radio for its own sake",
IMHO. The journey more than the destination.

For most people, how a communication gets somewhere doesn't
matter - they're interested in the content only. For most radio
amateurs,
the method matters greatly.

It's like the difference between riding in an airliner and flying your
own
small aircraft. Both will get you from Point A to Point B, and in fact
the
airliner is almost always less expensive, faster, and easier. But it's
not
the same thing.

> > today I regularly call relatives in India, Iran
> > and Australia for free on Skype. Kids today who regularly chat with
> > other kids from around the globe on myspace will not be impressed
> > with a hard to hear ham contact with North Dakota.

That depends on the kids and how amateur radio is presented.

On Monday, thousands of runners finished the Boston Marathon.
26.22 miles in rainy windy weather. The winner finished in 2 hours
14 minutes and some seconds.

If you just want to get from Hopkinton to Boston, there are lots of
ways
that are easier and faster than running. So why do so many thousands
run the Boston Marathon, and many others?

> Yep. So what can we find that *will* impress them?

It's not about impressing people. It's about finding those who
will be *interested* in "radio for its own sake".

> The technical
> challenge of hooking up a computer to a radio?

Some will be interested in that.

> The challenge of being

> "ham radio" is not synonymous with "talking to someone far away"
> because
> this generation knows that the way to "talk to someone far away" is to
> simply open their cell phone.

The main factor is "radio for its own sake". An end in itself, not a
means
to an end. That's the selling point.

Most won't get it. A few will. It is those few we are after.

> > The appeal of ham radio is almost historical, like being a classic car

> pretty well.

Excellent example! Now think about *why* someone would bother
with a sailboat nowadays. It's certainly not about speed, nor ease
of sailing, nor saving money. Sailing requires different skills than
power boating, and arguably more skill and knowledge overall. Yet
the attraction remains. Why?

> Ham radio will never appeal to a broad segment of the population. It
> never has. But the more facets of the hobby we can get in front of the
> general population, the better chance we have of attracting a few of
> them into the hobby.

That's 100% correct. It's also the challenge, because amateur radio
has so many facets and activities that it isn't always easy to quickly

describe.

> > I doubt that the july 2003 record of hams will ever be broken, what
> > eliminating the code requirement does is hold the line on decline and
> > make it easier for those who want to try the hobby to try it.
>
> Oddly enough, leisure-time pursuits are cyclical. It's not beyond the
> realm of possibility that ham radio might "catch on" at some point, at
> least for a while, especially now that the code requirement is gone.

Perhaps. But for that to happen, people have to know amateur radio
exists, and all the things it does. That's hard to put into a 30
second
spot or a sound bite.

As it looks right now, the removal of the last remnants of Morse Code
testing in the USA have not caused any great amount of new growth.
But it's been less than two months - probably too early to tell.

> If it doesn't . . . well, then it doesn't. I'd love to see an influx of
> younger people into the hobby, but if that doesn't happen, I'll be long
> dead before it dies completely.

There *are* younger people coming into amateur radio all the time.
The reason you may not see so many of them, IMHO, is that they
don't have the same situations as in previous generations.

One thing I hear from time to time is that if you look around at a ham
radio club meeting or hamfest, you don't see a lot of young people.
And that's generally true, but not because there aren't a lot of
younger
amateurs.

Most of the "younger people" I know (under the age of, say, 50 or 60)
simply don't get as many large blocks of predictable free time as
their
counterparts of 20, 30, 40, or 50 years ago got. Those in school have
a lot of competing activities, like sports, jobs, homework, etc.
Others
are often dealing with two-career relationships, aging parents,
spouses, ex-spoused, blended families, etc.

The result is that a lot of people have plenty of free time - in small
pieces that happen at odd and uncontrollable intervals. That's one of
the big selling points of computers, email and the internet - it's
ready
when you are, for a minute or an hour.

> ought to be put away.

While I do agree that some of the material that comes out of disasters is overblown, sometimes people do *earn* the right to brag. When folks put a lot of hours into helping out in disasters they deserve recognition.

Why is it so bad to highlight a positive aspect of the hobby? It's not the *only* aspect of the hobby, but hams still do help in disasters. It's one of the few things that we do that the general public can actually relate to. How do you get the general public excited about the thrill of snagging a rare DX station or working your 100th country or even building a radio? But people relate to cell phones that don't work and hams' ability to communicate in those conditions. The fact that cell phones are more reliable these days and hams' capabilities are not needed as often doesn't diminish the message.

> The public that has been IN such
> events is aware of who helped them and who didn't.

They might have an idea what *agency* helped them. But the public has no particular awareness of the infrastructure that facilitated that help. They might understand that a Red Cross feeding vehicle provided them a meal; they don't understand or care how that crew communicated with their headquarters.

With Katrina, the Red Cross found itself with 200+ shelters and no communications with them. Hams helped. Did the people in the shelters know that? In most cases they did not, as there was no reason for them to care how the communications were accomplished.

Don't get me wrong . . . I'm not saying that every ham needs to participate in emergency communications, or that hams are the major players in every disaster. But in spite of the great strides that have been made in making the communications infrastructure more robust, Mother Nature can still throw a sufficiently hard punch to cause severe disruption, and ham radio operators do still play a role in such situations. If the hobby can benefit from accurate, well-written accounts of those activities, what's wrong with that? It's something good that real people do with their real time and resources, and they should get real recognition for it.

Oh, I agree with that, no sweat. What I didn't make clear were
all the others who haven't worked an "emergency" at all and
attach themselves to one.

> Why is it so bad to highlight a positive aspect of the hobby? It's not
> the *only* aspect of the hobby, but hams still do help in disasters.

Yes, some hams do help. I'm not saying none do. But, the
average citizen has been seen helping out in emergencies
and disasters, voluntarily, and get little attention for that.
Why should there be more attention paid to someone who
once took a radio test and has some radio gear available?

> > The public that has been IN such

During the 17 January 1994 Northridge Earthquake aftermath,
FEMA set up a "true" bulletin board at one center for victims.
Several TV screens showing slow pan-circle shots moving
across handwritten messages from family and friends. Watchers
could get a very strong ID from the handwriting in the message.
That was a lot more ID than some "radiogram" form or a
stranger relaying a message over the phone.

> Don't get me wrong . . . I'm not saying that every ham needs to

IF and only IF the radio amateur's equipment ALSO survives.

Familiarity with only ham equipment doesn't automatically
mean certain items of "robust" ham equipment will survive
anything. I've been there and seen the REAL robust stuff
pass environmental tests. Consumer electronics grade,
such as most ham gear, isn't going to sail through without
damage.

> If the hobby can benefit from accurate, well-written
> accounts of those activities, what's wrong with that?

Of course it can. But, one can also write a news thing
many different ways, arranging words to imply lots of
different things. As a student of wordsmithing, as one
who has gotten pay for writing, and after having read
way too much advertising literature, I can spot most of
those right off. :-(

Look to the ARRL for being masters of the above on
their "Letter" of every week. The ARRL does good as a
membership organization but sometimes they DO "sin
by omission" on news.

News stories have got to get OUT of the insular "news
world" of amateur radio in order to reach the PUBLIC.

[...]

Once upon a time, ham radio was a great source of innovation. I
remember hearing about how this or that essential device that we now
take for granted was invented / improved upon / perfected / etc. by hams
who did that sort of thing as part of their hobby. It has been a very
long time since I last heard that said. Ham radio ceased to be forward
looking and innovative and has devolved into something more akin to
stamp collecting - interesting to practitioners, useless to the world at
large.

Ham radio will not grow until and unless it is seen to provide value
to the larger community. Once, it was considered to be a source of
competitive advantage to the economy by contributing to the
technological base (a post-Sputnik point of view). My guess is that the
FCC was willing to ignore the complaints of the ARRL and the old Morse
code cultists because they (the FCC) see it that way, as well.

It may quite possibly be resonant at more than one frequency. For example, if it is actually resonant at 10.5, it is quite possibly resonant at either 2.1 (i.e. 10.5 divided by 5) or 1.5 (i.e. 10.5 divided by 7). So check in the range of each of these two values with your analyzer to see where you stand.

I asked you for information about your antenna in the other
newsgroup and got no response. We need to know the type
and length of your feedline and the resonant frequency
closest to 1.8 MHz.

Unlike dipoles, loops are resonant on integer multiples
of the fundamental resonant frequency. It is likely to
be resonant near 10.5MHz/6 = 1.75 MHz.

It's been a while since I posted on the topic. I received a FAT envelope today from the incoming ARRL buro. I don't know what was wrong, but it seems that Dick has it fixed. There were 46 QSL in there, some dating all the way back to 1992! Yipee!

"Once upon a time" is approximately the time period prior to
World War II...the first 44 years of "radio" as a communications
medium. Trying to judge progress in a technology area involving
hobbyists solely by the information contained in hobbyist
publications is inaccurate, if not outright braggadocio by
hobbyists. "Radio" as a communications medium is now 111 years
old. The innovation, invention, and quantum-jumps in increases
of the communications (and radio) arts of the last 67 years have
totally eclipsed those early pioneering days done by everyone
involved with any RF emission activity. Some of the highlights:

1. "Discovery of 'shortwaves' enabling worldwide communications:
Already known by non-hobbyist technologists. Radio amateurs
were forced upwards in frequency use by politics, not
pioneering. It was fortuitous for amateurs, yes, but not
necessarily of their own and objected-to at the time by
amateurs.

2. SSB: Already used in wireline communications by long-distance
telephony providers in the 1920s; use on HF as "carrier" (multi-
channel) service by commercial and government groups in the
1930s.
Single-channel SSB given boost by USAF contracts for such in the
immediate-post-WWII time.

3. Quartz crystal control of frequency: Already known by academics
and other physical standards workers; WWII needs resulted in mass-
production of crystal units reaching a million units per month; synthetic (man-made) quartz crystal growth perfected by industry in the 1950s. Growth techniques helped the semiconductor industry with similar growth of germanium and silicon ingots.

4. VHF FM voice: Pioneering already begun about 1938 by industry to improve Public Safety mobile communications and adopted by military for universal manpack and vehicular radio in WWII; broadcasting use pioneered by Edwin Armstrong in 1930s for broadcasting industry applications, including music.

5. Superheterodyne receivers: Invention of Edwin Armstrong in 1918, led to almost universal use of superheterodyne architecture
in receivers to the present day in all radio services.

6. Quartz and mechanical-torsion-resonator narrow bandpass filters:
Originally developed by telephony industry for "carrier" long-distance wireline and multi-channel RF communications providers; development of "modern filter theory" spurred by this same application plus long-distance frequency-multiplexed microwave radio relay (transcontinental service). Adoption to most radio architectures possible by man-grown quartz crystal blanks (3).

7. "Channelized" (step-increment) frequency control of Rx, Tx:
First wide use in DoD/USAF contracts for post-WWII single-channel SSB, followed shortly thereafter by air carrier and general aviation radionavigation and radio communications.

8. Use of internal ("embedded") microprocessors for general purpose control of function and frequency: Almost simultaneous in both test equipment and various radio communications services beginning about the mid-1970s. Such enabled reduced interior space, number of total components by eliminating mechanical couplings of controls. Adjunct advantage of providing displays of controls settings and mathematical results of some functions heretofore unavailable with older methods.

9. Digital Signal Processing (DSP): Probable first widespread use for submarine and anti-submarine military use, typically SONAR variations. Followed closely by applications to "music synthesizers" and similar (PC sound cards) and consumer electronics and instrumentation displays. This and item (8) made possible by Large Scale Integration of solid-state devices beginning their explosive growth in the mid-1970s.

The preceding items are just a short list of major innovations as they apply to common amateur radio use of today. It does not begin

to cover major innovations in all electronics, including
applications
to medicine and architectural engineering nor the physical
standards
organizations worldwide.

>Ham radio ceased to be forward
>looking and innovative and has devolved into something more akin to
>stamp collecting - interesting to practitioners, useless to the world at
>large.

"Xxx," to paraphrase Hans Brakob, I would "throw that out with
great force."

The activity of amateur radio is basically a hobby, an activity
done primarily for personal enjoyment...worldwide, I might add.
It is a fascinating one, a technically-challenging one, one of
use in communicating with like-minded enthusiasts, local to
worldwide. Hobbies are FUN for their participants. There is
nothing at all "wrong" with having FUN doing anything, whether
stamp collecting, rebuilding classic cars, flying model aircraft
by radio control, or being advisors for Scouts.

Radio amateurs, by and large, are not into amateur radio for the
sake of being inventors, scientific researchers, manufacturers
of radio-electronics devices, or being emergency and disaster
volunteers. They CAN, of course, as can any citizen without an
amateur radio license.

I could cite an equally-long list of "post-Sputnik" innovations
that have appeared in amateur radio use and technology, done by
radio amateurs themselves. Some, if not most, are citizens of
other countries. However, the more widely-used innovations and
inventions has, from the beginning, come from academicians,
engineers and producers in the electronics industry, and
communications providers. The history of all that explosive
growth has been continually documented in hundreds of trade
journals, professional associations, and scientific journals.
It isn't exclusive to appearing in amateur radio interest
publications.

> Ham radio will not grow until and unless it is seen to provide value
>to the larger community. Once, it was considered to be a source of
>competitive advantage to the economy by contributing to the
>technological base (a post-Sputnik point of view).

Please feel free to document all those "advantages to the
economy." I see very few such cases of the last 111 years of
"radio." What I have seen are a number of claims for same
that very conveniently "sin by omission" [of incorrect
attribution to the overall world of radio and electronics]...
something that marketeers know by the simple acronym of "PR."

> My guess is that the
>FCC was willing to ignore the complaints of the ARRL and the old Morse
>code cultists because they (the FCC) see it that way, as well.

I must disagree with that as well. Since the FCC must regulate
ALL United States civil radio RF emissions, they are chartered
to be aware and informed of almost everything in regards to
"radio." They DO that on a technical level, including having an
Office of Engineering and Technology for their own advisement.
The FCC is aware of nearly ALL radio use, not only in the USA
but worldwide (we are globally interconnected in many
communications ways). The FCC also asks for advice on use and
technology and, as chartered by law, input from ALL citizens.
Such "input" is made available to the public at large, freely.

Anyone can fault the FCC for some alleged political bias. That
is frequent and also many-sided. Such is normal in politics,
but it is not per se some "truth." The ARRL ("my" club) is
no more a paragon of truth than any membership organization
and the FCC is not bound to 'obey' the ARRL 'advice' than any
other special-interest group.

The FCC made a decision on a contentious subject in amateur
radio license examinations. The FCC has the final say on who
is licensed and who is not. The public comment period was long
and over 3,700 citizens commented. The FCC took about a year
to reach a decision on the matter, then made it law by legal
means. Let us accept that and go forward.

650. Searching for a component source...

Newsgroup: rec.radio.amateur.moderated
Date: 2007-04-20 08:58:04 UTC
From: Dave WB4IUY <support@scootworks.com>
Message-ID: <1177042348.695256.275690@q75g2000hsh.googlegroups.com>
Source record: 4755

I'm searching for a source/supplier for a component. I'm not looking to buy from someone here, but simply a source for a part for a project. It is a "through-hole" mount pushbutton switch. It needs to be a maintained contact, push-on push-off, SPST, 5a or better rating. The hole diameter needs to be 3/8" (of slightly less), and I'd like it to have a rubber boot on the button to help keep water out.

Any ideas? I've been searching high and low, in digi-key, mcmaster, radio shack, etc...but no luck. Tried every parts book I have... have seen them in the past, but don't remember the company who made them.

Thanks,
Dave WB4IUY

Due to time limitations, this post will comment on just one of Len's claims:

>   1. "Discovery of 'shortwaves' enabling worldwide communications:
>   Already known by non-hobbyist technologists.

Which ones? And why weren't they *using* those shortwaves before amateurs led the way?

> Radio amateurs
>   were forced upwards in frequency use by politics, not
>   pioneering. It was fortuitous for amateurs, yes, but not
>   necessarily of their own and objected-to at the time by
>   amateurs.

The conventional wisdom of the early professionals in radio was that the longer the wave, the farther it would go along the earth's surface.
The shorter waves were considered useless, or at least unreliable, for long-distance communication, because ionospheric propagation was not known at the time. Long-distance non-amateur radio used waves thousands or tens of thousands of meters long for communications across oceans and beyond. This required enormous antennas and high power levels, all of which were developed for the purpose. The Alexanderson-alternator station SAQ, now a museum that operates a few times per year, is a prime example of the professional state of the art at the time. SAQ operates at 17.2 kHz

After 1912, amateurs were required to use waves no longer than 200 meters. They were further restricted to 1000 watts input, which was very low power by professional long-distance-radio standards.

Most anateurs stayed right at that wavelength, following the professionals' statements that shorter waves were less effective. Some amateurs and non-amateurs conducted experiments at shorter wavelengths but the results were not promising. The radio developments of World War 1 did not materially change the situation.

In those days the "gold standard" of communication was whether the Atlantic Ocean could be crossed. Marconi's claim of transatlantic reception of the single letter "S" was considered a major accomplishment at the time.

In December of 1921, the ARRL sent Paul Godley to the UK to listen for American amateurs on 200 meters. He heard several, and not just coastal stations. But two-way transatlantic communication eluded amateurs on 200 meters.

In November of 1923, documented two-way transatlantic radio communication was achieved on approximately 110 meters by two American and one French amateur, using less than 1000 watts input. This success led to others, with transpacific and antipodal shortwave amateur communications following in short order.

If the effectiveness of shortwave radio was known by nonamateurs, why didn't they use it until after amateurs pointed the way and proved it by their pioneering success?

Amateur Radio Newsline(tm) Report 1549 - April 20, 2007

Amateur Radio Newsline report number 1549 with a
release date of Friday, April 20th, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The space adventure of KE7KDP nears an end as his
QSO total continues to mount. Also, a high seas
rescue radio down-under and the FCC says it only
wants opposition comments on two requests for
reconsideration that ask Morse testing be
restored. We try to sort this one out on Amateur
Radio Newsline report number 1549 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: THE KE7KDP SPACE ADVENTURE DRAWS TO A CLOSE

Dr. Charles Simonyi, KE7KDP, may go down in the
ham radio history books as the most popular space
tourist to ever grace the Amateur Radio
bands. He has been a big hit with everyone with
whom he has held a QSO. Amateur Radio Newsline
producer Bill Pasternak, WA6ITF, has been
following the mission from our newsroom in Los Angeles:

--

Space tourist Charles Simonyi, KE7KDP, turned out
to be one of the most active ham radio operators
to visit the International Space Station. Not
only was he involved in several on-orbit
scientific experiments, he also took time to
share his space adventure by ham radio with
school children around the world. One of his
first contacts using the space stations NA1SS ham
gear was April 12th with Fairborn High School in
the city of Fairborn, Ohio. Those students had
some interesting questions for the intrepid space traveler:

--

Actual contact audio - hear it by downloading the
audio version of this newscast at www.arnewsline.org

--

When he wasn't talking to schools, Dr. Simonyi
used his ham radio airtime to give some high
flying DX contacts to radio amateurs on the
ground. This QSO with Dr. Simonyi again
operating as NA1SS took place when he connected
with Zach Schrempp, KM7I. KE7KDP was flying over
Schrempp's home town of Bothell, Washington when the two made contact:

--

KM7I / KE7KDP QSO audio, Hear it by downloading
the audio version of this newscast at www.arnewsline.org

--

A few days later we got to ask KM7I his feelings
about Dr. Simonyi's dedication to ham radio while on-orbit:

--

KM7I: "I think it is great that Dr. Simonyi is
operating the ham radio equipment while on orbit,
both for casual and school contacts. The ARISS
ham radio school contact program is an excellent
experience for many people around the world to
learn more about life in space, and it's great that he is participating in
it."

--

But KM7I was not the only one that Dr. Simonyi
contacted from orbit during that pass. Heres a
condensed version of several other QSO's:

--

Actual contact audio - hear it by downloading the
audio version of this newscast at www.arnewsline.org

--

All in all, it sounds as if Charles Simonyi,
KE7KDP, not only fulfilled his dream of flying in
space but has put space into the hamshack of
anyone who tuned in. And for that a lot of folks here on Earth say thanks.

For the Amateur Radio Newsline, I'm Bill
Pasternak, WA6ITF, at the studio in Los Angeles.

--

Depending on when you hear this newscast, Dr.
Simonyi will either be on his way back from his
space adventure or already landed. We say

"welcome home and a job well done. A complete
wrap up on Charles Simonyi's trip to the ISS is
on-line at www.charlesinspace.com (ARNewsline
with audio supplied by KM7I and the ARISS Telebridge Archive)

**

RESCUE RADIO: VK RADIO ENTHUSIAST SAVES TWO IN THE PACIFIC

A radio hobbyist in Australia is credited with
saving the lives of two men battling treacherous
seas. This, during a day-long Good Friday ordeal
in the Pacific Ocean. Roobert Broomhead, VK3KRB, reports::

--

The Port Macquarie News and the Sydney Morning
Herald are reporting how a radio enthusiast
helped save two sailors stranded in wild seas off Newcastle in V-K-2.

Bob Wilson and his friend Mike Ross were sailing
from Queensland to Sydney in when their boats
propeller broke off and jammed against the
rudder. This left the vessel stranded nearly 200
kilometers off the coast with no way for Wilson
and Ross to control its speed or direction.

Enter Harold Ralston. Ralston was out in his
shed about 6.30am on Good Friday when his
25-year-old maritime radio, which he bought for
$50 on eBay a year ago, crackled with a plea from
an operator on a stranded boat:

--

Ralston: "I turned the radios oni¿½I heard the
boat calling for Foster Tuncurry Coastal Patrol,
or anyone who could hear himï¿½he called for 3 or 4 minutes."

--

Ralston is not a ham. In North America he might
best be called a Utility Station monitoring
hobbyist. As a part of his monitoring he listens
to the coastal marine channels. And when he
heard the call for assistance, he knew exactly what to do:

--

Ralston: "No one responded so I replied to
himï¿½.He came back to me straight away and told me
that his predicament and wanted to pass a message
on to Foster Tuncurry Coastal Patrol because he
was overdue. So I took the particulars of what

happened to his boat which was particularly serious in that his propeller shaft had come loose from the gearbox and lodged against the rudder and he did not have any measure of propulsion and he could not steer the boat. So I relayed that to the Foster Tuncurry Coastal Patrol and the Port Macquarie Coastal Patrol and that's what started the ball rolling.

--

Newcastle Water Police responded to the call for help. They soon reached the stricken vessel and began an eight-hour towing mission back to Port Macquarie. The rescue was completed when the two ships reached port at 7am on Easter Saturday. That was about 24 hours after Wilson and Ross put out their call for help that was heard and answered by now rescue radio hero, Harold Ralston.

For the Amateur Radio Newsline, I'm Robert Broomhead, VK3KRN, of the WIA National News repotting from Australia.

--

The two mariners have called Ralston a hero. Their boat is berthed in port and news reports say that it will stay there until it has been repaired. (WIA News)

**

MORSE: HOSTAGE SAILORS USE CW TO KEEP IN TOUCH

One of the British seamen held hostage in Iran has told how they used Morse code to stay in touch with one another while imprisoned. Felix Scerri, VK4FUQ, reports:

--

Able Seaman Simon Massey revealed they developed a system of 'knocking in and knocking out' during their first week of solitary confinement.

He said: "It was like keeping a mental register - checking off the voices of comrades whenever one of them asked for a toilet break or a cigarette.

"Leading Seaman Chris Coe was next door to my cell. We would just sit here tapping out code. We'd check up on each other, say goodnight, and if we went out of the cell, we would give a little knock when we got back to let each other know we were OK.

"Just knocking with knuckles. Little things like that got us through."

The use of Morse code by prisoners was made famous in the 1962 classic film Birdman Of Alcatraz. It was also used by PoWs in Vietnam.

--

The 14 men and one woman sailor were seized by Iranian warships on March 23rd. It took 13 days to secure their release. (WIA News)

**

RESTRUCTURING: FCC INVITES ONLY OPPOSITION COIMMENTS ON TWO MORSE RECONSIDERATION PETITIONS

Back here in the USA, we have one of the strangest stories out of Washington in a long time. It comes from the ARRL Letter which reports that the FCC has invited only opposition comments to two petitions for reconsideration on the Report and Order in WT Docket 05-235. That's the regulatory change that eliminated any Morse code examination to obtain a United States Amateur Radio license.

As expected, there have been several Petitions for Reconsideration filed. One petition calls on the FCC to reinstate the 5 WPM Morse code requirement for Amateur Extra class applicants. The second cites problems with the FCC Electronic Comment Filing System and seeks to have the Commission reopen the proceeding for an additional round of comments.

Now the FCC is essentially saying that communications to the agency in support of either petition is not welcome, Instead, the only folks it wants to hear from are those who oppose the reconsideration efforts. These opposition filings are due at the FCC no later than April 27th with a reply comment date 10 days later. Both petitions are at the FCC website at http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_docum
ente18808553
and the other
at

http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_docum

RESCUE RADIO: AMERICAN RED CROSS REFUSES TO
NEGOCIATE ON BACKGROUND CHECKS OF HAMS

The American Red Cross has told the ARRL that it
will not back away from its demand that ham radio
volunteers submit to a background check by a
third party contractor. A check that that could
include a examination of that persons finances.

According to a news item on the ARRL website, a
meeting between the League and Red Cross
officials to discuss the matter lead to am
impasse. One with the Red Cross holding firm to
its position on the right to have its contractor
conduct a background check that could include
personal finance check if it deems it to be
necessary and refusing to modify any aspect of it stance.

In recent days, a growing number of hams have
reconsidered volunteering their services to the
Red Cross because of the potential of having
their personal finances made a part of such a
background check. They say that they are freely
giving of their time to assist the relief agency
and should not be subject to this level of lifestyle scrutiny.

As a result of the American Red Cross
intransigence on the matter the ARRL has
reiterated its earlier recommendation. While not
singling out the American Red Cross by name, the
League suggests that its members carefully review
any consent document that permits a private
organization to conduct a background investigation on that person.

The full story is on-line at League's
website. Its in cyberspace at
www.arrl.org/news/stories/2007/04/16/100/?nc=1 (ARRL)

**

RESCUE RADIO: HAM RADIO NOTED IN SKYWARN ARTICLE

Some really good words about ham radio can be
found in the April 13th issue of NOAA Magazine in
a lengthy story about the Skywarn program.

The piece written by Editor Julie Bedford notes
that for more than 35 years, the Skywarn program

has been helping the National Weather Service gather critical information from the field before, during and even after severe weather events. It also notes that nearly 280,000 trained volunteer storm spotters many of whom are radio amateurs help keep their local communities safe. This, by providing reports of severe and hazardous weather and goes into local training programs conducted by the National Weather service in cooperation with local Amateur Radio clubs.

The complete article is on-line at www.magazine.noaa.gov/stories/mag226.htm. In our opinion, its well worth your time to read. (W7VZD)

**

ENFORCEMENT: DOD COMPLAINS ABOUT INTERFERENCE TO RADAR FROM HAMS

If you own and operate a UHF repeater near Otis Air Force Base in Massachusetts or Beale Air Force Base in California you could eventually be asked to take it off the air by the Department of Defense. This, because it is causing interference to the military's PAVE PAWS radar system that you are likely unaware of. But the ARRL has been made aware of the situation and says it is working with the D-o-D to try to eliminate the interference so that the affected machines can remain in operation. Repeater owner operators in the affected areas should read the complete story on the ARRL website at www.arrl.org (ARRL)

**

ENFORCEMENT: COPPER THEFTS COST FOUR LIVES

Four people have been electrocuted in recent days after trying to steal copper cable that they apparently thought was not in use.

DesignLine.com reports that two New Hampshire men were buried last week after they were electrocuted while taking copper wire from an unoccupied power plant in Tyngsboro, Massachusetts. The bodies were found lying alongside bolt cutters and coils of copper wire. According to law enforcement authorities, the men did not have permission to be on the property.

Their deaths followed the electrocution fatalities in Arkansas of two people attempting to strip copper wire from utility

poles. According to news reports, the price of copper has skyrocketed driven partially by the demand for copper for telecommunications transmission. One report says that the problem has gotten so out of hand that the Arkansas state government has passed three bills that crack down on the theft of scrap metal.

Despite continued upgrades to fiber optic systems, copper is still in heavy use for telecommunications systems, worldwide and the thieves know it. (RF Design, CGC)

NAMES IN THE NEWS: NWS HONORS HAM FOR HIS SKYWARN LINKED REPEATERS

A note of congratulations to Charlie Campbell, KC5EZZ, who has been named to receive the 2007 National Oceanographic and Atmospheric Administration's 2007 Environmental Hero Award.

Campbell was nominated by the meteorologists at the San Angelo Texas N-W-S office. This, in recognition of the work he has done in linking repeaters to serve the SKYWARN program in his area.

KC5EZZ was scheduled to receive his award on April 24th in Washington D.C.. A few days earlier his friends from the San Angelo National Weather Service office held a Pizza get-together in his honor. (AA5PK)

THE SOCIAL SCENE: EMCOMMERST 2007 IN RENO MAY 4 - 6

And its only a few days until the doors open at Emcommwest 2007. Don Carlson, KQ6FM is in Reno, Nevada, with more:

--

EMCOMMWEST 2007 IS COMING TO THE BIGGEST LITTLE CITY IN THE WORLD, RENO NEVADA MAY 4TH THROUGH THE 6TH. ONCE AGAIN HAMS FROM ALL OVER THE COUNTRY WILL GATHER IN RENO FOR THE ANNUAL ARRL SPECIALTY CONVENTION, BASED ON EMERGENCY COMMUNICATIONS.

THIS YEAR'S KEYNOTE SPEAKER WILL BE PR GURU AND HELLO CAMPAIGN CREATOR ALLEN PITTS, W1AGP FROM ARRL HQ IN NEWINGTON. ALLEN WILL ALSO DO A FORUM ON BEING AN ARES PIO. OTHER HIGHLIGHTS INCLUDE FORUMS ON HOSPITAL SUPPORT, WORKING WITH EOC'S AND FEMA, ICS TRAINING, BUILDING COMM VANS, ATV AND MUCH MORE.

THERE WILL BE VE TESTING, AND A NEW HAM FORUM TO GET THE NEW HAMS STARTED RIGHT. SATURDAY MORNING A HUGE SWAP MEET, AND A SATURDAY NIGHT BANQUET, FEATURING 2 GUEST SPEAKERS ï¿½ HENRY FEINBERG, K2SSQ WHO GAVE ET HIS COMMUNICATOR IN THE MOVIE, AND DENNIS MOCHENBACKER, K7BV, NOTED CONTESTER NOW WITH YAESU RADIO. THERE WILL BE A VENDOR HALL AND LOTS OF DISPLAY COMMUNICATION VEHICLES TOO.

FOR INFORMATION AND REGISTRATION, CHECK THE WEBSITE AT WWW DOT EMCOMMWEST.ORG. OR EMAIL INFO@EMCOMMWEST .ORG.

FOR THE AMATEUR RADIO NEWSLINE. I'M DON CARLSON, KQ6FM IN RENO.

SCIENCE HISTORY: MORE EINSTEIN LETTERS MADE PUBLIC BY CALTECH

The 10th volume of letters written by or sent to mathematics genius Albert Einstein have been made public under the auspices of the Einstein Papers Project at the California Institute of Technology." The Collected Papers of Albert Einstein - Volume 10" contains letters penned by Einstein between 1909 and 1920.

According to Caltech, the letters discuss many scientific issues, including his association with physicists in Europe and efforts to further confirm his theory of general relativity. But volume 10 also contains letters focusing on personal matters, such as the state of his marriage and his relationship with his sons. He also discusses the challenges he faced with his newly acquired celebrity status.

The volume was published for Caltech by Princeton University Press. For more information, visit www.einstein.caltech.edu on the World-Wide-Web. (Press Release)

**

EMERGING TECHNOLOGY: L-ION BATTERIES FOR YOUR CAR

Japan's Mitsubishi Heavy Industries hopes to start mass production of lithium ion batteries for automotive use in 2010. These rechargeable batteries would be sold to auto makers for use in electric and gas-electric hybrid vehicles.

Sanyo Electric which supplies nickel metal hydride batteries to Honda and Ford is also developing the technology. Also getting into the act are electronics conglomerate Hitachi, car battery manufacturer Yuasa Corp and electronic parts maker Murata Manufacturing.

Lithium ion batteries are more compact than nickel metal hydride batteries, contributing to fuel efficiency. But safety concerns such as overheating remain and the technology is still considered too expensive by many. (Power News)

OPRERATING EVENTS: THE 2007 SBMS 2 GHZ AND UP CONTEST MAY 12 - 13

On the air, the 2007 San Bernardino Microwave Society 2GHz and Up Club Contest runs from 6 a.m. on May 12 to 8 p.m. May 13 local time. This is a club competition in which members tally up their scores and add them with other members' scores to make up a club score. Logs go via regular mail only to Pat Coker, N6RMJ, 40916 179th Street, Lancaster CA 93535. For more information, rules and past scores see the www.ham-radio.com/sbms (SBMS)

**

OPRERATING EVENTS: ARMAD HAM IT UP FOR THE TROOPS - MAY 26th

The next ARMAD will "Ham It Up For The Troops" operating event takes on May 26, beginning at 9 a.m. Eastern time ARMAD has conducted this special event for the past three years. It's primary purpose is to let those that sacrifice know that we support them. More about ARMAD and the "Ham It Up For The Troops" event is on line at www.armad.net (ARMAD)

**

OPRERATING EVENTS: INTERNATIONAL MARCONI DAY

Several U-K special event stations will be on the air April 28th to celebrate International Marconi Day and hams world-wide are invited to make contact. These stations will operate on or close to sites where Marconi carried out experiments or where Marconi equipment was used prior to his death in 1937.

Although the event is not a contest, participants can qualify for award certificates by contacting certain stations. Further information can be found on the web at www.gb4imd.org.uk. (GB2RS)

**

OPRERATING EVENTS: SUBMARINES ON THE AIR

The weekend of April 28th and 29th is the Submarines-On-The-Air Special Event. There will be many submarine based stations on the air using

SSB and C-W on 80 through 10 meters. A special certificate will be available for working 10 of the boats. See http://w0oog.50megs.com/ for more information. (QRZ.com)

**

DX

In D-X, the Swains Island N-8-S DX-pedition made over 115,000 contacts before going Q-R-T on April 15th. An on-line log check is available at www.yt1ad.info/n8s/log.html where you just put in your call to see if you are verified as having worked the operation. Initial QSL cards for N8S shoyuld be going out in about a month. That same group should be back on the air from Samoa as 5W8AA as you hear this report.

DL9MWG will be active from Malta as 9H3RT from April 18th through to the 11th of May. Activity will be on HF, mainly CW. QSL as directed on the air.

And PA5CW will be active portable YB9 from Bali from April 25th to May 10th . QSL this one to his Callbook address.

DL2GAC expects to be active from the Solomon Islands until the 25th of April. No word on what call sign he will be using or his schedule of operation as of this time

Lastly, DS4DRE, is currently active portable from Hong Island. Word is that he will be there until the 30th of June. Activity is on 80 through 10 meters on CW and SSB. QSL via his Callbook address.

(Above from various DX sources)

**

THAT FINAL ITEM: THE MIT BIOSATELLITE PROGRAM - YOUR NAME IN SPACE

And finally this week, for hams and others who cannot afford the million-dollar price tag attached to space tourism, there is an alternative. Just have your name and call go into orbit. Amateur Radio Newsline's Evi Simons tells us how:

--

Hams will be happy to learn that at least their names and callsigns may be able to travel into space for a much smaller fee than that paid by Charles Simmonyi, KE7KDP. It cost him $25 million dollars to visit the I-S-S, but for the rest of us about $140 is a lot more reasonable. And thanks to a group of

Massachusetts Institute of Technology students working on the design of a small research spacecraft to simulate the gravity found on Mars, about 25,000 of us might be able to go into Earth orbit, at least vicariously.

For the past five years, students from MIT's Mars Gravity Biosatellite Program have worked together with others from around the world to create a satellite to study how Martian gravity will affect mammals. They hope their work will pave the way for future manned missions to Mars where gravity is about one-third that here on Earth. And to help fund the project they are selling space on the bird for personal messages.

The entry price is just $35 for one square centimeter of space. There will be at least 100,000 square centimeters of space available, but in order to make the name legible donors will need to buy at least four. That adds up to a mere $140 which is about the street price of a new 2 meter mobile radio.

If you decide to buy in, your name, call and/or logo will be printed on aluminum panels and attached to the spacecraft. The satellite will launch sometime in 2010 and remain on-orbit for 5 weeks. And after that you will be able to say that at least your name and call made it into space.

I'm Evi Simons in New York City for the Amateur Radio Newsline.

--

The Mars Gravity Biosatellite Program is the largest known student-led spacecraft design agenda, with more than 450 student participants from universities around the world. More about it and how to buy space for your name is on-line at www.marsgravity.org (Science Daily, Science OnLine, others)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only

official website located at
www.arnewsline.org. You can also write to us or
support us at Amateur Radio Newsline(tm), P.O. Box
660937, Arcadia, California 91066.

Two reminders before we go. First about our
on-line poll regarding your position on the
concept of Regulation by Bandwidth. To take
part, take your web browser
to www.arnewsline.org. Scroll down and watch for
the word "Polls" on the left hand side of the
page. Then click on the box that is closest to
your view. As soon as you cast your vote you will see the current results.

Also, the nominating season for this years
Amateur Radio Newsline Young Ham of the Year
Award is now open. Any radio amateur age 18 or
younger residing in all 50 United States, plus
Puerto Rico and all 13 Canadian Provinces can
qualify. Full details and nominating forms are
on our special website at www,yhoty.org. Also
see the Vertex-Standard sponsored ad on page 8
of the March issue of QST Magazine.

For now, with Bill Pasternak, WA6ITF, at the
editors desk, I'm Jeff Clark, K8JAC, saying 73
and we thank you for listening.

It occurs to me that if you dont want to buy from "someone here" you negated
a source !
Having said that, the marine industry has many sources.....also industrial
distributers such as "Allied"....get an industrial trade publication and
request the bingo cards promoted in the rear sections.

Henry

I think you two are both correct. 8^) It looks like a difference of
basic versus applied knowledge. That the shortwaves and much much higher
frequencies were known is not in doubt. Scientists were doing research
in GHz range frequencies surprisingly early on.

Amateurs were forced to use frequencies that unknown to them or the
best minds of the time (could be both at once) discovered a lot of
unexpected characteristics of those higher frequencies.

I think that we'll find that time and again, restrictions lead to
innovation.

> In November of 1923, documented two-way transatlantic radio

> it by their pioneering success?

A combination of ignorance (thinking that the higher frequencies were of no use) and simply "betting on the wrong horse". is the answer AFAIAC.

The Amateurs were confined to that area, and the experimentally inclined did their experiments, and viola, a lot of discoveries and advancements were made. It is a great story, and Hams should be proud of that part of their history.

As a more mature technology today, I wouldn't expect many more earth shaking discoveries from Hams.

What is more likely is technological applications, such as my proposed "texter" radio. A VHF (UHF?) text and voice enabled HT like instrument. Text goes out using PSK31, and voice is traditional FM. Seems like an interesting use of a certain almost unused band we all know and love (loathe?)

While the above is only an example, in fact one that many might consider derivative anyhow , I just offer it as a way that Amateurs might get credit for a bit of innovation.

Yes, well, the world was a very different place 50 years ago.

Neither of my parents were required to sign an employment contract which contains a clause to the effect of "anything you invent, even if its on your own time, we own". Yet, such clauses are routine these days in virtually every employment contract I've signed, or seen.

Perhaps we have the lawyerification of America to partially blame?

I'm not really sure. Maybe people are less altruistic today than they were 30+ years ago. Folks today seem to be less likely to invent something and give it away. Instead, they want to invent it, package it, sell it, and make a living/fortune. Can't say there's anything wrong with that, really, most people today would (I think) do the same thing.

Perhaps the popularity of ham radio is declining not because of anything to do with ham radio itself, but instead simply a matter of the changing society in the world as a whole.

GB2RS NEWS Sunday 22 April

The news headlines

* RSGB AGM next weekend

* Large turnout at Kempton Rally

* Workshop for newcomers to microwaves

On Saturday 28 April the 80th RSGB AGM takes place at The National Galleries of Scotland, Edinburgh. Following the AGM a celebratory dinner will be held in the nearby Paramount Carlton hotel. Details of the AGM and how to obtain tickets for the dinner have been published in RadCom and on the RSGB website. The Lothians Radio Society will be providing talk-in from 10am to 11.45 on channel V44, 145.550MHz FM. They will also be operating an AM talk-in service on 144.550 MHz. Car parking restrictions are enthusiastically enforced in the vicinity of the AGM venue and you are advised to contact the talk-in stations for guidance on where to park.

Hundreds of radio hams queued patiently in the scorching sun waiting for the doors to open for the Kempton Rally on Sunday 15 April. The Kempton rally was host to the new RSGB Top Ham competition sponsored by Kenwood UK, Martin Lynch and Sons and RadioFairs.

Over 750 question papers were issued, and the first 100 who retuned their papers received a free commemorative mug. The top six people with the highest scores entered a panel-style quiz hosted by Eugene Sully, G0VIQ, from Big Brother. The quiz was televised round the show and via ATV repeater GB3HV to an internet stream. After an intense, closely fought battle, Chris, G4IFX, took the RSGB Top Ham Trophy and first prize of a Kenwood TS 480SAT HF transceiver presented by David Wilkins of Kenwood. The runner up, John, G4IRN, received a Kenwood TM-27IE transceiver.

On Saturday 9 June the Torbay Amateur Television and Microwave Group will be hosting the fifth in a series of workshops being held throughout the UK. The event is suitable for anyone interested in the microwave bands and the workshop is specifically aimed at those who have no experience of these frequencies.

The day will be structured around a series of introductory talks and practical demonstrations of microwave stations and operation. There will be a number of experienced microwave operators present during the day so that all your questions can be answered. It is to be held at the

Abbrook Park Sports and Social Club, Kinsteignton, Newton Abbot, Devon from 10am and it is free of charge. Ken Harper, G0EKH, is managing the event and anyone wishing to attend this workshop should contact him via e-mail to norstech@blueyonder.co.uk or by telephone on 01626 202 925.

A British radio amateur who made contact with Charles Simonyi, KE7KDP, on the International Space Station has been featured on BBC television. Matty Cunningham, MD0MAN, was filmed for a report by Abbey Jones on Northwest Tonight. The report featured amateur radio in a very positive light and can be viewed online. There is also a report on the BBC web site. Links to the video and report can be found on the RSGB web site. The International Space Station operates in the Amateur Satellite segment of 2 metres, on

145.800 MHz. Amateurs are requested to respect the band plan and keep this frequency clear for Space operations.

The International Amateur Radio Union Region 1 will be holding its second EmCom Party on the Air on Sunday 5 May between 1100 and 1500 UTC on the 40, 20 and 15m bands using the designated emergency centres of activity. Participants are drawn from its member societies' HQ stations and emergency communications groups in the region. The aim of the event is to raise the profile of amateur radio emergency communications, test how usable these frequencies are across Region 1 and create practices for international emergency communication between Region 1 member societies and emergency groups such as RAYNET. It is emphasised that this is not a contest but an emergency communications exercise.

The aim for participants is to contact IARU Region 1 HQ station OF3F in Finland and also as many other national HQ and emergency communication group stations as possible using SSB.

More information on the UK involvement in this exercise can be obtained from the RAYNET HF Team website at www.raynet-hf.net.

Amateur radio film Tune In will be screened at 8pm on Monday 23 April at Richmix, 35 to 47 Bethnal Green Road, London. The organisers request you book in advance by emailing info@fourcornersfilm.co.uk.

The Venice, Marcon section of the Italian radio amateur association, ARI, is offering an award to mark the 70th anniversary of the passing away of Guglielmo Marconi. The award is open worldwide for contacting or listening to radio stations of ARI Marcon Members.

To achieve the score for the award at least 20 points are needed. Final results will be published in the ARI Magazine Radio Rivista and on their website www.arimarcon.com.

GB3LEX, the 10GHz beacon located at the Leicestershire repeater group site near Junction 22 of the M1 motorway, became operational on its assigned frequency of 10368.955MHz during the afternoon of 15 April. It beams south and has a beamwidth of 90 degrees. The erp is 0.5W. Reception reports would be welcome to Geoff, G4AFJ, telephone 01455

823344.

Since the beginning of 2005 the German telecommunication authorities have licensed a propagation study experiment on medium wave MF. The first license for an experimental station on 440 kHz plus/minus 100 Hz was issued to Walter, DJ2LF under the callsign DI2AG. In May 2006, Geri, DK8KW got the second license to operate under the callsign DI2BO at his home location in Peine near Hannover, locator JO52BH.

Early in 2007 the experimental radio licenses were extended to a second frequency. Besides 440 kHz also 505.1 kHz plus/minus 100 Hz may now be used. This frequency falls into the frequency range of the experimental radio group with the callsign WD2XSH in the U.S. Also, the Swedish authorities have issued one license for this frequency range. This frequency is also very close to the new amateur radio band 501 to 504 kHz which was issued recently on an experimental basis.

DI2BO currently transmits in QRSS3 interrupted by CW identification. For the time being the beacon will remain permanently on 24/7 on 505.015 kHz. Reception reports are welcome, either via DK8KW or direct. Correct reception reports will be confirmed by a special QSL card.

Now the rallies for the coming week. [Note to newsreaders: as usual, exercise your judgement about reading the Sunday 22 April events].

On Sunday 22 April the Lough Erne amateur radio show takes place from 12 noon at the Share Centre, Lisnaskea. Details from Alan, GI6PYP, on 07771 811484. On Sunday 22 April the Nantwich Bunker Trust surplus electronic and electrical sale takes place from 10am at The Secret Nuclear Bunker, French Lane, Nantwich, Cheshire. On Sunday 22 April the Andover Radio Amateur Club spring boot sale takes place from 10am at Wildhern Village Hall, SP11 0JE. On Sunday 29 April the Aldridge and Barr Beacon Radio Club surplus electronic and electrical sale takes place at Aldridge Community Centre, Middlemoor Lane, Aldridgre. Details from Ted, M1EWH, on 01922 614169. On Sunday 29 April the Radio-Active Show takes place from 10am at the Civic Hall, Nantwich. Details from Roger Reeves, M0ROJ, on 07747 618131, or on the web at www.radioactiveshow.co.uk. More details of these and future events can be found on pages 96 and 97 of the April edition of RadCom.

Now for news of special events. From 25 May to 6 June, Mike Bryant, GW6NLP and Colin Kenton, MW0JNI, will be running a special event station, GB100TT, in association with Scarlett Point amateur radio society, to celebrate the 100th anniversary of the TT races. It will be based at Scarlett Point Tower in Castletown. For more information log onto www.qsl.net/wars or www.scarlettpoint.com. The Scarborough special events group will kick off their 2007 season of special events stations with GB2EXP over the weekend of 28-29 April. Special event station ON50EU is active until 31 December to celebrate the 50th anniversary of the Treaty of Rome. Look for special event station OX60AD to be on air throughout April to commemorate the 60th anniversary of the US Air Force and the 56th anniversary of the Defence Treaty between the US and

Denmark for the Protection of Greenland. Activity will be on 40, 20, 17, 15 and 10m using CW, SSB and RTTY. The Flight Refuelling ARS is operating special event station GB2FRA from 7 April to 4 May to commemorate its 25th anniversary. Activity will be on HF, VHF and UHF using CW, SSB and FM. Special event station OX60AD OX Sixty AD will be active on 1 to 30 April to celebrate the 60th anniversary of the US Air Force base at Thule. Expect activity on 6, 10, 15, 17, 20, 40 and 80m using CW, SSB and digital modes. Special station EV5IPY is on the air to celebrate the participation of Belarus in the 4th International Polar Year. Operations are conducted under the aegis of the newly born Department of Polar Researches at the Belorussian Geographic Society.

Special callsign HF40PAZ, will be aired until 30 April and again on 1-30 September, to celebrate the 40th anniversary of club station SP6PAZ. Special event station GB75PW will be active from various sites and locations until 31 December to mark the anniversary of Practical Wireless magazine. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Fred, PY2XB will sign VP5/PY2XB from Providenciales Island, NA-002 from April 19 to May 3. Operation will be on the low bands QRO on 16080 and 40m, and WARC bands, 30,17 and 12m. Digital modes including BPSK31 and RTTY will be emphasized. Some unusual islands will be activated for the RSGB IOTA contest in July:

* Proti, Greece, EU-158, will be activated by DL7IO and team.

* Great Bernera, UK, EU-010, will be activated by M0LSB.

* Batz, France, EU-105, will be activated as TM7BA, by F5NCU and F6EHJ.

* Quadra, Canada, NA-091, will be activated by VA7AQ.

* South Marsh (USA), NA-140, will be activated by W3RFA. German Islands and Lighthouses week end takes place from 0000 UTC on 28 April to 2400 UTC on 29 April. Numerous stations will operate from Islands and lighthouses, will be valid for applying to the German Islands Award, GIA, and the German Lighthouses Award, GLA. Operation is on all modes and bands. DL9MWG will be active from Malta as 9H3RT from 18 April to 11 May. Activity will be on HF, mainly CW. PA5CW, will be active portable YB9 from Bali from 25 April to 10 May. Mart, DL6UAA, will be active as 3B8MM from Mauritius starting on 5 April for a few weeks. He will operate mostly CW, but will also give SSTV a try. Bernard, DL2GAC, expects to be active from the Solomon Islands until 25 April. Tony, 3D2AG, is active mostly on 40 and 20m CW as FK/FO5RK from Noumea, New Caledonia until the end of April. Kang, DS4DRE, is currently active as DS4DRE/4 from Hong Island until 30 June. Activity will be on 80-10m, CW and SSB Now the contest news. The RGSB 1st 50MHz contest takes place between 0900 and 1200 on 22 April on the 50MHz band, all modes. The exchange takes the form of RST and SN and Locator and Postcode. The RSGB 50 MHz activity contest takes place between 2000 and 2230 on 24 April on the 50MHz band, all modes. The exchange takes the form of RST

and SN and Locator

The Helvetia Contest takes place between 1300 and 1259 on 28 and 29 April on the 1.8-2.8MHz band, CW, SSB and DIGI modes. The exchange takes the form of RST and SN.

You can find out more about contesting, including a calendar of events and rules, on the HF Contest Committee and VHF Contest Committee websites. Links to these can be found on the RSGB website. Suitable freeware logging programs for RSGB HF and VHF contests are available from a variety of sources - see the links section of the contest committee website. Now the solar factual data for 9 April to 15 April compiled by Neil Clarke, G0CAS.

The solar disc was spotless everyday except for the 14th when a small single spot appeared. This ended a 10 day period with no visible sunspots. Solar activity was once again very low with no solar flares taking place. Solar flux levels varied between 68 and 70 units with the average of 69 units. The 90 day solar flux average on the 15th was 75 units, that's two units down on last week. X-ray flux levels remained below the A1 level everyday. Geomagnetic activity was quiet everyday. The 9th was the most disturbed day with an Ap index of 9 units. This was due to a coronal hole, however, the hole was somewhat smaller and further south than during previous rotations. Therefore, the overall impact was far less intense than expected. The average was Ap 5 units. The ACE spacecraft saw solar wind speeds decline from 540 kilometres per second to 340 by the 14th. Particle densities were low throughout. Bz varied between minus 10 and plus 12 nanoTeslas on the 9th and between minus 1 and plus 3 nanoTeslas on the quiet days. And finally the solar forecast. Sunspots could be visible on some days this week but they should be small and produce no solar flares. Solar activity is expected to continue at very low levels. Solar flux levels should be in the low 70's for most of the week. Geomagnetic activity could be unsettled today due to a small coronal hole. Activity should subside to quiet levels but by next weekend activity could increase again due to another coronal hole. This disturbance could be more substantial than this weekend's disturbance. MUFs during daylight hours at equal latitudes should be about 18MHz for the south and 15MHz for the north. The darkness hour lows should be around 9MHz. Paths this week to South America should have a maximum usable frequency with a 50 per cent success rate of about 24MHz. The optimum working frequency with a 90 per cent success rate will be about 18MHz. The best time to try this path will be between 1300 and 2000 hours UTC. Low geomagnetic activity meant that, despite the very low solar flux levels, HF conditions have been as good as could reasonably be expected at this stage of the cycle. This included openings to the N8S Swains Island DXpedition on 14MHZ, around breakfast time. However, propagation on the higher bands was scattered and brief. Unfortunately, Britain is just too far north to benefit from the transequatorial events at up to 28MHz, which is enjoyed in parts of southern Europe and the United States. As the week ended good tropo was reported at VHF and UHF.

And that's all from the GB2RS propagation team

Next, the Local News:

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA The GB2RS editorial team would like to apologise for missing details of events from Sunday to Tuesday last week.

On Sunday 22 April Basingstoke Amateur Radio Club is having a Foxhunt to find Alan, G8FMH. Contact Frank, M0AEU, by email to barc@2lo.info.

On Sunday 22 April Radio Society of Harrow is having an operating day for GB2DHH at the DeHavilland Heritage Museum, London Colney, from 10am - 2.30pm.

On Monday 23 April Surrey Radio Contact Club is having a planning meeting for VHF NFD 2007. Contact Ray, G4FFY, on 020 8644 7589.

On Tuesday 24 April Home Counties ATV Club is having a technical talk on RSL broadcast station Suzy Radio by John, G8MNY. Contact Dave, M0SAT, on 07780 708849, m0sat@gb3hv.com.

On Tuesday 24 April Horndean and District Amateur Radio Club is having a talk by Peter Rogers on lost, abandoned, and curious churches, chapels and burial grounds. Contact Stuart, G0FYX, on 023 9247 2846, or on the web at www.hdarc.co.uk.

On Tuesday 24 April Newbury and District Amateur Radio Society is having a talk on making honey. Contact Kevin, G6FOP, on 01635 826 397, g5xv@ntlworld.com.

On Tuesday 24 April Stevenage and District Amateur Radio Society is operating HF. Contact Neil, M0ARH, on 01438 217 077.

On Wednesday 25 April Chesham and District Amateur Radio Society is on the air. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 25 April Dover Radio Club is having an operating and natter night. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 25 April Fareham and District Amateur Radio Club is having a talk on the SX28 by Steve, G7HEP. Contact Jim, M1JJN.

On Wednesday 25 April Farnborough and District Radio Society is having a skittles evening at the Jolly Farmer, Blacknest. Contact Colin,

M3IHS.

On Wednesday 25 April Havering and District Amateur Radio Club is having a talk by Alf Morris on the Bethnal Green WW2 disaster. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 25 April Norfolk Amateur Radio Club Bright Sparks DF 100 First Stage on building your Direction kit/informal. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 25 April Worthing and District Amateur Radio Club is having a talk on felons and fingerprints. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 26 April Bittern DX Group is having a final planning meeting for the GB4NSR Centenary Scout Camp Felbrigg Hall. Contact Keith, G0GFQ, on 01263 588 506, keith@g0gfq.com, or on the web at www.bittern-dxers.org.uk.

On Thursday 26 April Reading and District Amateur Radio Club is having an evening visit to Martin Lynch's emporium at Chertsey. Contact Pete, G8FRC, on 01189 695 697.

On Thursday 26 April Shefford and District Amateur Radio Society is having a talk on community radio by Alan Waring of Biggles FM. Contact David, G8UOD, on 01234 742 757.

On Friday 27 April Hilderstone Radio and Electronics Club is setting up and testing its top band DF Rx project. Contact Ken, G3JIX, on 01304 813 175, or by email to mick.howland@btinternet.com.

On Friday 27 April Mid-Sussex Amateur Radio Society is having a lecture by Graham Somerville on noise cancelling equipment". Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 27 April Torbay Amateur Radio Society is having a junk auction night. Contact Dave, G6FSP, by email to g6fsp@tars.org.uk.

On Friday 27 April Wimbledon and District Amateur Radio Society is on the air and having a construction evening. Contact Jim, M0CON, on 020 8874 7456.

On Saturday 28 April Chelmsford Amateur Radio Society is celebrating International Marconi Day at Sandford Mill. Contact Martyn, G1EFL, on 01245 469 008.

On Saturday 28 April Dover Radio Club is running a special event station at South Foreland Lighthouse. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Saturday 28 April Gorleston Amateur Radio Society is meeting at the Short Blue public house, High Street. Contact David, G3OEP, on QTHR, 01493 662 323.

On Saturday 28 April Hastings Electronics and Radio Club is having its spring auction at William Parker School. Contact Gordon, 01424 431 909, or by email to gordon@gsweet.fsnet.co.uk.

On Saturday 28 April Reading and District Amateur Radio Club is running its Foundation License Course. Contact Harry Hogg for details, g3ngx@radarc.org. Contact Pete, G8FRC, on 01189 695 697.

On Sunday 29 April Chesham and District Amateur Radio Society is running its Advanced Licence Course at The White Hall Community Centre. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

NEWS FOR THE SOUTH-WEST

The GB2RS editorial team would like to apologise for missing details of events from Sunday to Tuesday last week. On Wednesday 25 April South Bristol Amateur Radio Club is on the air. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 25 April Taunton and District Amateur Radio Club is operating the club station. Contact William, G3WNI, on 01823 666 234, or by email to g3wni@btinternet.com.

On Wednesday 25 April Thornbury and South Gloucestershire Amateur Radio Club is on the air. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Friday 27 April Guernsey Amateur Radio Society is having a talk on wire antenna design. Contact Phil, GU0SUP.

On Friday 27 April Jersey Amateur Radio Society is having a build a dipole evening. Contact Phil, MJ0JER, by email to gj3dvc@gj3dvc.org.je.

On Saturday 28 April Cornish Radio Amateur Club is celebrating International Marconi Day. Contact Ian, 01872 561 058.

On Saturday 28 April Flight Refuelling Amateur Radio Society is running its Foundation training. Contact Tony, G3PFM, on 01202 622 262.

On Saturday 28 April Poldhu Amateur Radio Club will be operating GB2GM to celebrate International Marconi Day. Contact Keith, G0WYS, on 01326 574 441.

On Sunday 29 April Bailiwick Of Guernsey Raynet Group will take part in the RAYNET Zone 7 Exercise ICE 4. The Control station will be setting up at Beau Sejour from about 9.30am local time and visitors are most welcome. Contact Mike, GU3WHN.

NEWS FOR THE MIDLANDS

The GB2RS editorial team would like to apologise for missing details of events from Sunday to Tuesday last week. On Monday 23 April Gloucester Amateur Radio and Electronics Society is operating HF. Contact Anne, 2E1GKY, on 01452 548478, daytime.

On Monday 23 April Stourbridge and District Amateur Radio Society is having an open shack night. Contact John, M1EJG, on 01562 700 513.

On Tuesday 24 April Derby and District Amateur Radio Society is on the air. Contact Martin, G3SZJ, on 01332 556 875.

On Tuesday 24 April Loughborough and District Amateur Radio Club is on the air. Contact Chris, G1ETZ, on 01509 504 319.

On Tuesday 24 April Mid-Warwickshire Amateur Radio Society is having a direction finding simulation by John, M0JDB. Contact Bernard, M1AUK, on 01926 420 913.

On Tuesday 24 April Worcester Radio Amateurs Association is having its AGM. Request details by email to info@wraa.co.uk.

On Wednesday 25 April Telford and District Amateur Radio Society is having a curry and rice social evening. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Thursday 26 April Stafford and District Amateur Radio Society is having a hints and kinks evening. Contact Graeme, G4NVH, on 01785 604 534, or by email to graeme.boull@ntlworld.com.

On Friday 27 April Coventry Amateur Radio Society is having an introduction to the society's project . Contact John, G8SEQ, on 02476 273 190, or by email to johng8seq@ntlworld.com.

On Friday 27 April Hucknall Rolls-Royce Amateur Radio Club is having a quiz night. Contact Carl, M0XBE, on 07979 092 447, or on the web at www.hrrarc.com.

On Sunday 29 April Aldridge and Barr Beacon Amateur Radio Club is having a surplus radio and electrical goods sale at the Aldridge Central Hall. Contact Charles, 01922 636 162.

NEWS FOR THE NORTH OF ENGLAND The GB2RS editorial team would like to apologise for missing details of events from Sunday to Tuesday last week. On Sunday 22 April Great Lumley Amateur Radio and Electronics Society is running its Foundation course. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Monday 23 April Thornton Cleveleys Amateur Radio Society is having an auction. Contact Jack, G4BFH, by email to jack.duddington@btinternet.com.

On Tuesday 24 April Chester and District Radio Society I having a talk on medical electronics and engineering by Dr Tony Fisher, the head of electronics and computers at the University of Liverpool. Details on the web at www.chesterdars.org.uk, or by email from info@chesterdars.org.uk.

On Tuesday 24 April Halifax and District Amateur Radio Society is on the air with G2UG at Rishworth. Contact Brenda, 2E0YKS, by email to wrenuk10@yahoo.com.

On Tuesday 24 April Wakefield and District Amateur Radio Society is having its AGM. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk.

On Tuesday 24 April Warrington Amateur Radio Club is having a talk on 60 years of Warrington Amateur Radio Club by Mike, M0AWD. Contact Paul, 01925 268 096, or by email to paulg7odj@btinternet.com.

On Wednesday 25 April Great Lumley Amateur Radio and Electronics Society is on the air. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Wednesday 25 April Hornsea Amateur Radio Club is having a DF Night, fox hunting with G4YTV. Contact Steve, G4GPY, on 01482 860 440, or by email to g4gpy@eddiesplace.karoo.co.uk.

On Wednesday 25 April Mid-Cheshire Amateur Radio Society is radio active planning. Contact Richard, G0JIT, by email to rsa@zetnet.co.uk.

On Wednesday 25 April Wirral and District Amateur Radio Club is having an HF technical night with Neil, G4OAR. Contact Tom, G4BKF, on 07050 291 850.

On Thursday 26 April Eden Valley Radio Society is having its first meeting at its new venue, Penrith Royal British Legion Club, at the bottom of Brunswick Road. Details on the web at www.qsl.net/m5txj/evrs.htm.

On Thursday 26 April North Wakefield Radio Club is having a talk on the work of Raynet by Gerald, G3SDY. Contact Nigel, 0113 253 0558.

On Friday 27 April South Manchester Radio and Computer Club is celebrating Samuel Morse's 216th birthday with G3SVW. Contact Ron, on 0161 969 3999.

On Friday 27 April Tynemouth Radio Club is having its AGM. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

On Saturday 28 April Sands Amateur Radio Contest Group is operating GB2AOS at Sunderland Point in celebration the 200th anniversary of the Abolition of Slavery. A special QSL card is being made for the event which will be available to all contacts and Shortwave Listeners. Contact Kev, by email to g6fke@gb7mbc.net.

On Sunday 29 April Great Lumley Amateur Radio And Electronics Society is running its Foundation course. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Sunday 29 April Mid-Cheshire Amateur Radio Society is running Radio Active 2007 and all members are required to help out. Contact Richard, G0JIT, by email to rsa@zetnet.co.uk.

NEWS FOR SCOTLAND The GB2RS editorial team would like to apologise for missing details of events from Sunday to Tuesday last week. On Sunday 22 April Central Scotland FM Group is having its AGM in Bathgate Guide

Hall, Mid Street, Bathgate, West Lothian. Details on the web at www.csfmg.com.

On Sunday 22 April West Of Scotland Amateur Radio Society is having a talk and demo on electronic mapping techniques for SOTA by Jack, GM4COX. Details on the web at www.wosars.org.

On Monday 23 April Dundee Amateur Radio Club is having a club night. Contact Martin, MM0DUN. On Monday 23 April Lothians Radio Society President is having a talk by RSGB President Angus Annan on Captain Kurt Carlsen, W2ZXM, and the sinking of the Flying Enterprise. After lecture he will field a question and answer session on the RSGB and the way ahead. Contact Toby, MM0TSS, on 07739 742 367, or by email to enquiries@lothiansradiosociety.com, or on the web at www.lothiansradiosociety.com.

On Thursday 26 April Aberdeen Amateur Radio Society is having an equipment check and on the air evening. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

NEWS FOR WALES

No news items have been received for Wales this week. NEWS FOR NORTHERN IRELAND

No news items have been received for Northern Ireland this week. And that's the end of this week's GB2RS news broadcast,

prepared by the Radio Society of Great Britain.

GB2RS NEWS Sunday 22 April

The news headlines

* RSGB AGM next weekend

* Large turnout at Kempton Rally

* Workshop for newcomers to microwaves

On Saturday 28 April the 80th RSGB AGM takes place at The National Galleries of Scotland, Edinburgh. Following the AGM a celebratory dinner will be held in the nearby Paramount Carlton hotel. Details of the AGM and how to obtain tickets for the dinner have been published in RadCom and on the RSGB website. The Lothians Radio Society will be providing talk-in from 10am to 11.45 on channel V44, 145.550MHz FM. They will also be operating an AM talk-in service on 144.550 MHz. Car parking restrictions are enthusiastically enforced in the vicinity of the AGM venue and you are advised to contact the talk-in stations for guidance on where to park.

Hundreds of radio hams queued patiently in the scorching sun waiting for the doors to open for the Kempton Rally on Sunday 15 April. The Kempton rally was host to the new RSGB Top Ham competition sponsored by Kenwood UK, Martin Lynch and Sons and RadioFairs.

Over 750 question papers were issued, and the first 100 who retuned their papers received a free commemorative mug. The top six people with the highest scores entered a panel-style quiz hosted by Eugene Sully, G0VIQ, from Big Brother. The quiz was televised round the show and via ATV repeater GB3HV to an internet stream. After an intense, closely fought battle, Chris, G4IFX, took the RSGB Top Ham Trophy and first prize of a Kenwood TS 480SAT HF transceiver presented by David Wilkins of Kenwood. The runner up, John, G4IRN, received a Kenwood TM-27IE transceiver.

On Saturday 9 June the Torbay Amateur Television and Microwave Group will be hosting the fifth in a series of workshops being held throughout the UK. The event is suitable for anyone interested in the microwave bands and the workshop is specifically aimed at those who have no experience of these frequencies.

The day will be structured around a series of introductory talks and practical demonstrations of microwave stations and operation. There will be a number of experienced microwave operators present during the day so that all your questions can be answered. It is to be held at the

Abbrook Park Sports and Social Club, Kinsteignton, Newton Abbot, Devon from 10am and it is free of charge. Ken Harper, G0EKH, is managing the event and anyone wishing to attend this workshop should contact him via e-mail to norstech@blueyonder.co.uk or by telephone on 01626 202 925.

A British radio amateur who made contact with Charles Simonyi, KE7KDP, on the International Space Station has been featured on BBC television. Matty Cunningham, MD0MAN, was filmed for a report by Abbey Jones on Northwest Tonight. The report featured amateur radio in a very positive light and can be viewed online. There is also a report on the BBC web site. Links to the video and report can be found on the RSGB web site. The International Space Station operates in the Amateur Satellite segment of 2 metres, on

145.800 MHz. Amateurs are requested to respect the band plan and keep this frequency clear for Space operations.

The International Amateur Radio Union Region 1 will be holding its second EmCom Party on the Air on Sunday 5 May between 1100 and 1500 UTC on the 40, 20 and 15m bands using the designated emergency centres of activity. Participants are drawn from its member societies' HQ stations and emergency communications groups in the region. The aim of the event is to raise the profile of amateur radio emergency communications, test how usable these frequencies are across Region 1 and create practices for international emergency communication between Region 1 member societies and emergency groups such as RAYNET. It is emphasised that this is not a contest but an emergency communications exercise.

The aim for participants is to contact IARU Region 1 HQ station OF3F in Finland and also as many other national HQ and emergency communication group stations as possible using SSB.

More information on the UK involvement in this exercise can be obtained from the RAYNET HF Team website at www.raynet-hf.net.

Amateur radio film Tune In will be screened at 8pm on Monday 23 April at Richmix, 35 to 47 Bethnal Green Road, London. The organisers request you book in advance by emailing info@fourcornersfilm.co.uk.

The Venice, Marcon section of the Italian radio amateur association, ARI, is offering an award to mark the 70th anniversary of the passing away of Guglielmo Marconi. The award is open worldwide for contacting or listening to radio stations of ARI Marcon Members.

To achieve the score for the award at least 20 points are needed. Final results will be published in the ARI Magazine Radio Rivista and on their website www.arimarcon.com.

GB3LEX, the 10GHz beacon located at the Leicestershire repeater group site near Junction 22 of the M1 motorway, became operational on its assigned frequency of 10368.955MHz during the afternoon of 15 April. It beams south and has a beamwidth of 90 degrees. The erp is 0.5W. Reception reports would be welcome to Geoff, G4AFJ, telephone 01455

823344.

Since the beginning of 2005 the German telecommunication authorities have licensed a propagation study experiment on medium wave MF. The first license for an experimental station on 440 kHz plus/minus 100 Hz was issued to Walter, DJ2LF under the callsign DI2AG. In May 2006, Geri, DK8KW got the second license to operate under the callsign DI2BO at his home location in Peine near Hannover, locator JO52BH.

Early in 2007 the experimental radio licenses were extended to a second frequency. Besides 440 kHz also 505.1 kHz plus/minus 100 Hz may now be used. This frequency falls into the frequency range of the experimental radio group with the callsign WD2XSH in the U.S. Also, the Swedish authorities have issued one license for this frequency range. This frequency is also very close to the new amateur radio band 501 to 504 kHz which was issued recently on an experimental basis.

DI2BO currently transmits in QRSS3 interrupted by CW identification. For the time being the beacon will remain permanently on 24/7 on 505.015 kHz. Reception reports are welcome, either via DK8KW or direct. Correct reception reports will be confirmed by a special QSL card.

Now the rallies for the coming week. [Note to newsreaders: as usual, exercise your judgement about reading the Sunday 22 April events].

On Sunday 22 April the Lough Erne amateur radio show takes place from 12 noon at the Share Centre, Lisnaskea. Details from Alan, GI6PYP, on 07771 811484. On Sunday 22 April the Nantwich Bunker Trust surplus electronic and electrical sale takes place from 10am at The Secret Nuclear Bunker, French Lane, Nantwich, Cheshire. On Sunday 22 April the Andover Radio Amateur Club spring boot sale takes place from 10am at Wildhern Village Hall, SP11 0JE. On Sunday 29 April the Aldridge and Barr Beacon Radio Club surplus electronic and electrical sale takes place at Aldridge Community Centre, Middlemoor Lane, Aldridgre. Details from Ted, M1EWH, on 01922 614169. On Sunday 29 April the Radio-Active Show takes place from 10am at the Civic Hall, Nantwich. Details from Roger Reeves, M0ROJ, on 07747 618131, or on the web at www.radioactiveshow.co.uk. More details of these and future events can be found on pages 96 and 97 of the April edition of RadCom.

Now for news of special events. From 25 May to 6 June, Mike Bryant, GW6NLP and Colin Kenton, MW0JNI, will be running a special event station, GB100TT, in association with Scarlett Point amateur radio society, to celebrate the 100th anniversary of the TT races. It will be based at Scarlett Point Tower in Castletown. For more information log onto www.qsl.net/wars or www.scarlettpoint.com. The Scarborough special events group will kick off their 2007 season of special events stations with GB2EXP over the weekend of 28-29 April. Special event station ON50EU is active until 31 December to celebrate the 50th anniversary of the Treaty of Rome. Look for special event station OX60AD to be on air throughout April to commemorate the 60th anniversary of the US Air Force and the 56th anniversary of the Defence Treaty between the US and

Denmark for the Protection of Greenland. Activity will be on 40, 20, 17, 15 and 10m using CW, SSB and RTTY. The Flight Refuelling ARS is operating special event station GB2FRA from 7 April to 4 May to commemorate its 25th anniversary. Activity will be on HF, VHF and UHF using CW, SSB and FM. Special event station OX60AD OX Sixty AD will be active on 1 to 30 April to celebrate the 60th anniversary of the US Air Force base at Thule. Expect activity on 6, 10, 15, 17, 20, 40 and 80m using CW, SSB and digital modes. Special station EV5IPY is on the air to celebrate the participation of Belarus in the 4th International Polar Year. Operations are conducted under the aegis of the newly born Department of Polar Researches at the Belorussian Geographic Society.

Special callsign HF40PAZ, will be aired until 30 April and again on 1-30 September, to celebrate the 40th anniversary of club station SP6PAZ. Special event station GB75PW will be active from various sites and locations until 31 December to mark the anniversary of Practical Wireless magazine. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Fred, PY2XB will sign VP5/PY2XB from Providenciales Island, NA-002 from April 19 to May 3. Operation will be on the low bands QRO on 16080 and 40m, and WARC bands, 30,17 and 12m. Digital modes including BPSK31 and RTTY will be emphasized. Some unusual islands will be activated for the RSGB IOTA contest in July:

* Proti, Greece, EU-158, will be activated by DL7IO and team.

* Great Bernera, UK, EU-010, will be activated by M0LSB.

* Batz, France, EU-105, will be activated as TM7BA, by F5NCU and F6EHJ.

* Quadra, Canada, NA-091, will be activated by VA7AQ.

* South Marsh (USA), NA-140, will be activated by W3RFA. German Islands and Lighthouses week end takes place from 0000 UTC on 28 April to 2400 UTC on 29 April. Numerous stations will operate from Islands and lighthouses, will be valid for applying to the German Islands Award, GIA, and the German Lighthouses Award, GLA. Operation is on all modes and bands. DL9MWG will be active from Malta as 9H3RT from 18 April to 11 May. Activity will be on HF, mainly CW. PA5CW, will be active portable YB9 from Bali from 25 April to 10 May. Mart, DL6UAA, will be active as 3B8MM from Mauritius starting on 5 April for a few weeks. He will operate mostly CW, but will also give SSTV a try. Bernard, DL2GAC, expects to be active from the Solomon Islands until 25 April. Tony, 3D2AG, is active mostly on 40 and 20m CW as FK/FO5RK from Noumea, New Caledonia until the end of April. Kang, DS4DRE, is currently active as DS4DRE/4 from Hong Island until 30 June. Activity will be on 80-10m, CW and SSB Now the contest news. The RGSB 1st 50MHz contest takes place between 0900 and 1200 on 22 April on the 50MHz band, all modes. The exchange takes the form of RST and SN and Locator and Postcode. The RSGB 50 MHz activity contest takes place between 2000 and 2230 on 24 April on the 50MHz band, all modes. The exchange takes the form of RST

and SN and Locator

The Helvetia Contest takes place between 1300 and 1259 on 28 and 29 April on the 1.8-2.8MHz band, CW, SSB and DIGI modes. The exchange takes the form of RST and SN.

You can find out more about contesting, including a calendar of events and rules, on the HF Contest Committee and VHF Contest Committee websites. Links to these can be found on the RSGB website. Suitable freeware logging programs for RSGB HF and VHF contests are available from a variety of sources - see the links section of the contest committee website. Now the solar factual data for 9 April to 15 April compiled by Neil Clarke, G0CAS.

The solar disc was spotless everyday except for the 14th when a small single spot appeared. This ended a 10 day period with no visible sunspots. Solar activity was once again very low with no solar flares taking place. Solar flux levels varied between 68 and 70 units with the average of 69 units. The 90 day solar flux average on the 15th was 75 units, that's two units down on last week. X-ray flux levels remained below the A1 level everyday. Geomagnetic activity was quiet everyday. The 9th was the most disturbed day with an Ap index of 9 units. This was due to a coronal hole, however, the hole was somewhat smaller and further south than during previous rotations. Therefore, the overall impact was far less intense than expected. The average was Ap 5 units. The ACE spacecraft saw solar wind speeds decline from 540 kilometres per second to 340 by the 14th. Particle densities were low throughout. Bz varied between minus 10 and plus 12 nanoTeslas on the 9th and between minus 1 and plus 3 nanoTeslas on the quiet days. And finally the solar forecast. Sunspots could be visible on some days this week but they should be small and produce no solar flares. Solar activity is expected to continue at very low levels. Solar flux levels should be in the low 70's for most of the week. Geomagnetic activity could be unsettled today due to a small coronal hole. Activity should subside to quiet levels but by next weekend activity could increase again due to another coronal hole. This disturbance could be more substantial than this weekend's disturbance. MUFs during daylight hours at equal latitudes should be about 18MHz for the south and 15MHz for the north. The darkness hour lows should be around 9MHz. Paths this week to South America should have a maximum usable frequency with a 50 per cent success rate of about 24MHz. The optimum working frequency with a 90 per cent success rate will be about 18MHz. The best time to try this path will be between 1300 and 2000 hours UTC. Low geomagnetic activity meant that, despite the very low solar flux levels, HF conditions have been as good as could reasonably be expected at this stage of the cycle. This included openings to the N8S Swains Island DXpedition on 14MHZ, around breakfast time. However, propagation on the higher bands was scattered and brief. Unfortunately, Britain is just too far north to benefit from the transequatorial events at up to 28MHz, which is enjoyed in parts of southern Europe and the United States. As the week ended good tropo was reported at VHF and UHF.

And that's all from the GB2RS propagation team

Next, the Local News:

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA The GB2RS editorial team would like to apologise for missing details of events from Sunday to Tuesday last week.

On Sunday 22 April Basingstoke Amateur Radio Club is having a Foxhunt to find Alan, G8FMH. Contact Frank, M0AEU, by email to barc@2lo.info.

On Sunday 22 April Radio Society of Harrow is having an operating day for GB2DHH at the DeHavilland Heritage Museum, London Colney, from 10am - 2.30pm.

On Monday 23 April Surrey Radio Contact Club is having a planning meeting for VHF NFD 2007. Contact Ray, G4FFY, on 020 8644 7589.

On Tuesday 24 April Home Counties ATV Club is having a technical talk on RSL broadcast station Suzy Radio by John, G8MNY. Contact Dave, M0SAT, on 07780 708849, m0sat@gb3hv.com.

On Tuesday 24 April Horndean and District Amateur Radio Club is having a talk by Peter Rogers on lost, abandoned, and curious churches, chapels and burial grounds. Contact Stuart, G0FYX, on 023 9247 2846, or on the web at www.hdarc.co.uk.

On Tuesday 24 April Newbury and District Amateur Radio Society is having a talk on making honey. Contact Kevin, G6FOP, on 01635 826 397, g5xv@ntlworld.com.

On Tuesday 24 April Stevenage and District Amateur Radio Society is operating HF. Contact Neil, M0ARH, on 01438 217 077.

On Wednesday 25 April Chesham and District Amateur Radio Society is on the air. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 25 April Dover Radio Club is having an operating and natter night. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 25 April Fareham and District Amateur Radio Club is having a talk on the SX28 by Steve, G7HEP. Contact Jim, M1JJN.

On Wednesday 25 April Farnborough and District Radio Society is having a skittles evening at the Jolly Farmer, Blacknest. Contact Colin,

M3IHS.

On Wednesday 25 April Havering and District Amateur Radio Club is having a talk by Alf Morris on the Bethnal Green WW2 disaster. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 25 April Norfolk Amateur Radio Club Bright Sparks DF 100 First Stage on building your Direction kit/informal. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 25 April Worthing and District Amateur Radio Club is having a talk on felons and fingerprints. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 26 April Bittern DX Group is having a final planning meeting for the GB4NSR Centenary Scout Camp Felbrigg Hall. Contact Keith, G0GFQ, on 01263 588 506, keith@g0gfq.com, or on the web at www.bittern-dxers.org.uk.

On Thursday 26 April Reading and District Amateur Radio Club is having an evening visit to Martin Lynch's emporium at Chertsey. Contact Pete, G8FRC, on 01189 695 697.

On Thursday 26 April Shefford and District Amateur Radio Society is having a talk on community radio by Alan Waring of Biggles FM. Contact David, G8UOD, on 01234 742 757.

On Friday 27 April Hilderstone Radio and Electronics Club is setting up and testing its top band DF Rx project. Contact Ken, G3JIX, on 01304 813 175, or by email to mick.howland@btinternet.com.

On Friday 27 April Mid-Sussex Amateur Radio Society is having a lecture by Graham Somerville on noise cancelling equipment". Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 27 April Torbay Amateur Radio Society is having a junk auction night. Contact Dave, G6FSP, by email to g6fsp@tars.org.uk.

On Friday 27 April Wimbledon and District Amateur Radio Society is on the air and having a construction evening. Contact Jim, M0CON, on 020 8874 7456.

On Saturday 28 April Chelmsford Amateur Radio Society is celebrating International Marconi Day at Sandford Mill. Contact Martyn, G1EFL, on 01245 469 008.

On Saturday 28 April Dover Radio Club is running a special event station at South Foreland Lighthouse. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Saturday 28 April Gorleston Amateur Radio Society is meeting at the Short Blue public house, High Street. Contact David, G3OEP, on QTHR, 01493 662 323.

On Saturday 28 April Hastings Electronics and Radio Club is having its spring auction at William Parker School. Contact Gordon, 01424 431 909, or by email to gordon@gsweet.fsnet.co.uk.

On Saturday 28 April Reading and District Amateur Radio Club is running its Foundation License Course. Contact Harry Hogg for details, g3ngx@radarc.org. Contact Pete, G8FRC, on 01189 695 697.

On Sunday 29 April Chesham and District Amateur Radio Society is running its Advanced Licence Course at The White Hall Community Centre. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

NEWS FOR THE SOUTH-WEST

The GB2RS editorial team would like to apologise for missing details of events from Sunday to Tuesday last week. On Wednesday 25 April South Bristol Amateur Radio Club is on the air. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 25 April Taunton and District Amateur Radio Club is operating the club station. Contact William, G3WNI, on 01823 666 234, or by email to g3wni@btinternet.com.

On Wednesday 25 April Thornbury and South Gloucestershire Amateur Radio Club is on the air. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Friday 27 April Guernsey Amateur Radio Society is having a talk on wire antenna design. Contact Phil, GU0SUP.

On Friday 27 April Jersey Amateur Radio Society is having a build a dipole evening. Contact Phil, MJ0JER, by email to gj3dvc@gj3dvc.org.je.

On Saturday 28 April Cornish Radio Amateur Club is celebrating International Marconi Day. Contact Ian, 01872 561 058.

On Saturday 28 April Flight Refuelling Amateur Radio Society is running its Foundation training. Contact Tony, G3PFM, on 01202 622 262.

On Saturday 28 April Poldhu Amateur Radio Club will be operating GB2GM to celebrate International Marconi Day. Contact Keith, G0WYS, on 01326 574 441.

On Sunday 29 April Bailiwick Of Guernsey Raynet Group will take part in the RAYNET Zone 7 Exercise ICE 4. The Control station will be setting up at Beau Sejour from about 9.30am local time and visitors are most welcome. Contact Mike, GU3WHN.

NEWS FOR THE MIDLANDS

The GB2RS editorial team would like to apologise for missing details of events from Sunday to Tuesday last week. On Monday 23 April Gloucester Amateur Radio and Electronics Society is operating HF. Contact Anne, 2E1GKY, on 01452 548478, daytime.

On Monday 23 April Stourbridge and District Amateur Radio Society is having an open shack night. Contact John, M1EJG, on 01562 700 513.

On Tuesday 24 April Derby and District Amateur Radio Society is on the air. Contact Martin, G3SZJ, on 01332 556 875.

On Tuesday 24 April Loughborough and District Amateur Radio Club is on the air. Contact Chris, G1ETZ, on 01509 504 319.

On Tuesday 24 April Mid-Warwickshire Amateur Radio Society is having a direction finding simulation by John, M0JDB. Contact Bernard, M1AUK, on 01926 420 913.

On Tuesday 24 April Worcester Radio Amateurs Association is having its AGM. Request details by email to info@wraa.co.uk.

On Wednesday 25 April Telford and District Amateur Radio Society is having a curry and rice social evening. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Thursday 26 April Stafford and District Amateur Radio Society is having a hints and kinks evening. Contact Graeme, G4NVH, on 01785 604 534, or by email to graeme.boull@ntlworld.com.

On Friday 27 April Coventry Amateur Radio Society is having an introduction to the society's project . Contact John, G8SEQ, on 02476 273 190, or by email to johng8seq@ntlworld.com.

On Friday 27 April Hucknall Rolls-Royce Amateur Radio Club is having a quiz night. Contact Carl, M0XBE, on 07979 092 447, or on the web at www.hrrarc.com.

On Sunday 29 April Aldridge and Barr Beacon Amateur Radio Club is having a surplus radio and electrical goods sale at the Aldridge Central Hall. Contact Charles, 01922 636 162.

NEWS FOR THE NORTH OF ENGLAND The GB2RS editorial team would like to apologise for missing details of events from Sunday to Tuesday last week. On Sunday 22 April Great Lumley Amateur Radio and Electronics Society is running its Foundation course. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Monday 23 April Thornton Cleveleys Amateur Radio Society is having an auction. Contact Jack, G4BFH, by email to jack.duddington@btinternet.com.

On Tuesday 24 April Chester and District Radio Society I having a talk on medical electronics and engineering by Dr Tony Fisher, the head of electronics and computers at the University of Liverpool. Details on the web at www.chesterdars.org.uk, or by email from info@chesterdars.org.uk.

On Tuesday 24 April Halifax and District Amateur Radio Society is on the air with G2UG at Rishworth. Contact Brenda, 2E0YKS, by email to wrenuk10@yahoo.com.

On Tuesday 24 April Wakefield and District Amateur Radio Society is having its AGM. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk.

On Tuesday 24 April Warrington Amateur Radio Club is having a talk on 60 years of Warrington Amateur Radio Club by Mike, M0AWD. Contact Paul, 01925 268 096, or by email to paulg7odj@btinternet.com.

On Wednesday 25 April Great Lumley Amateur Radio and Electronics Society is on the air. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Wednesday 25 April Hornsea Amateur Radio Club is having a DF Night, fox hunting with G4YTV. Contact Steve, G4GPY, on 01482 860 440, or by email to g4gpy@eddiesplace.karoo.co.uk.

On Wednesday 25 April Mid-Cheshire Amateur Radio Society is radio active planning. Contact Richard, G0JIT, by email to rsa@zetnet.co.uk.

On Wednesday 25 April Wirral and District Amateur Radio Club is having an HF technical night with Neil, G4OAR. Contact Tom, G4BKF, on 07050 291 850.

On Thursday 26 April Eden Valley Radio Society is having its first meeting at its new venue, Penrith Royal British Legion Club, at the bottom of Brunswick Road. Details on the web at www.qsl.net/m5txj/evrs.htm.

On Thursday 26 April North Wakefield Radio Club is having a talk on the work of Raynet by Gerald, G3SDY. Contact Nigel, 0113 253 0558.

On Friday 27 April South Manchester Radio and Computer Club is celebrating Samuel Morse's 216th birthday with G3SVW. Contact Ron, on 0161 969 3999.

On Friday 27 April Tynemouth Radio Club is having its AGM. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

On Saturday 28 April Sands Amateur Radio Contest Group is operating GB2AOS at Sunderland Point in celebration the 200th anniversary of the Abolition of Slavery. A special QSL card is being made for the event which will be available to all contacts and Shortwave Listeners. Contact Kev, by email to g6fke@gb7mbc.net.

On Sunday 29 April Great Lumley Amateur Radio And Electronics Society is running its Foundation course. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Sunday 29 April Mid-Cheshire Amateur Radio Society is running Radio Active 2007 and all members are required to help out. Contact Richard, G0JIT, by email to rsa@zetnet.co.uk.

NEWS FOR SCOTLAND The GB2RS editorial team would like to apologise for missing details of events from Sunday to Tuesday last week. On Sunday 22 April Central Scotland FM Group is having its AGM in Bathgate Guide

Hall, Mid Street, Bathgate, West Lothian. Details on the web at www.csfmg.com.

On Sunday 22 April West Of Scotland Amateur Radio Society is having a talk and demo on electronic mapping techniques for SOTA by Jack, GM4COX. Details on the web at www.wosars.org.

On Monday 23 April Dundee Amateur Radio Club is having a club night. Contact Martin, MM0DUN. On Monday 23 April Lothians Radio Society President is having a talk by RSGB President Angus Annan on Captain Kurt Carlsen, W2ZXM, and the sinking of the Flying Enterprise. After lecture he will field a question and answer session on the RSGB and the way ahead. Contact Toby, MM0TSS, on 07739 742 367, or by email to enquiries@lothiansradiosociety.com, or on the web at www.lothiansradiosociety.com.

On Thursday 26 April Aberdeen Amateur Radio Society is having an equipment check and on the air evening. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

NEWS FOR WALES

No news items have been received for Wales this week. NEWS FOR NORTHERN IRELAND

No news items have been received for Northern Ireland this week. And that's the end of this week's GB2RS news broadcast,

prepared by the Radio Society of Great Britain.

The first place I would look is a marine supply place. If you are not
in a boating area, check:

http://www.westmarine.com
or
http://www.boatersworld.com

and many others.

Also check an electrical supply house or graybar: http://www.graybar.com

660. Are we the last generation of hams?

Newsgroup: rec.radio.amateur.moderated
Date: 2007-04-20 22:00:34 UTC
From: groupk0hb@earthlink.net
Message-ID: <1177105498.800186.298520@y80g2000hsf.googlegroups.com>
Source record: 4765

Are we in danger of being the last generation of hams? (And if we are, what can we do to eliminate that danger?)

First, a disclaimer. I'm into my fifth decade of being a licensed amateur, and figure I'm good for 3 or 4 more sunspot cycles of fun. I love amateur radio.

But I worry sometimes.

Our service will only continue to exist so long as the majority of the worlds national governments believe that we bring value to the public in exchange for the incredibly valuable RF spectrum that is entrusted to our use.

I think if the members of ITU collectively asked "Are the hams of the world doing anything which justifies their generous chunks assigned spectrum?" the honest answer would be "Probably not."

What are we going to do about that?

73, de Hans, K0HB

>
> I think you two are both correct. 8^)

Regardless of the question marks added into my quotation (which I never wrote with leading question marks), I will cite two references which are obtainable:

1. Thomas H. White's early radio history web pages which include many references and references with direct links. [try Searching since Mr. White's website has had different names although his content remains intact and expanded]

2. Hugh G. J. Aitken, "The Continuous Wave, Technology and American Radio, 1900-1932," 1985, Princeton University Press. My soft-cover copy is courtesy of Al Walston, W6MJN. In particular Chapter 5. [University libraries might have this]

There is a lesser-known, harder-to-find overall history of electronics (includes radio) published by McGraw-Hill's bi-weekly subscription periodical Electronics, 17 April 1980, a commemorative Fiftieth Anniversary edition (over 900 pp) which takes an all-inclusive overview of all electronics from before the first demonstration of radio in 1896 up to 1980.

From those three I've come to the conclusion that the forcing of radio amateurs in the USA to "below 200 meters" (above 1.5 MHz) was purely and simply politics of the day. It should be no surprise to know that radio use insofar as frequencies was little more than chaotic before 1920, little more than that during the entirety of the 1920s decade. Broadcasters wanted what we now know as the "AM broadcast band" for their exclusive use. Actually, that was a legitimate desire since broadcasters would serve millions of citizens, not just a few thousands of radio amateurs at the time.

Politics of the times did not stop with broadcasters versus amateurs. For almost two decades the United States Navy

wanted to have regulatory control over all radio use! Marconi desired a monopoly on worldwide radio use, including inroads to control of all United States radio production and services. The latter led a circuitous route to the establishment of the Radio Corporation of America, originally as a sort of "patent controller" or "quasi-repository" about radio in the USA. It was a chaotic decade those 1920s, including many patent fights in courts, and not much standardization in theory, components, use, or services to citizens. See the proposal of President Franklin Roosevelt to Congress to establish the Federal Communications Commission to consolidate radio and telegram regulations of 1933 and 1934, found on the FCC website.

>It looks like a difference of
>basic versus applied knowledge. That the shortwaves and much much higher
>frequencies were known is not in doubt. Scientists were doing research
>in GHz range frequencies surprisingly early on.

Heinrich Hertz did his basic research on radio waves using what now appears to be VHF and UHF. He had no equipment to measure such frequencies to any great precision. Lee de Forest did some early work on transmission lines in an attempt to get "a handle on" the behavior of higher radio waves on them. James Clerk Maxwell postulated some physical laws and equations which are applicable to all radio frequencies today, but he had almost NO "test equipment" other than very simple experimental kluges and brilliantly-applied logic to his "Laws."

The first radar experiments and first working radars worked on VHF-UHF. It took a coordinated, consolidated group, forced by needs of winning WWII at the "Radiation Laboratory" to really get into the GHz frequency region.

> Amateurs were forced to use frequencies that unknown to them or the
>best minds of the time (could be both at once) discovered a lot of
>unexpected characteristics of those higher frequencies.

As I originally wrote, it was fortuitous for radio amateurs to be forced upward in frequency beyond 1.5 MHz. Those documented demonstrations "got the ball rolling" for academicians and researchers to study the ionosphere in detail. With scientific proof, the commercial and government users took to HF in great numbers by the 1930s.

> I think that we'll find that time and again, restrictions lead to
>innovation.

That's too broad a statement. Innovation and invention comes from those individuals who dare to "push the [performance] envelope" of most anything. The Wright Brothers weren't exactly "restricted" in anything but laws of physics concerning aerodynamics...so they built their own "wind tunnel" and got

basic information for themselves. But, could anyone have thought ahead 50 years past their first heavier-than-air flight in a wood-wire-fabric biplane, to trans-sonic speed metal aircraft carrying more than two people?

In comparing "radio sets" of various times, examine the size, weight, function, and features of today's amateur radio transceivers with those of 1957. Or antennas, or test equipment for measuring both. The advancement on both technology and use is hand-in-hand and driven by market forces more than anything. It is all interconnected and one innovation can lead to others. James Burke's "Connections" PBS-TV series is an excellent showing of the interconnection of innovation and invention that can lead to surprising improvement in improbably-related activies.

>> If the effectiveness of shortwave radio was known by nonamateurs,
>> why didn't they use it until after amateurs pointed the way and proved
>> it by their pioneering success?
>
> A combination of ignorance (thinking that the higher frequencies were
>of no use) and simply "betting on the wrong horse". is the answer AFAIAC.

The following is a quote from "Single Sideband, Principles and Circuits" by Pappenfus, Bruene, Shoenike (Collins Radio), McGraw-Hill 1964, paragraph 1-4, page 10:

"Since 1923 when the first r-f transatlantic SSB link was established to England, there has been widespread use of pilot-carrier and suppressed-carrier SSB by communications companies. The severe static that prevailed at low frequency limited the usefulness of the early radio links; but until the installation of a v-f cable, no other communication circuit to Europe approached the day-to-day reliability of the 55-kc ground-wave signal. The frequency range below 500 kc because of its freedom from propagation variation and signal "blackout," has a consistency of received signal desireable in maintaining telephone communication. However a number of disadvantages are present that offset the signal reliability of the l-f range. Disadvantage include high power, and need for large, expensive antennas. The problems of vlf communications links and l-f bands forced the expansion into and the development of radio-communication links in the so-called short-wave bands above the [AM] broadcast band."

Page 234 of the "Collins SSB Book" state that one of the first applications of SSB to the HF bands was by the Netherlands Telegraph Administration in 1934. This was the Netherlands to the Netherlands Antilles (off the coast of South America). [diagram of receiver on page 235]

Note: Commercial and government SSB is basically on the USA telephony model C "carrier" frequency-multiplexed four-voice-bandwidth system using 12 KHz bandspace. Single-channel, 3 KHz bandspace SSB did not see great numbers until the USAF SAC requirements were made after WWII's end. "Pilot carrier" is in reference to a between channel tone frequency deliberately sent as an early AFC.

Commercial and government communications users generally plan for long service life, such service having reliability and with known characteristics. While those may appear conservative, those major players in communications aren't in there for fun or experimentation. They are there for the "long haul," both in distance and in time. Such long-lived expectancy must be based on known information supporting its development.

> The Amateurs were confined to that area, and the experimentally
>inclined did their experiments, and viola, a lot of discoveries and
>advancements were made. It is a great story, and Hams should be proud of
>that part of their history.

It is fine to be proud. However, history is the past.

> As a more mature technology today, I wouldn't expect many more earth
>shaking discoveries from Hams.

I disagree. The state of the art of all communications is continually advancing. Radio development didn't stop prior to WWII nor at any time up to now. For example, look at PSK31 by G3PLX, D-Star by the JARL with support of Japanese industry, APRS utilizing GPS downlink, all examples of post-1980 innovation in amateur radio, done by radio amateurs for radio amateurs.

The first reference I have to "repeaters" in radio (other than specific radio relay sets) is in the TM for the military AN/PRC-6 HT (includes a special cable set for that purpose) printed about 1952. The U.S. military has not used "repeatering" of that kind afterwards but look at the large installation of ham repeaters in the USA of today! Adoption and innovation of existing schemes and technology in other radio services is no crime nor moral flaw. I think that should be rewarded and praised equally well; some of those adoptions/innovations are more complex and intellectual (at least to me) than most of the early radio "pioneering" of pre-WWII times.

With today's evidence of explosive growth in all electronics there is a blurring between "who uses what in where" as to both technology and use of radio. Both seem to circulate in most radio services without regard to who was "first" but rather can "I" [in a radio service] use it? Better yet, can

"I" adapt it for "my" radio service? Maybe, maybe not. It might be worth a try. Falling back on "tried-and-true" methods and holding fast to those seems counterproductive...

73, Len AF6AY

I would have extended that time frame into the 1960's or even the
1970's when moonbounce experiments still made the news.

Your point is not clear. Are you claiming that since those
technologies originated with other radio services that the
contribution by hams was small or are you claiming that since hams
developed and popularized those technologies that hams' contribution
was large?

If you look at the foundational documents of ham radio (FCC Part
97, current test question pools), it is made quite clear that ham
radio exists for the primary purpose of having trained radio
operators available in case of emergency. Contributing to the
advancement of the radio art comes next. Having an enjoyable hobby is
not even mentioned.

Nevertheless, they have 'outsourced' most of the administrative overhead of ham radio to the ARRL. If you want to talk about the political aspects of the subject, I recently wondered, after looking at some VE testing schedules, what the presidential candidates would say about a situation where the work of a federal agency is performed by a group of volunteers who work out of church basements. The separation of church and state issue alone would provide a basis for a great deal of debate.

Your comments don't follow from mine. I stated that the FCC, in effect, 'overruled' the ARRL and the old hams when it eliminated the code test. The key question is 'WHY did the FCC do that.' I am convinced that the FCC perceived the code requirement as being at the root of ham radio's failure to innovate or provide training to subsequent generations. The FCC killed it in order to end ham radio's decades-long stagnation.

That might have been true before 2000, but isn't true today. Some spectrum would be lost to services who are interested in VHF/UHF and above. But, noone wants HF any more, as is self evident by the lack of traffic across HF outside the ham bands. Even the broadcasters, like BBC of all entities, have reduced transmissions drastically across HF and migrated to internet servers. Check out http://www.bbc.co.uk/radio. You can listen to ALL the BBC radio stations from that webpage, live! The internet is really cheap to broadcast to...much cheaper than that monster out in the country with the big Sterba curtains. VOA is dead...RAI is dead...Radio Switzerland is dead. (http://www.eviva.ch/ if you like Swiss accordian music...(c;) Even local Swiss stations, like Radio Berner Oberland (http://www.beo.ch) in Interlaken, Bernese Oberland on beautiful Lake of Thun broadcasts 24/7 to the world.

What amuses me is ARRL and the other lobbies haven't just been inundating ITU for the unused parts of HF. They can alwasy steal them back for WW3, if it lasts over 5 days...which I doubt.

Keep a sharp eye out on newsgroup alt.binaries.e-book.technical for these
kinds of books, mostly in pdf format. It is an amazing source of ebooks
on all kinds of neat subjects.

(PS - Best not read the nuclear stuff and reports posted there if you're
"in range". I didn't know there were so MANY Little Chernobyls!)

Larry

Thanks for the info, Henry. There's an issue with the rules of this
forum with buying/selling stuff, so I just wanted to make it clear
that I was looking for the source for a part, not trying to start a
swapshop of some sort on this forum.

Thanks,
Dave Wb4IUY

==>ARRL AIDING EFFORT TO MITIGATE REPEATER INTERFERENCE TO MILITARY RADARS

The ARRL has been working with the US Department of Defense to develop a
plan to mitigate alleged interference from 70 cm ham radio repeaters to
military radar systems on both coasts. Amateur Radio is secondary to
government users from 420 to 450 MHz and must not interfere with primary
users. Citing an increasing number of interference complaints, the US Air
Force has asked the FCC to order dozens of repeater systems to either
mitigate interference to the "PAVE PAWS" radars or shut down. The Commission
has not yet responded. The situation affects 15 repeaters in the vicinity of
Otis Air Force Base on Cape Cod, Massachusetts, and more than 100 repeaters
within some 140 miles of Beale Air Force Base near Sacramento, California.
ARRL Regulatory Information Specialist Dan Henderson, N1ND, stresses that
the Defense Department acknowledges Amateur Radio's value in disasters and
```

emergencies and is being extremely cooperative ï¿½ and a wholesale shutdown of US 70 cm Amateur Radio activity is not in the offing.

"The ARRL Lab is working up calculations on each repeater system the Air Force has identified to determine where interference-mitigation techniques offer a reasonable chance of keeping the repeater on the air," Henderson says. "In order for the amateur community as a whole to succeed in this venture, it is going to require the cooperation of all affected repeater owners."

A US Air Force contractor identified the problematic repeater systems last summer, but the situation didn't become critical until the Air Force contacted the FCC a month ago. ARRL officials met with Defense Department representatives in late March to discuss alleged interference to the PAVE PAWS radar sites. This week Henderson contacted Amateur Radio frequency coordinating organizations in both affected areas ï¿½ the Northern Amateur Relay Council of California (NARCC) and the New England Spectrum Management Council (NESMC).

PAVE PAWS is a missile and satellite detection and tracking system, and its name is a half-acronym. "PAVE" is simply an Air Force program name. "PAWS" stands for "Phased Array Warning System." Although PAVE PAWS has been in existence since the late 1970s, the Cape Cod and Sacramento sites are the only remaining operational facilities in the US.

PAVE PAWS facilities occupy essentially the entire 70 cm band -- one factor that makes mitigation difficult. Feeding upward of 1800 active antenna elements, the broadband radar transmitters emit an average power output of more than 145 kW.

As a "first step" to mitigate the interference, the ARRL is recommending that all affected repeater owners reduce power -- possibly to as little as 5 W effective radiated power (ERP). "We understand the difficulty this may cause to owners and users," Henderson said, "but the alternative to operating with a smaller coverage area may be not operating at all." Amateur Radio stations already must abide by a maximum 50 W PEP power limitation in the areas around both Air Force facilities.

Henderson says the League is still seeking further information on the problem. "Until the Defense Department accepts a mitigation plan, repeater owners should exercise patience," he cautioned. "Once the ARRL Lab has completed its propagation calculations, we will be in a better position to provide advice for specific repeaters on a case-by-case basis."

Contact Dan Henderson, N1ND <n1nd@arrl.org> or 860-594-0236, with specific questions or issues associated with this situation.

==>FCC POISED TO CUT VANITY CALL SIGN FEE BY MORE THAN 40 PERCENT

The FCC has proposed reducing the regulatory fee to obtain or retain an Amateur Radio vanity call sign by more than 40 percent starting later this year. In a Notice of Proposed Rule Making (NPRM), "Assessment and Collection of Regulatory Fees for Fiscal Year 2007" in MD Docket 07-81 released April

18, the Commission is proposing to cut the fee from its current $20.80 to $11.70. If ultimately adopted, that would mark the lowest fee in the history of the current vanity call sign program. The FCC proposed to collect nearly $290.3 million in FY 2007 regulatory fees.

"These fees are mandated by Congress and are collected to recover the regulatory costs associated with the Commission's enforcement, policy and rulemaking, user information, and international activities," the FCC said. "Consistent with our established practice, we intend to collect these regulatory fees in the August-September 2007 time frame in order to collect the required amount by the end of the fiscal year." Comments on MD Docket 07-81 are due May 3. Reply comments are due May 11.

The vanity call sign fee has fluctuated over the 11 years of the current vanity call sign program -- from a low of $12 to a high of $50. The FCC says it anticipates some 14,700 Amateur Radio vanity call sign "payment units" or applications during the next fiscal year.

The vanity call sign regulatory fee is payable not only when applying for a new vanity call sign but upon renewing a vanity call sign for a new term. The first vanity call sign licenses issued under the current Amateur Radio vanity call sign program that began in 1996 came up for renewal last year.

Those holding vanity call signs issued prior to 1996 are exempt from having to pay the vanity call sign regulatory fee at renewal, however. That's because Congress did not authorize the FCC to collect regulatory fees until 1993. Such "heritage" vanity call sign holders do not appear as vanity licensees in the FCC Amateur Radio database.

Amateur Radio licensees may file for renewal only within 90 days of their license expiration date. The ARRL VEC will process license renewals for vanity call sign holders for a modest fee. The service is available to ARRL members and nonmembers, although League members pay less. Routine, non-vanity renewals continue to be free for ARRL members. Trustees of club stations with vanity call signs may renew either via the ULS or through a Club Station Call Sign Administrator, such as ARRL VEC.

League members should visit the "ARRL Member Instructions for License Renewals or Changes" page <http://www.arrl.org/fcc/memberlicenseinstructions.html>, while the "Instructions for License Renewals or Changes" page <http://www.arrl.org/fcc/licenseinstructions.html> covers general renewal procedures for nonmembers. There's additional information on the ARRL VEC's "FCC License Renewals and ARRL License Expiration Notices" page <http://www.arrl.org/arrlvec/renewals.html>.

License application and renewal information and links to the required forms are available on the ARRL Amateur Application Filing FAQ Web page <http://www.arrl.org/FandES/field/regulations/application-filing-faq.html>. The FCC's forms page <http://www.fcc.gov/formpage.html> also offers the required forms.

==>NORTHEAST AMATEUR RADIO VOLUNTEERS AID MASSIVE STORM RESPONSE, RECOVERY

Amateur Radio volunteers have been helping the US Northeast to recover from the effects of a huge and punishing nor'easter that generated high winds and caused extensive flooding in many communities -- rural, urban and coastal. While sunny weather has returned to the region, some ARES volunteers remain active.

"This was a long-duration event that impacted the region for several days," said ARRL Eastern Massachusetts Section Emergency Coordinator Rob Macedo, KD1CY, who's also ARES SKYWARN coordinator for the Taunton National Weather Service office.

New Hampshire Amateur Radio Emergency Service (ARES) and Eastern Rockingham County ARES have been backing up landline telephone service, including 911, between Nottingham and the New Hampshire Bureau of Emergency Management. Service was knocked out by flooding at a switching station. Operations could last for several days. Even cell service is affected.

The mountains of northern New England received snow, some of which melted, while most of the rest of the region saw heavy rainfall -- three to six inches on the average with isolated higher amounts in southern and central New England. The result was significant flooding of rivers, streams and urban areas, coupled with mudslides and bridge and road washouts.

Amateur Radio ARES, RACES, SKYWARN and Military Affiliate Radio System (MARS) volunteers monitored river levels for authorities. The Nashua, Farmington, Connecticut, Blackstone, Pawtuxet, Piscataquog, Shawsheen, Souhegan and Merrimack rivers were among those overspilling their banks. Homes and businesses had to be evacuated in some communities. Flooding of smaller rivers and streams added to the problem. Along the coast, Amateur Radio volunteers reported widespread minor to moderate flooding across coastal eastern Massachusetts Sunday through Wednesday.

In Nantucket, the ocean claimed one home during high tide, while numerous cars got stuck in coastal flooding, and motorists had to be rescued. A few families had to evacuate during high water.

Winds gusting between 60 and 75 MPH brought down trees and power lines, leaving some 45,000 customers without power in Massachusetts alone. Trees and tree limbs also fell on cars and houses, in some instances causing significant damage.

Macedo reports SKYWARN operations at the Taunton NWS office's WX1BOX, were active for 40 hours straight -- from 8 AM Sunday through midnight Tuesday. SKYWARN provided some 500 to 600 reports of snowfall, rainfall, flooding, wind damage and wind-speed measurements. More than a dozen repeaters served formal and informal SKYWARN gatherings.

At the Massachusetts State EOC, RACES' WC1MA was active from 6 PM Sunday through 7 PM Monday, monitoring not only the storm but the Boston Marathon. The race went on despite the rough weather. Conditions improved by afternoon. More than 200 Amateur Radio volunteers deployed for the Boston Marathon while operations for the nor'easter were under way. Eastern Massachusetts ARES went on standby to support storm operations.

"This was a test of our ability to have a large amount of resources deployed for the large storm as well as for a large event, and things went very well." Macedo said.

Western Massachusetts SEC John Ruggiero, N2YHK, reported some localized ARES activity as a result of the nor'easter. Mutual-aid ARES teams in Western Mass were on alert but not activated.

Shelters opened in Greenfield and Leominster to house flood victims, and ham radio volunteers were on hand to support communication. The Greenfield EOC was open for a time. In Northampton flooding caused some apartment dwellers to evacuate. Some roadways throughout the region were washed out or flooded over.

In Connecticut, ARES went on alert to support the American Red Cross and the Department of Emergency Services and Homeland Security. A SKYWARN net fired up to gather reports of flooding, high water levels, power outages and rainfall totals, reported Hartford-Tolland Counties SKYWARN Coordinator Roger Jeanfaivre, K1PAI.

Connecticut SEC Brian Fernandez, K1BRF, said ARES volunteers staffed emergency management facilities in two of the state's five regions, "largely along the shoreline where there has been flooding in low-lying areas." Some evacuations occurred. ARES volunteers also staffed selected EOCs and, briefly, shelters in affected areas. The Connecticut River reportedly crested on Wednesday.

In Northern New Jersey, DEC George Sabbi, KC2GLG, in Bergen County reports that Bergen Amateur Radio Association volunteers supported communication for a Red Cross shelter in Lodi, which housed some five dozen clients. At one point, the shelter lost its telephone service and power was out. Radio amateurs on site used handhelds to facilitate communication until backup power arrived. SKYWARN volunteers also provided weather observations, as more than seven inches of rain caused the closing of many roads throughout the county.

New York City-Long Island SEC Mike Lisenco, N2YBB, said all ARES members through the section were put on standby Saturday in anticipation of the storm, due to hit around midnight. In New York City, the Red Cross called upon DEC John Healy, KA2ABV, to staff up to nine shelters. The Salvation Army also asked ARES to remain ready. A staff of 30 ARES volunteers was assembled for the first 24-hour period, "with more to come if needed," Healy said.

More than eight inches of rain caused scattered flooding in New York City, but predicted 50 MPH winds never materialized. The danger was over by the next day, and New York City District ARES was able to stand down and secure. ARES teams on Long Island also were prepared in advance on April 14. Most of Long Island was spared the brunt of the storm, however.

==>RED CROSS, ARRL DISCUSS BACKGROUND INVESTIGATIONS

Amateur Radio Emergency Service (ARES) members volunteering to support Red Cross disaster relief or recovery operations would not have to submit to a

Red Cross background check unless their volunteer stints extended beyond seven days. That was the word from American Red Cross officials, who met recently with ARRL representatives. The ARRL has expressed concerns about the Red Cross's background check policy since first learning of it last year. The League posted its most recent position statement <http://www.arrl.org/announce/ARRL-ARC-bg-check.html> on the topic in March.

ARRL General Counsel Chris Imlay, W3KD, and Chief Technology Officer Paul Rinaldo, W4RI, met March 20 at American Red Cross offices in Washington, DC, with two attorneys from the Red Cross General Counsel's office and two management-level staff members from Red Cross Disaster Services. ARRL asked the Red Cross staff if ARRL ARES volunteers would be subject to the American Red Cross background check requirement if they provided communication for more than seven days. The position of the Red Cross is that ARES volunteers would not be permitted to provide communications at an American Red Cross disaster site for more than seven days without submitting to the Red Cross background check procedure.

Discussion then turned to the Red Cross's announcement that it would not conduct credit or mode-of-living checks. The League's stated concern has been that the ARC background investigation consent form states that a consumer report and/or an investigative consumer report -- which includes certain credit checks and mode of living checks -- will be obtained on the volunteer signing the form.

The ARRL team asked if the Red Cross would be willing to modify its consent form to limit the authority granted by the person signing the form to criminal background checks only. The Red Cross representatives did not appear willing to modify the current consent form, however.

The ARRL also suggested alternatives to the Red Cross investigation firm, MyBackgroundCheck.com (MBC).

The Red Cross also appears unwilling to accept background checks conducted by other entities, such as law enforcement organizations. The Red Cross based its reluctance on a requirement to compare the methodologies of MBC with those of alternative background-check providers.

Following the meeting, the ARRL reiterated its recommendation that members carefully review any consent document permitting a private organization to conduct a background investigation on that individual. The current Red Cross background check consent form continues to include permission, without further consent from the volunteer, to conduct a consumer report and/or an investigative consumer report.

The Federal Trade Commission and federal statutes define "investigative consumer reports" to include a mode-of-living check as well as certain credit checks.

While the Red Cross has said it won't routinely pull credit reports on background check applicants, ARRL President Joel Harrison, W5ZN, has said that just requiring volunteers to authorize procurement of a credit report "is inconsistent with this assurance."

In the course of the background check application process, prospective volunteers must agree to let MBC obtain a wide range of personal information bearing not just on criminal background and creditworthiness but, MBC says, "character, general reputation [and] personal characteristics." MBC advises, "The nature and scope of this disclosure and authorization is all-encompassing."

The ARRL says it won't suggest which organizations or agencies Amateur Radio volunteers should or should not support, but the League stresses that it does wish to facilitate the provision of volunteer services.

The ARC and the ARRL have a Statement of Understanding (SoU), which is up for review this year.

==>HAM RADIO LETS ISS CREW MEMBERS CONNECT WITH SCHOOLS AROUND THE WORLD

The Amateur Radio on the International Space Station (ARISS) program is having a very busy and successful April. So far this month, Amateur Radio has made it possible for youngsters at nine schools in the US, the Netherlands, Australia, Hungary and Russia to speak with the astronauts and cosmonauts aboard the ISS as well as with a civilian guest. On April 12 alone, students at three schools got the chance to talk with those aboard the ISS. Two ARISS school contacts April 17 brought the total to 286 since the first ISS crew came aboard in November 2000. ARISS International Secretary Rosalie White, K1STO, notes that civilian space traveler Charles Simonyi, KE7KDP/HA5SIK, has been spending some of his precious time in space on the air.

"Charles Simonyi is making hams happy by getting on the air at various times from the ISS," she said. "Over his homeland of Hungary, he made QSOs with over 20 ham stations using his Hungarian call sign." Simonyi, who paid the Russian space agency some $25 million for his 10-day space adventure, handled four ARISS school contacts during his stay. He'll return to Earth at week's end. Still ahead in April are ARISS school contacts in Italy, Germany, Illinois and Virginia.

The space station's orbital pattern this month enabled ARISS Earth stations in Australia to serve as a conduit for four of the question-and-answer sessions with ISS crew members, including direct contacts with two schools down under. Verizon Conferencing provided two-way teleconferencing links between the stations and the schools for five so-called "telebridge" contacts.

On April 2, youngsters at St Michaels Primary School in New South Wales, Australia, had 17 questions asked and answered by Expedition 14 Commander Mike Lopez-Alegria, KE5GTK, as some 240 people looked on. The event also attracted a TV crew and reporters from two regional newspapers.

Expedition 14/15 astronaut Suni Williams, KD5PLB, told youngsters at Glenden State School in Queensland, Australia, April 4 that human habitation of the ISS is part of a larger effort to understand what happens to the human body in long-term space flight.

"You guys will be the ones who will be venturing off to other planets," she told the students. She noted that ham radio is "always a fallback plan" if other communication systems go down. The contact culminated some nine months of planning at the school.

On April 10, Lopez-Alegria took the helm at NA1SS to answer questions for youngsters at Delta Researchers School, a human spaceflight project for primary schools in the Netherlands, aimed at using human spaceflight as a theme to integrate science and technology into the curriculum.

ARISS was even able this month to put the space program within the reach of 22 youngsters attending the tiny, remote Salt Creek Primary School in South Australia. Williams answered more than a dozen youngsters' questions on April 12. One wanted to know if she'd ever seen a "black hole" in space.

"Thank God we haven't," Williams quipped. "I don't thing we'd see it for very long at all."

On April 16, Patriots Day in her native Massachusetts, Williams became the first human to run the 26-mile Boston Marathon in space. She finished the race on a specially designed treadmill in 4 hours, 23 minutes, 10 seconds.

Simonyi handled the other two April 12 contacts, speaking with students at Fairborn High School in Ohio and at Puskï¿½s Tivadar Tï¿½vkï¿½zlï¿½si Technikum in Budapest, Hungary. "Fantastic PR both for Charles and for ham radio!" Chris Hildebrand, HG5XA, reported afterward. "I could not meet anyone today who had not heard of Charles and Amateur Radio."

Following the contact, Fairborn teacher Barb Skusa commented on the level of excitement at the school. "It was truly a thrill to be part of this once-in-a-lifetime opportunity," she told ARISS Mentor Charlie Sufana, AJ9N. "I actually had tears in my eyes."

On April 16 Simonyi spoke via ham radio with students at Redmond High School in Redmond, Washington, the home of Microsoft where he once developed software.

"I think that space is one of the best things that humanity does," he told the high schoolers. "And to participate in it -- just even in a very small way -- I think it's a privilege, and getting young people like you involved in science, that's just a bonus."

The following day, a youngster at Cedar Point Elementary School in Bristow, Virginia, quizzed Simonyi about his job assignment in space. "Well, I'm a tourist, actually, so I don't need to have a job," Simonyi responded, "but I signed up for a number of interesting science experiments to help. For example, measuring the radiation in space."

Also on April 17, Expedition 15 Commander Fyodor Yurchikhin, RN3FI, spoke in Russian with students attending Kursk State Technical University in Russia. Yurchikhin formally assumed command of the ISS that same day. The ISS occupants have managed to work around a busy schedule of crew handover activities to accommodate the ARISS school contacts. Simonyi will accompany Expedition 14's Lopez-Alegria and Russian cosmonaut Mikhail Tyurin, RZ3FT,

when they return to Earth April 21 aboard a Soyuz transporter.

ARISS <http://www.rac.ca/ariss> is an international educational outreach, with US participation by ARRL, AMSAT and NASA.

==>DEADLINE LOOMS FOR MCGAN AWARD NOMINATIONS

The deadline is drawing near to nominate candidates for the prestigious Philip J. McGan Memorial Silver Antenna Award for excellence in Amateur Radio public relations. Throughout the year ARRL Public Information Coordinators, Public Information Officers and other public relations volunteers strive to keep Amateur Radio visible in their communities by publicizing special events, activities and accomplishments.

"Their efforts benefit us all," says ARRL Media and Public Relations Manager Allen Pitts, W1AGP. "If you know someone who has achieved public relations success on behalf of Amateur Radio, nominating him or her for the McGan award is the perfect way to say 'thank you'."

The 2007 McGan award will go to a radio amateur who's achieved demonstrable success in Amateur Radio public relations and who best exemplifies the volunteer spirit of the late Philip McGan, WA2MBQ, the first chairman of the ARRL Public Relations Committee.

The McGan Award recognizes public relations activities specifically directed at bringing Amateur Radio to the public's attention -- and most often the media's -- in a positive light. This may include preparing news releases, hosting a radio show or being an active public speaker.

If you know of a ham who has gone "above and beyond" to promote Amateur Radio to the public, consider nominating that person for the 2007 award. Nominations are due by Friday, May 25. Full information is on the ARRL Web site <http://www.arrl.org/pio/mcgan/>.

==>SOLAR UPDATE

Solar Fluxmeister Tad "The Spudman" Cook, K7RA, Boise, Idaho, reports: We are on the road in the Gem State this week -- another with few or no sunspots. Most days had zero spots, but from time to time a new sunspot will appear, but only briefly. Expect more of the same conditions, with few or no sunspots. Eventually this year we should reach a point where the only place for solar activity to go is up.

April 20, we may see unsettled geomagnetic activity. Geophysical Institute Prague expects unsettled to active geomagnetic conditions for April 20, unsettled for April 21-22, quiet to unsettled on April 23, and quiet April 24-26. The US Air Force predicts April 28 as the next date for active geomagnetic conditions, with a predicted planetary A index of 25.

Sunspot numbers for April 12 through 18 were 0, 0, 11, 0, 0, 12 and 11, with a mean of 4.9. The 10.7 cm flux was 68.3, 68.3 68.2, 69.3, 69.3, 69.2, and 68.8, with a mean of 68.8. Estimated planetary A indices were 8, 2, 4, 4, 1, 8 and 9, with a mean of 5.1. Estimated mid-latitude A indices were 7, 1, 3, 2, 0, 6 and 6, with a mean of 3.6.

For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: The TARA Skirmish Digital Prefix Contest, the Holyland DX Contest, the ES Open HF Championship, Kids Roundup, the EU Spring Sprint (SSB), the Michigan and Ontario QSO parties, the EA-QRP CW Contest, the YU DX Contest, and the SKCC Weekend Sprint are the weekend of April 21-22. The 432 MHz Spring Sprint is April 25. The NCCC Sprint Ladder is April 27. JUST AHEAD: The Florida and Nebraska QSO parties, the SP DX RTTY Contest and the Helvetia Contest are the April 28-29 weekend. See the ARRL Contest Branch page <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education course registration: Registration remains open through Sunday, May 6 , for these ARRL Certification and Continuing Education (CEC) program online courses beginning Friday, May 18: Amateur Radio Emergency Communications Level 2 (EC-002), Amateur Radio Emergency Communications Level 3 (EC-003R2), Antenna Modeling (EC-004), HF Digital Communications (EC-005), VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). These courses will also open for registration Friday, May 4, for classes beginning Friday, June 15. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the CCE Department <cce@arrl.org>.

* Swains Island N8S operation tops 100,000 contacts! The Swains Island N8S DXpedition team made 117,205 QSOs, The Daily DX reports. That's the fourth highest all-time DXpedition contact total. After shutting down April 15, the crew made it back to American Samoa late the following day. The N8S online logs are available <http://logsearch.de/index.php?option=com_wrapper&Itemid=73>, and the DXpedition is expected to upload its log data to Logbook of the World (LoTW). The first N8S QSL cards will be available in about a month. YT1AD will handle cards for N8S. -- The Daily DX

* CubeSats launch successfully! Four CubeSats containing payloads operating on Amateur Radio frequencies were among several spacecraft launched successfully April 17 at 0645 UTC from Baikonur Cosmodrome, Kazakhstan. A Dnepr rocket deployed seven CubeSats plus seven other satellites from Egypt, Saudi Arabia and Ukraine into Earth orbit, and signals from at least two of the four CubeSats have been copied on Earth. Among the spacecraft was Colombia's first satellite. The CubeSats are: CalPoly's PolySats CP3 and CP4, 436.845 MHz and 437.325 MHz respectively, 1200 bps FM AFSK, AX.25, 1 W, operating under an FCC Part-5 Experimental license; University of Louisiana CAPE-1 435.245 MHz, 9600 bps FM FSK AX.25 and CW telemetry during opposing 30-second intervals, 1 W, call sign K5USL (e-mail telemetry reports <jd.harrist@gmail.com>); Universidad Sergio Arboleda, Colombia, Libertad-1,

437.405 MHz, 1200 bps FM AFSK AX.25, 400 mW, call sign 5K3L. CP4 will transmit a "sensor snapshot" every 2 minutes on 437.325 MHz at 1200bps FSK, AX.25. FSK will require using SSB mode for reception. A 6-second CW preamble precedes this transmission. Keplerian elements for the new ham radio birds and additional information will be posted on Cal Poly's CubeSat Web page <http://www.cubesat.org/>. CalPoly offers a CubeSat "Satellite Contact Form" to report telemetry data received from any satellite <http://cubesat.atl.calpoly.edu/pages/missions/dnepr-launch-2/data-packet-form.php>. -- AMSAT

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

667. WIANEWS for week commencing April 22 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-04-21 04:04:35 UTC
From: nationalnews@wia.org.au
Message-ID: <200704210359.l3L3xFI25562@panix2.panix.com>

Cross-posted to: rec.radio.amateur.moderated,aus.radio.amateur.misc,rec.radio.info

This is WIANEWS for week commencing April 22 2007

Jeff Johnson VK4XJJ mobile (pedestrian) is walking from Port
Augusta to Karumba associated with the Deafblind Association of Australia.

His Brother, VK2FWGJ William, says he has passed Hawker, and is carrying a
Yaesu 817 voice AND CW

He would like to be contacted by "local" radio amateurs.

He listens on 7.050MHz at 5:30 EST and 7.060 MHz at 5:45 EST.

We spoke with our intrepid walker VK4XJJ....

((((((pause for audio))))))

AROUND VK in 80 Seconds with VK6FIVE.

VK1

Next Club meeting - Monday 23rd April
At the next general meeting, Keith Malcolm VK1ZKM talks ITU issues.

VK2
Westlakes will have a display stall at the Lemontree Passage Bushfire
Brigades Fete on Saturday 9th June (Queens Birthday weekend in VK2).
The club is seeking persons prepared to assist in setting up the radio
display etc.. Contact Dianne VK2FDNE.

VK3

6 METER BEACON BACK ON AIR!

The NERG 6 meter beacon on 50.295 MHz is back on air with a 10 watt
horizontally polarised omni-directional CW signal.

The VK3RMH 6&10m beacons provide signals to indicate band openings and for
testing antenna and receivers.

The 6 meter FM repeater on 53.550MHz is operational but requires additional
cavity resonators to improve coverage.

VK3RMH is located near Wattle Glen, approximately 25km North East of
Melbourne at maidenhead grid QF22OH.

Please send reports to vk3rmh nerg.asn.au

VK5

David Clegg, Secretary of the Adelaide Hills Amateur Radio Society is organising to train more assessors. If your club in VK5 has any interested people in doing this training please contact David.

At this stage he is only collecting numbers, venue and cost to be advised, however they expect the course to be held in Adelaide rather than interstate.

David Cleg

VK6

This coming Wednesday should have been the Perth YL Lunch, however, it clashes with ANZAC DAY. So the gals decided to fast forward a day to this Thursday April 26th

The venue is not changing nor the time. 12 midday at the Bayswater hotel Railway Prd, in Bayswater.

Before we leave the YLs Lunch... this month is a very special one. As a long awaited milestone has arrived. David Coouch VK6WT (who many of you will fondly remember, as I do, as our teacher in Radio Theory) is turning 90 years of age.

Never been to the Lunch... Well, make this the excuse to turn up and celebrate with David.

>From the teacher of the last generation, to the current Exam Team, & Neil VK6BDO informs me that:

The WA Amateur Exam Service exam dates this month are closing Tomorrow.

Standard & Advanced exams on, next Saturday the 28th. If you want to sit anything please contact Neil with details of which exams you need to sit by the close of work Monday. That's tomorrow! So maybe catch him, on air, after this evenings broadcast.

Foundation course for May on the 19/20 with an exam on the 26th. Well that's full, so if you want to do the foundation license in WA, get in quick, as the 21st & 22nd of July's course (with exam on the 28th of July) is already one third full.

The next VK6 Exams for Standard and Advanced, if you miss next weeks, are on June 30th. Think ahead, book early! Contact Neil VK6BDO.

Finally, WARG members, look out in your post-box... if you haven't already got your 2007 newsletter... it should arrive on Monday, Tuesday at the latest.

That's it, We're around VK, so now back to our "action central newsroom", In Perth, I'm Mark VK6FIVE.

STILL IN PERTH, AND WITH EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO HERE IS KYLEA VK6FXYL

GENERAL!

VK4 Foundation Class gets good roll up.

A Foundation instruction class was held on Saturday April 14th
in Townsville.

Six students attended with instruction provided by Gavin VK4ZZ,
catering by Rob VK4DRT and Maureen Soter and the audiovisual
equipment and radio shack supplied by Nick VK4RQA.

Most of the students are from a cruising yacht background
and some have already had WICEN experience, most
attempted an Assessment Saturday 21.

We are all looking forward to lots of new callsigns on air
in the near future !

The first of a series of SARL Radio Technology in Action days was
held at the University of KwaZulu-Natal yesterday, Saturday, 21 April.

The programme was packed with interesting presentations and demonstrations
and covered a wide spectrum of interest.

The full programme should still be available at www.sarl.org.za

The SARL RTA was an event for anyone who has an interest in technology,
subjects like "The mystery of the frog's thigh" - the story of the
invention of the battery by Tony Voorveld, to "Cognitive Radio, an
emerging technology that may make more intelligent use of the available
radio spectrum" by Dr Gert-Jan van Rooyen.

Other presentations include "Research in ionospheric radio propagation",
"VSWR - the persistent myths" and, "Why build it?".

A great initiative from the SARL.

FUTURE EXAMS

Adelaide Hills Amateur Radio Society (AHARS) is planning to run two
Foundation licence courses. These will be held at the Aviation Museum,
56 Lipson Street Port Adelaide. Two weekends have been booked, they are:
* August 4th and 5th.
* November 3rd and 4th.

The club will ask a nominal charge of $5 per person, plus costs for any
books.

Interested parties can contact the course convenor, Sasi Nayar on
0417 858 547 to reserve a place.

Help amateur radio continue to grow

Do you know someone who could be interested in joining our hobby? Then
encourage them to enrol in a Foundation Licence training course.

Next Foundation Licence course, and Standard / Advanced assessments .....

The CRARC will be undertaking another Foundation Licence course on
the weekend 19th & 20th of MAY.
Also running Standard and Advanced Licence Examinations
and Assessments on the Saturday (19th May) for those who wish to sit.

If you wish to sit either the examinations, or do the F.L. Course,
please contact Alan Hawes VK1WX via email to education@vk1.wia.ampr.org
or by phone (after hours) to 02 6258 2568. Please note that all monies
are to be paid by May 7th 2007 !

In Victoria - the Ballarat Amateur Radio Group is now taking enrolments
for its weekend training course and licence assessments on the 5th & 6th
of May.
For more information please contact Craig Cook VK3CMC phone 5342 2448 or
email vk3cmc@bigpond.com.au

VK5

Adelaide Hills Amateur Radio Society will run Foundation licence's
at the Aviation Museum, 56 Lipson Street Port Adelaide, 2 weekends
August 4th and 5th then November 3rd and 4th.
Contact the course convenor, Sasi Nayar on 0417 858 547

VK6
Re-Capping advice given earlier today by Mark, VK6FIVE:-
Foundation course for May on the 19/20 with an exam on the 26th.
So if you want to do the foundation license in WA, get in quick,
as the 21st & 22nd of July's course (with exam on the 28th
of July) is already one third full.
The next VK6 Exams for Standard and Advanced, if you miss next weeks,
are on June 30th. Think ahead, book early! Contact Neil VK6BDO.

CONGRATULATIONS - RESULTS

FOUNDATION CALLS and F TROOP NET.
Two F calls have come through in the Lismore area, Andrew VK2FAMA and
Nathan VK2FADE. Nathan has volunteered to take on as NCS of their F Troop
Net, 2000K, Wednesday nights on the Summerland 2m repeaters.

In Brissy, OzGear's first 3 courses have added another eleven FL-qualified
people to the VK4 total so far this year so getting close to 10% of VK4's
total current FL count.

>From VK1WIA this is the National News Service -
Tune in today...Focus on Tomorrow

I'M FELIX VK4FUQ AND FROM THE RSGB, AMATEUR RADIO NEWSLINE AND OUR OWN
WIA INTERNATIONAL SOURCES, WE LOOK AT THE WORLD SCENE IN AMATEUR RADIO.

Still the most popular!

Radio is still the most dominant form of communication despite major
technological advancements, according to the International Amateur Radio
Union (IARU) on Monday.

"Despite the internet and cellular phones, amateur radio continues to
attract people world-wide by providing free international communications
and friendships -- as it does not need pre-established supporting
infrastructure," said one World President of a Radio Society,
Graham Hartlett, of the South African League.

Amateur Radio Day was celebrated on Monday.

The theme for this year's celebrations:
"Amateur Radio: Allowing the youth to connect the world" was chosen because
most amateur radio programmes were geared towards educating the youth.

Amateur radio clubs had helped astronauts and crew members of the
International Space Station speak with youth around the world while in orbit
via the ARISS programme.

IARU
http://www.jarl.or.jp/iaru-r3/

Chairman of IARU Region 3- Michael Owen VK3KI says the great
challenge facing Region 3 is communicating with its
member societies, and through them, to amateurs generally.

The Directors held a meeting in early December last, at the
JARL Headquarters in Tokyo. "We did this because we were very
conscious of the need to make IARU Region 3 meaningful", said
Michael

We needed to get together, as a very new team, to identify
priorities and tasks.

We saw participation in the Asia-Pacific Telecommunity and
particularly its preparation for WRC-07 as an immediate need.

We saw better communicating what were doing as another need.

We decided to continue the production of this Region 3 Newsletter,
so ably managed by Selva 9V1UV, now the responsibility of
Gopal VU2GMN.

We saw the need to circulate very brief news releases, without
detail, just telling people the sort of things that we are doing.

VK3KI Michael Owen went on to say "Because funds of Region 3 come
from every member of every Region 3 member society, we want them
to know what we are doing.
But all of that is not much good if we don't send our circulars,
our newsletters, our releases, even our requests for information
to the right address, or if we do, we don't have any responses".

==========
NEWS FROM ARNEWSLINE

HAM RADIO IN SPACE: SPACE TOURIST ON THE AIR

It cost him an estimated 20 million dollars to get there, but Space tourist Charles Simonyi, KE7KDP, is on the air from the International Space Station Amateur Radio Newsline producer Bill Pasternak, WA6ITF, is in our Los Angeles newsroom with the audio of some of his first contacts:

Simonyi: "November Alpha One Sierra Sierra. CQ, CQ, CQ."

As we go to air space tourist Charles Simonyi, KE7KDP, has only been on the International Space Station for a few days. No matter because he seems to have really taken to the idea of talking to people back on mother Earth using Amateur Radio and does it like a pro. Take a listen:

Simonyi: "Kilo Echo 7 please repeater your callsign...Kilo Echo 7 Mike Henry George this is Charles. I hear you loud and clear. And a big 73 for you. Thanks for the contact. QRZ.

The Whiskey 6 stand-by. Whiskey 6 Mike Echo Uniform, my name is Charles and I hear you loud and clear. 73 to you. "

One of the first stations contacted by KE7KDP was Scott Avery, WA6LIE, in Salinas, California. Avery had his recorder running as KE7KDP sent a message of thank you to the ham community which worked with him to get him licensed in time for the flight:

Simonyi: "Well I just want to congratulate the (ham radio) community for the great job that they are doing in performing their charter. As we learned about it (in training) and to thank everybody who helped me to get into the community and helping me along. It is not easy for me and I do the best that I can. So, thanks a lot guys, and I hope I can talk to as many people as possible. Over."

We also got the chance to ask Avery what it was like to talk to Charles Simonyi and relay his message to the ham radio world:

Avery: "Being one of the first to talk to Charles on the International Space Station was definitely an honour and a surprise. I feel very lucky to have had this opportunity and I hope that others enjoy their contacts as much as I did. Its pretty awesome and a once in a lifetime experience."

After they chatted for about a minute, KE7KDP said 73 to Avery and went on to work station after station, almost as if he was on a DX-pedition. In some ways he was and Avery kept tape rolling until the I-S-S faded from view:

Audio of KE7KDP making rapid-fire contacts. Hear it in the MP3 version of this newscast downloadable from www.arnewsline.org

RADIO RULES: THE FCC AND 6.25 kHz NARROWBAND TECHNOLOGY

The Federal Communications Commission has declined to mandate when the Private Land Mobile Service will be directed to adopt 6.25 kHz narrowband spacing between systems, but says that it will eventually happen. And this could be as early as 2011 or 2013. And hams in need

of more repeater channels are likely watching to see how it all pans out. Amateur radio Newsline's Bruce Tennant, K6PZW, has more:

If you own an Amateur repeater on any of the bands between 2 meters and 70 centimetres, a decision by the FCC to force users in the Private Land Mobile Service to adopt 6.25 KHz inter-station spacing at some yet to be determined day could eventually impact on ham radio. This is because the operating standards used in commercial service usually work themselves down to ham radio operations over a period of time.

The FCC has made public its Third Report and Order dealing with a mandatory shift to 6.25 KHz ultra-narrowband technology.
The release says that the agency for now does not want to establish a specific fixed date for private land mobile radio systems in the 150 to 174 MHz and 421 to 512 MHz bands to transition to 6.25 kHz. That said, the FCC also says that it plans to have such a transition take place once gear is available and certified for sale. And for that reason, the FCC strongly urges land mobile licensees to consider migrating directly to 6.25 kHz rather than first adopting 12.5 kHz spacing and later making the 6.25 kHz move.

But there are a few caveats. In its announcement, the FCC admitted that 6.25 kHz technology is not mature enough to warrant setting a specific migration schedule. Also, that there are no accepted industry standards for 6.25 kHz, and this could be a problem in regard to interoperability between various users.

But says the FCC also says that it will expeditiously establish a schedule for transition to 6.25 kHz ultra-narrowband once the technology matures to the point that sufficient equipment is available for testing.

What does this mean to hams? While the FCC is not likely to tell radio amateurs that they have to adopt the same technology, it is all but inevitable that some hams will begin looking at 6.25 kHz for their own future repeater operations. This might be especially true in the crowded urban areas like the North-East and in California where waiting lines exist for new repeaters with some hams in that line for several years.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

6.25kHz narrowband will not be seen in the Private Land Mobile Radio for several years, but ham radio experimenters are likely to try it long before then.

RESCUE RADIO: REPORT SAYS CELLPHONES SAFE IN HOSPITALS

A report released has concluded that cellular telephone calls made on cell phones do not affect hospital medical devices. But the same researchers say that store anti-theft alarms might make implanted heart devices misbehave. Amateur Radio Newsline's Bill Pasternak, WA6ITF, reports:

According to the March issue of Mayo Clinic Proceedings., tests at Rochester, Minnesota hospital showed normal use of cellular telephones caused no noticeable interference with patient care equipment. What came as a surprise was a finding that a portable CD player caused an abnormal electrocardiograph reading when a patient used it near one of the leads of the device.

Most hospitals forbid the use of cell phones. Dr. David Hayes and colleagues said their tests suggest the ban is unmerited.

The researchers tested cellular phones using two different technologies from different carriers, near 192 different medical devices. During 300 tests run over five months, they reported no trouble with the equipment.

But not all communications technology mixes with medical devices. Dr. J. Rod Gimbel of East Tennessee Heart Consultants and Dr. James Cox of the University of Tennessee Medical Centre in Knoxville described two cases in which anti-theft devices apparently caused implanted heart devices to malfunction.

Dr. Gimbel says that one of the patients had a pacemaker and she collapsed after pausing in a store doorway. Another had an implantable cardiac defibrillator that shocked him after he stood near an anti-theft unit. Dr. Gimbel adds that simply moving a person with one of these implanted devices away from the anti-theft device may save their lives.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, at the studio in Los Angeles.

Regardless of what this report says, it is important to follow the rules that each individual hospital enforces and displays. And if the sign says to turn off your cellular telephone while on the premises, then its best that you do as asked. That goes for your H-T or any other two-way device as well.

==========

NEWS SOURCED TO THE RSGB NEWS SERVICE AND READ BY G4NJH

Beware bogus emails

Listeners are urged to be cautious of emails claiming to be from the "ARRL.net user support team".

The American Radio Relay League has informed GB2RS that these emails are bogus. There is no such entity as the ARRL.net user group, and the emails originate from outside the US.

The bogus emails contain wording like "We have received reports that your e-mail account has been used to send a large amount of unsolicited commercial email messages during this week" and "We recommend you to follow our instructions in order to keep your computer safe."

On no account follow the instructions in the email. Doing so will actually infect your computer with the MyDoom Trojan worm virus. Your computer will then be used to send out spam emails. Users of the ARRL's email forwarding services are thought to be at most risk of receiving the emails.

For further information, visit the ARRL's website at www.arrl.org

International Museums Weekend award

The seventh International Museums Weekend special event will take place on 16th and 17th June 2007.

Radio amateurs are encouraged to participate in this event by setting up stations in their local museums. Harry, M1BYT, who is organising the event, asks that all those intending to join in should please register their museum via the International Museums Weekend website. He also requests that they send their details to him by e-mail to harry.m1byt@tiscali.co.uk

CONTEST COLUMN - D A T E L I N E - ROB VK5MM

MAY 5 - 6

Westlakes CQ Repeater contest.

In past years this event was spread over one week. However to ensure that working amateurs are not disadvantaged this year the contest will start just past the stroke of midnight on the 4th May and continue until midnight on the 6th May.

The aim of the contest is to encourage more use of at times inactive repeaters.

Definitely a fun event and should not be missed.

2007 VK/TRANSTASMAN CONTEST

80M CW 26 May 2007
160M Phone 7 July 2007
160M CW 21 July 2007

AUGUST 11/12 Remembrance Day Contest (The RD) wia.org.au

SPECIAL EVENTS, BEACON AND NET ADVICE

Saturday, April 28 is the 20th International Marconi Day.
Several dozen stations in locations with a link to Marconi
will be operating on the day.

The Hornsby and Districts Amateur Radio Club will be operating VK2IMD, the only IMD station in Australasia. They hope to be on all HF bands.

VK2IMD commemorates Ernest Fisk receiving the first direct radio message from Britain to Australia, at Wahroonga in 1918. This message was sent from Marconi's station in Caernarfon, Wales.

For more information look for the GB4IMD website.
Link: http://www.gb4imd.org.uk/

MEDIA WATCH

HAVE YOU DONE ANYTHING TO PROMOTE AMATEUR RADIO THIS WEEK?

Westlakes has certainly been trying for among last weeks callbacks to this the WIA news broadcast was their 1,000 call-sign recorded from the weekly casts on their 2 meter morning session.

On behalf of both the WIA and Westlakes I congratulate all those who have called in to date including the 1,000th VK2HDL for assisting in achieving this milestone.

Well done WestlakesARC

2 stations have topped the 2000 check in mark this WIA year, with 2 broadcasts left to tally.

Adelaide's VK5RAD leads the nation with 2534 Melbourne's VK3BWI network comes 2nd with 2127.

Queensland has 4 outlets each in excess of 1000,
Rockhampton 1009
Bundaberg / Gladstone 1252
Sunshine Coast 1018
Brisbane Sunday mornings on VK4RBN 1391

Perth VK6RAP Sunday mornings clocks 1301

In VK7 Hobart 2 meters has 1655 and in the north Launceston has 980 and should tick over into the 1000 this weekend.

The 2 we would have expected to have reached the 1k milestone early in the year are way behind, being VK2 Sydney 2 meters and Gold Coast mornings.

Please note that Ross Anderson VK4AQ located in Innisfail, is the new contributor for the monthly VK4 column in AR. VK4 Hams, please assist by forwarding news items from your area to Ross, so he can compile the bulletin to send to AR.

Ross's contact details are:

Ross Anderson
PO Box 1511
Innisfail
QLD 4860
Phone 07 40617246
Email: vk4aq@bigpond.net.au

Thanks Ross, for assisting with amateur radio in Queensland, and we look forward to seeing your column in AR.

NOW ROBERT BROOMHEAD - VK3KRB.

WW SPECIAL INTEREST GROUPS --- FINAL FRONTIER
AMSAT-VK UNOFFICIAL HF Net.
2nd Sunday each month.
April through October 1000 UTC 3.685 MHz

We heard earlier Space Tourist Charles during our international spot, well Friday weeks successful ARISS amateur radio contact with the Space Tourist and students at Fairborn High School in Ohio USA was in no small way thanks to Australia.

No it didn't come "via the Dish" but as Dr. Charles Simonyi and his ISS passed over Australia, contact was through ARISS telebridge station VK4KHZ located at Glenden QLD.

(((((((pause for audio)))))))

This was the first ARISS contact for Charles and he operated like a real pro, answering 29 questions from the students in 10 minutes and 4 seconds, until the ISS disappeared over the horizon.

For information and assistance on how you can get your local school involved in the ARISS program contact Tony VK5ZAI the Australian coordinator of ARISS.
(Shane Lynd VK4KHZ ARISS Telebridge Station).

WW SPECIAL INTEREST GROUPS --- Internet Linking of Repeaters

NERG News report a program called ElseeMore - EchoLink for Blind Operators has been developed by Tony VK3ZTR (tonywakefield.com.au)

This program assists Blind and Visually Impaired amateurs in operating the popular EchoLink Internet linking program.

Normally EchoLink requires the use of the keyboard and mouse, and the ability to read menus and text displays. ElseeMore is simplifying the user interface. Large screen fonts and simplified text displays can be used by partially sighted operators, while voice prompts are use by totally blind operators to navigate through the EchoLink controls.

ElseeMore can be configured by an assistant (either locally or over the Internet) so that the blind operator can easily access pre-set favourite EchoLink nodes.

Tony says the program has been quite popular not only with blind operators but also operators having 20-20 vision, the large font display and speech announcements are great for monitoring operations from across a room!

WW SPECIAL INTEREST GROUPS --- RESCUE RADIO

EMERGENCY FREQUENCIES REGION ONE
21.360 - 18.160 - 14.300 - 7.060 - 3.760 MHz.

IARU Region 1 invites the HQ-stations of its member societies and stations of special emergency communication groups to participate in the "Second EmCom party on the Air" on Saturday, May the 5th, 2007 at 11.00 - 15.00 UTC.

The operation will take place on and near the emergency Centre-of-Activity (CoA) frequencies on 40, 20 and 15 meters (+/-QRM).

The objective of the party is to increase the common interest among member societies in emergency communication, test how usable the CoA frequencies are across Region 1, and create practices for international emergency communication between Region 1 member societies and special emergency communication groups.

All traffic during the party will take place in SSB only.

IARU Region 1 HQ station will be OF3F in Finland.

It will be QRV simultaneously on the three CoA frequencies:
7060, 14300 and 21360 kHz +/- QRM.

During first three hours each participating station will try to contact OF3F and also as many other national HQ and special group stations as possible. During the last hour, (14.00 - 15.00 UTC) these stations will contact only OF3F for reporting. The report should be sent only once, on the band on which communication with OH3F is best.

More information including the exchange format is on the news page of www.aren.ie

SOCIAL SCENE

APRIL 22 Centre Victoria RadioFest

All is "GO" for the Centre Victoria RadioFest TODAY the 22nd of April at the Kyneton Racecourse.

Check out the website radiofest.amateurradio.com.au for full details.

See you at the family friendly Centre Victoria RadioFest, Kyneton racecourse less than an hour from Melbourne, Ballarat and Bendigo, TODAY.

MAY 5 - 6
The Clareview Gathering is a yearly event where Radio Amateurs meet

at a spot on the coast between Rockhampton and Mackay to relax, talk radio, re-establish acquaintances and participate in the world renown Saturday Night Mega-Auction.
It happens in 2007 during the Long Weekend on the 5th and 6th of May.
For further details contact Don Wilschefski VK4BY of the RADAR Club

MAY 12 MDRC Hamfest

The Moorabbin and District Amateur Radio club are please to announce, this years Hamfest will be held in the usual location, at the Brentwood Secondary College, Watsons Rd, Glen Waverly on Saturday 12th May 2006 - doors opening at 10am. The MDRC Hamfest is proud to be Victoria's biggest and this year will be no exception with displays and sales of new or preloved equipment, for anyone interested in Radio Communications and electronics.
Major door prizes, free tea and coffee, light refreshments and a sausage sizzle will also be on offer.

Trader table bookings and general enquires can be made be emailing Graeme Lewis VK3GL (vk3gl@aanet.com.au) or by phoning mobile 0418 289928

MAY 12 - BRISBANE HAMFEST

Brisbane Amateur radio Club is holding "BARCFEST 2007" on Saturday 12th May, venue is the Mount Gravatt Showground Logan Road.
If you wish to book a table information can be found on the club's website http://qsl.net/vk4ba or you can call Les VK4ZLP on 33437247.
Food will be available at the hall, Starting time is 10am.

July 7+8 - GippsTech

Conference for VHF, UHF & SHF enthusiasts in Australia.
Held at the Gippsland Campus of Monash University in Churchill, about two hours drive east of Melbourne.

groupk...@earthlink.net wrote on Fri, 20 Apr 2007 18:00:34 EDT:

>Are we in danger of being the last generation of hams?

I'd say no. At my test session of 25 Feb 07 there were at
least two teen-agers applying for an amateur radio license.
Given that I was born before the FCC was created, the "last"
generation would be at least three before me... :-)

>(And if we are, what can we do to eliminate that danger?)

What "danger?" I see none. But more on that later.

>First, a disclaimer. I'm into my fifth decade of being a licensed
>amateur, and figure I'm good for 3 or 4 more sunspot cycles of fun. I
>love amateur radio.

Well, I've been a licensed commercial radio operator since
1956 and a licensed radio amateur since 2007. It has, in
between getting a whole new station set up, been fun.

I can't presume to guess how many sun cycles I'll have and
I don't lose sleep over it. So far, I love my wife, but
sincerely doubt I would ever love any radios like that.

>But I worry sometimes.
>
>Our service will only continue to exist so long as the majority of the
>worlds national governments believe that we bring value to the public
>in exchange for the incredibly valuable RF spectrum that is entrusted
>to our use.

I would suggest rewording that to say "bring value to the
citizens [of various nations] in terms of their enjoyment
and well-being" or something like that. I don't see that an
"exchange" of anything is necessary or warranted.

Pulling out the Red Book (NTIA) or the big chart in Part 2,
Title 47 C.F.R. on which radio service gets what in the EM
spectrum, we can find some items for USA citizens that
appear to have no intrinsic value whatsoever:

1. 30 KHz bandspace absolutely license free at 160 - 190 KHz.
Been there a long time in regulations, sees little use.

2. 400 KHz bandspace for CB (40 channels at "11m") for nothing
but Personal Communications. No license required. Heavily
used on highways, all states.

3. 1.6 MHz (!) bandspace at 72 to 73, 75.4 to 76 MHz, 80 channels for nothing but model air and surface radio control. No license required. A very fun hobby.

4. There's more, also regulated by Part 95, Title 47 C.F.R., such as Family Radio Service unlicensed transceivers, but you get the picture, I'm sure.

5. I'm not even counting the RF emitters of very short range such as the Keyless Auto Entry transmitters (millions) or the Bluetooth earpieces (look, ma, no wires to my cellphone), the tens of thousands of Wireless LANs that have invaded residences, the "WiFi" links of Internet to PCs, or other RF emitters that make our lives easier now, replacing hard wired or mechanical functions done previously.

All of the above services to citizens which could be categorized as "unessential" services since they don't immediately secure their absolute safety or insure their well-being. The above are available in nearly all countries although their authorized frequencies may vary due to their adminstrations' regulations. Items (2) through (5) came into being within the last two decades or so.

The model radio control bandspace is only 100 KHz narrower than the worldwide 10m amateur band. Model radio control is pure hobby-amusement and no modeler (that I've heard/seen) makes any claims of supplanting vehicles in case of disaster or emergency, nor is that hobby claimed to be a starting point for any life-long career in using/designing vehicles, boats, or aircraft.

>I think if the members of ITU collectively asked "Are the hams of the
>world doing anything which justifies their generous chunks assigned
>spectrum?" the honest answer would be "Probably not."

I will ask "which chunks in what spectrum?" Hams of the HF persuasion are one group, the "VHF-ers" (and up) are the other. HF has been relatively static in change for at least two decades, and decreased prior to that with many communications services formerly on HF migrating to satellite relay.

The last HF amateur band worldwide use allocation happened in 1979 from the World Administrative Radio Conference and those new bands are dubbed "WARC" for short by hams. 1979 was 28 years ago and there doesn't appear to be any new users begging for HF bandspace. The new "channels" at 60m were assigned by the FCC for amateur use based largely on ARRL lobbying, on the basis of some kind of necessity of equatorial communications for [hurricane] disasters. The lobbying does not, to me at least, seem to take into account what the equatorial nations have done or not done for their communications. Regardless, the added amateur bandspace was just a few slivers.

In the world above 30 MHz it is a whole new ballgame. Demands by business and governments up there are great. Nearly all of the US government's "auction" monies on new service providers come from there. The FCC's HDTV channel frequency reallocation plan has resulted in hundreds of MHz of new bandspace for new radio services, nearly all allocated under auction. Maybe there was some effort of amateurs to secure a little bit of the "700 MHz" vicinity openings for hams but I can't recall seeing any. But, the World Above 30 MHz is largely Line of Sight in use. The only real crowding of those bands occurs in big urban areas. There doesn't seem to be a Big Need for bandspace above 30 MHz for US radio amateurs.

>What are we going to do about that?

Speaking from 54 years from my first HF radio experience to becoming a new amateur nearly two months ago and observing EM spectrum use while working in industry in all the time in between, I would say "don't take yourselves so seriously within your radio service!" Amateur radio is a hobby, a fun hobby. If other countries' hobbyists can enjoy some chunks of EM spectrum just for hobbyist fun, then why can't the USA?

As to this whole claim of being a backup communications provider when the infrasture fails in disasters, I have to say show me in a detailed report where it was essential. Having been required to design electronics for terrible environments, I know that amateur radio equipment isn't going to survive better than the infrastructures' gear. [see May QST for one piece of equipment that didn't survive Katrina...lost with one amateur's entire station]

The Public Safety Radio Services have their radios now and use them every day. NOAA has its weather observation services plus satellite downlinks. Harbor and inland waterways have their radio services and plans for emergencies there. The FAA routinely handles aircraft emergencies every week with the aid of radio. Believe it or not, the telephony infrastructure can come back to life when its subscribers stop all trying to use their switching system all at once; they've had battery backup in central offices for more than half a century. Truckers daily help fellow motorists on highways, sometimes alerted over their CBs. Yes, amateur radio CAN be a help in emergencies just as ALL citizens can be a help, with or without any license for anything.

There hasn't been any need for trained morse code operators for over a decade for any WWII-era "pool" to help the nation. With anything in radio. The miliaries do adequate training of their members, government radio with theirs. I'd say the salient feature of amateur radio is its ability to introduce newcomers to a fascinating technologically-

heavy activity...somethine they can have fun with while learning. For youngsters it MIGHT be a starting point for their eventual working careers. For adults and older folks it can be just fun in itself. There's seemingly some puritanical echoes in the general repeated "reasons" for being IN amateur radio...those leave out the FUN element. I see that as a liability to ham radio promotion, diametrically opposite to being an asset. Is having fun so terrible? Especially having fun while learning a new technology (for newcomers) or new application (for those already experienced)?

Recreation IS, to my mind, an asset for all. It diverts our stresses from making a living, eases tensions, makes a life experience more enjoyable. If that recreation can also increase individuals' intellectual capacity, I say "so much the better!" Maybe I'm biased having been IN the electronics industry so long (sans 'benefit' of ham license) and maybe because I happen to like the fascinating technology enough that I liked most of my work. It has been a great, stimulating trip for me and it is still happening. It could be for others, too, those who look forward instead of backward to what was, a was that will never be again.

Thanks for the tip.

As a paid subscriber to McGraw-Hill's Electronics, I have
my own copy. I've seen it in a couple of technical libraries
but do not expect anyone to do an Acrobat trick of scanning
all those pages. I mentioned it as an overview of the entire
electronics field and think it did its job very well.

I neglected to mention Aitkins previous history, "The
Syntony of Spark." While it was good, it neglected to
cover as much of the politics of the 1920s in regards to
radio in general...in my opinion, at least.

>
> What are we going to do about that?

I'm frankly more concerned about the people aspect of this issue than the spectrum issue.

As others in the thread have pointed out, HF spectrum is not particularly valuable these days. I don't think we're in any huge danger of losing those allocations. Even VHF and the lower end of UHF aren't as sought-after as they once were.

The thing that bothers me is the decline in the number of active ham radio operators. Ham radio as a hobby has many aspects, but most of them involve collaboration with other people, either on the air or otherwise. As the number of people declines, the potential for the hobby as a whole declines.

I live in a rural area, so I see this trend more than those of you in densely-populated areas. Our local club is teetering on the edge of extinction, and the people who are involved tend not to be much interested in radio -- they care more about the social aspects of drinking coffee with their buddies. When it's time to mount some kind of local effort, be it Skywarn, Field Day, or even the annual picnic, it's harder and harder to attract a critical mass of people to participate.

I suspect that my view is atypical, but I don't know if it's atypical because it forecasts what's in store for ham radio as a hobby, or atypical because it's not seeing the positive aspects like young people entering the hobby. But the future of the hobby depends on *people*. We could have all the spectrum allocation in the world, but if there's no one there to use it . . .

What are we going to do about it? I ask myself that question regularly and still don't have a good answer. To me, the goal is to recruit young folks into the hobby and to actually involve them so that they're active hams instead of numbers in a listing. When I was a young ham, one of the local high school teachers was an effective recruiter for new hams. But then again, there was an electronics lab in that school, and I doubt that many of those are left. Times have changed, and we need to figure out ways to make ham radio interesting to the new generation. I just don't know what those ways are.

If the worldwide communications capabilities of 'shortwaves' was
"Already known by non-hobbyist technologists", as you claimed,
why weren't those "non-hobbyist technologists" actually *using*
those wavelengths?
```

Is there any record of non-amateur transatlantic one-way communication on wavelengths of 200 meters or shorter with less than 1000 watts before December of 1921? Any record of two-way transatlantic communication on wavelengths of 200 meters or shorter before November 27, 1923? That's when amateurs achieved those distances.

And they weren't isolated one-time results, either. The Atlantic and Pacific were spanned by amateurs in those years. For example, in the Transatlantic Tests of 1922, over 300 American amateur stations from every US radio district were heard in Europe. In the fall of 1923, over 100 American amateur stations were heard in Australia and/or New Zealand. All on 200 meters or shorter, all with power less than 1000 watts. Where were the "non-hobbyist technologists" when all this was going on?

>
> From those three I've come to the conclusion that the forcing
> of radio amateurs in the USA to "below 200 meters" (above 1.5
> MHz) was purely and simply politics of the day.

Yes, it was politics. Or rather, regulation. In fact, about 1920 there was a proposal to expand the amateur limit *downward* to 275 meters, but early broadcasting put an end to that.

Amateurs were limited to "200 Meters And Down" because the professionals thought those frequencies to be useless for long distance communications. The driving force was to eliminate interference (real or imagined) to commercial operations. That was also the reason for the 1000 watt power limit.

> It should be
> no surprise to know that radio use insofar as frequencies was
> little more than chaotic before 1920, little more than that
> during the entirety of the 1920s decade.

How "chaotic" was it, really? The radio laws of 1912 pushed amateurs to the supposedly-useless short waves. The commercial users were not excluded from those short waves, however.

> Broadcasters wanted
> what we now know as the "AM broadcast band" for their exclusive
> use. Actually, that was a legitimate desire since broadcasters
> would serve millions of citizens, not just a few thousands of
> radio amateurs at the time.

Broadcasting did not really get going until about 1920. Amateurs had been relegated to "200 Meters and Down" in 1912, eight years and a World War earlier.

> Politics of the times did not stop with broadcasters versus
> amateurs.

It was not the broadcasters who pushed amateurs off the longer waves in 1912.

> For almost two decades the United States Navy

>   Franklin Roosevelt to Congress to establish the Federal
>   Communications Commission to consolidate radio and telegram
>   regulations of 1933 and 1934, found on the FCC website.

That's all very interesting, but it has little to do with the fact
that it was
amateurs who pioneered the "shortwaves", not "non-hobbyist
technologists".
>

Agreed. The transistor, for example, was invented/discovered by Bell
Labs researchers looking to build a switch, not an amplifier.

>   Netherlands Telegraph Administration in 1934.

That's 11 years after amateurs showed the usefulness of HF for long
distance communications.

There were amateurs using SSB voice in 1934, too. Ray Moore, W6DEI,
and a handful of others were on the amateur bands with SSB
then.

> This was
>   the Netherlands to the Netherlands Antilles (off the coast
>   of South America). [diagram of receiver on page 235]

So it took amateurs to discover the usefulness of the shortwaves. That
usefulness wasn't "already known to non-hobbyist technologists".
>
> >The Amateurs were confined to that area, and the experimentally

So amateurs continue to innovate and discover, even today.

MF/HF is only a minor fraction of our allocations. Maybe it's not
vulnerable, or maybe it is, but compared to the massive amount of VHF/
UHF spectrum we could lose, I consider HF an insignificant issue.

So I pose my question again..... "What are we going to do about
that?"

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 22 APRIL 2007

You are listening to Amateur Radio Station ZS6SRL of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is broadcast every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. This broadcast can also be heard on Echolink by connecting to ZS6FCS. To listen to a web stream go to www.sarl.org.za, click on ARMI and follow the links. This, and previous bulletins, can be downloaded from the web site of the SARL i.e. www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

This transmission is by Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, 14,235 and 51,400 MHz as well as 438,825 MHz in the Pretoria area. (Other news readers please change to suit).

In the news today:

HELP THE SARL TO UPDATE THE CALLBOOK

NEXT INTECNET TO FEATURE A DISCUSSION ON THE EASTERN CAPE REPEATER NETWORK

SOUTHERN AFRICAN DX SURVEY

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

HELP THE SARL TO UPDATE THE CALLBOOK

A call book is only as good as the correctness of its entries. Members of the SARL are invited to use the advanced facilities to check entries and send updates to the SARL office.

Please check the callbook entries for your areas using the advanced features on www.sarl.org.za. Using this tool, members can call up all the callsigns in a town, or postal code, or even part of a postal code.

For example, if you would like to see all the amateurs in East London, use the "Postal code" search option and type in "52", this will give all the callsigns where the postal code in the QSL information begins with 52. Similarly if one types in "00" it will list all the entries in the postal code area 00 which is Pretoria and surrounding areas.

Using such a list of names and callsigns please help to identify silent keys whom have not been reported to the SARL or ICASA. If you have information about any such person, or a persons who have moved away and no longer have their South African callsigns, please let the SARL office know.

The office fax number is 088 011 675 2793, or you can e-mail the information to Vee Antal at admin@sarl.org.za.

If you are not a member of the SARL you cannot use the advanced facilities, you can however look up your own callsign and supply any corrections by emailing the details to admin@sarl.org.za or faxing it to 088 011 675 2793. May be it is now time that you joined.

Remember the SARL relies on all amateurs to keep the callbook data accurate. When last did you check your callbook entry? The SARL callbook is used by the publishers of international callbooks and web look-up facilities. It is therefore in your own interest to ensure that your information is up to date.

Over and above normal QSL information you'd expect to find in any callbook, did you know that: - You can check to see if a callsign is active on APRS and even see its last reported location, and that of any of their SSIDs? - You can see how many QSO's have been confirmed by this person using the SARL's SA-QSL system? - You can see if you've worked this station before and had a QSO confirmed on SA-QSL? - You can see a photo of this person? - You can see their Grid Locator if they have one listed, and if they do you can also see a Google Earth type map of the area where they live? In the major centers these maps can be zoomed in to the point where you can see the car parked in the driveway. - You can also use this map to pin point your QTH to within a few meters. - You can see if this person is a SARL member and therefore accessible through the league's QSL bureau.

NEXT INTECNET TO FEATURE A DISCUSSION ON THE EASTERN CAPE REPEATER NETWORK

The next INTECNET is on Sunday evening 6 May with Chris Scarr, ZS2AAW, as the guest speaker. Chris will dicuss the concept behind the Eastern Cape Repeater Network which now strecthes as far as Cape Town and Bloemfontein. He will also share some of the new ideas he has for the network.

The President's Net will precede the Intecnet at 19:00. Graham Hartlett will give an update on several suggestions made at the AGM and discuss implememtation strategies discussed at the first council meeting the week before the net. Intecnet follows the President's net at 20:00. Clubs are urged to link their local repeater to the conference network. Send details of the landline to be linked to armi@sarl.org.za.

SARL OFFICE FAX FACILITY

The SARL office is using a fax mail system to receive faxes. This allows for faxes to be distributed to Councillors for their attention.

It is therefore import to send faxes to the full number which is 088 011 675 2793. Please only use this number in the future.

ZR's AND ZU's FAR MORE FORTUNATE THAN THEIR AMERICAN COUNTERPARTS

Technician-class licencees in the USA, who gained extra priveleges on February 23rd of this year, are still not permitted to operate phone (voice) on any frequency below their 10 m band allocation.

In addition to all Amateur Radio operating privileges above 50 MHz, Technicians who never passed a Morse code test now have CW privileges on certain segments of 80, 40 and 15 meters plus new CW, RTTY, data and SSB privileges on certain segments of 10 meters.

Thanks to the input of the SARL and its' members, amateurs in South Africa who hold the equivalent to the USA's technician-class licence, have for the past two years had almost identical priveleges to their ZS-counterparts. Even the newly revamped entry-level ZU class licence has more phone priveleges!

Food for thought while you are mulling over taking the plunge and finally becoming a league member.

COMPETETION NEWS

SOUTHERN AFRICAN DX SURVEY

Which DX entities are most wanted by Southern African radio amateurs? How does the most wanted listing for Southern Africa look? Dennis, ZS4BS, has created a MS Excel spreadsheet containing the 2007 DXCC list and there is place where you can indicate which DXCC entities you need on CW, SSB or digital modes (RTTY, PSK, etc). The spreadsheet is available from Dennis, zs4bs@netactive.co.za or you can download it from the SARL web site at www.sarl.org.za. The closing date for the survey is 30th June 2007.

PEARS DIGITAL AND MICROWAVE COMPETETION

The Port Elizabeth ARS has informed the SARL Contest Manager that they have decided to scrap the PEARS Digital and Microwave contest. For the past two years, there have been no entries.

CLUB NEWS

NEW CLUB

A new club, The Lowveld Radio Amateur Club, was established in Nelspruit, Mpumalanga. The following members were elected to its management committee:

Chairman, Piet Badenhorst, ZS6PJB; Vice chairman, Henri Steyl, ZS6ST; RAE, Helgi Braithwaite, ZS6HB; Repeaters and Technical, Nic Cronje ZS6WW.

The club installed a new TAIT repeater on 145,675 MHz, giving coverage to the Nelspruit, White River and Sabie areas and it also covers part of the N4 main route.

They are also experimenting with APRS, UI VIEW and have an IRLP Node which is continuously running.

Congratulations with the initiative in the Low Veld, and may your club go from strength to strength.

KALAHARI-KAROO CLUB ACTIVITIES

The long weekend from 27 April to 1 May is going to be a very busy time in Division 3. The Kalahari-Karoo Amateur Radio Club reports that the following activities will be happening:

The Landcruiser Club of South Africa (LCCSA) will be gathering at the Boegoeberg Dam. Carel, ZS3OBE, will be operating an educational field station, ZS3FLY, to raise the awareness of amateur radio among the members of the LCCSA and thereby recruit members to write the RAE. Word has it that there are 5 or 6 new ZU amateurs amongst the participants.

The Voortrekkers have a "Vasbyt" camping weekend at the Lohatla Military Training Area. Gerhard, ZS3TG, Dani&#65533;l, ZS3DS, and Piet, ZS3DI, will operate an educational field station to give these youngsters exposure to amateur radio. They will mainly be active on 40, 80 and occasionally 2 m. Their QTH (camp) will be in KG11nv. They will be on air from Saturday 28th until Monday 30th April.

The Adventure Radio Club will be visiting Division 3. They will camp on Verneuk Pan and operate their field station, ZS3ARC.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at very low levels. The geomagnetic field is expected to range from unsettled to major storm levels on 28 to 29 April. The expected Effective Sun Spot number for the coming week will be less than 5.

20 and 15 metre will provide best opportunities for DX. There is a possibility of 15 and 20 metre openings towards India from about 06:00 and again at 13:00 CAT. Conditions are going to be challenging towards Australia. From about 15:00, there may be good 10, 15 and 20 m openings towards Europe. Contacts to the USA are going to be very challenging. For the CW and digital enthusiasts it may also be worth monitoring 10 MHz.

Although the predictions may not be too enthusiatic, HF always has the capability to surprise you. You will never know what you are missing unless you switch on your rig, listen and also call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

27 April to 1 May - ZS3FLY, with the Land Cruiser Club at Boegeoebergdam, on the air also ZS1 Amateur Radio Club active from Verneukpan; 28 to 30 April - ZS3ARK active with the Voortrekkers at Lohatla; 5 May - Cape Town ARC Flea Market and also the West Rand Radio Club Flea Market; 6 May - President's Net and Intechnet; 30 June - Closing date for updating of SA DX Survey.

SARL News depends on clubs and individuals for news items of importance and interest to radio amateurs. The one and only way to ensure that your contribution will reach the SARL News team, is to place it in www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date. It will be appreciated if you will do it in both Afrikaans and English.

The SARL also invites all listeners to listen to the program Amateur Radio Mirror International this Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 695 kHz. Audio is also streamed on www.zs6mrk.org and on Echolink from ZS6FCS as for this bulletin. A repeat transmission takes place on Mondays at 21:00 on 3 215 kHz. Telkom and Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

You have been listening to a news bulletin by the South African Radio League, which was compiled by George, ZS6NE.

A prosperous week to all, 73.

/EX

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate
articles, it was decided to create the group as a moderated newsgroup.
```

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

This all sprang from the ARC requiring, in the aftermath of bad
incidents in the Katrina recovery, that anyone handling ARC money or
resources be vetted or bonded. Having served on the ARC California
state communications advisory committee in years past, I have observed
that, just as with many bureaucracies, they take that "if it's needed
for one, it's needed for all" approach to such things.

Having survived many security clearance investigations for both paid
and unpaid positions, it's no big deal for me, but I suspect that they
will back down on this one.

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group every month. You are now reading the first article, which explains what rec.radio.info is, and answers some Frequently Asked Questions. The second article is titled Posting Guidelines, and you only need to read it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet community with a resource for information, news, and facts about any and all things radio.

All the other rec.radio groups are intended for discussions and general chit chat about radio. Rec.radio.info will contain informational, factual articles only. Follow-ups are redirected to an appropriate other group, and further discussion (if any) will not take place in rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.

The site from which we moderate this newsgroup, "Public Access Internet
and Unix, NYC" (Panix), is directly connected to the Internet, and
```

articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions
rec.radio.shortwave International broadcasting on the 'HF' bands

rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org>

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Actually, the whole gist of the article was that the Red Cross is *not*
interested in your credit report. The issue relates to the wording on
the web site where you give your permission for the background check.
The ARRL insists that you're agreeing to a credit check; the Red Cross
doesn't see it that way. It's an unfortunate situation.

> This all sprang from the ARC requiring, in the aftermath of bad
> incidents in the Katrina recovery, that anyone handling ARC money or
> resources be vetted or bonded.

I'm not sure that "bonded" is the right word to use in this context. As
far as I know, bonding in the technical sense is not involved for
volunteers.

> Having served on the ARC California
> state communications advisory committee in years past, I have observed
> that, just as with many bureaucracies, they take that "if it's needed
> for one, it's needed for all" approach to such things.

Since a national disaster is likely to draw people from a large area, I
support the idea that a general Red-Cross-wide policy is appropriate.
Not that a background check is an infallible way of discouraging the
folks you want to discourage, but if I'm sleeping in an open room with
fifty other disaster volunteers, it makes me feel just a little more
secure if I think that the other people in the room had at least a
cursory screening.

> Having survived many security clearance investigations for both paid
> and unpaid positions, it's no big deal for me, but I suspect that they
> will back down on this one.

I really doubt that they will back down in terms of actual Red Cross
volunteers.

But I was encouraged that the latest information from the ARRL stresses
the fact that hams can help with communications for seven days without a
background check. Other than really significant national disasters,
that policy makes the background check a non issue.

In terms of how many kHz we have, yes. Except for 6 meters has more
kHz than all of the 9 MF/HF bands plus the channels at 60 meters. Same
for almost every amateur allocation above 30 MHz.

But for some reason those HF/MF bands are considered extremely
desirable by radio amateurs.

>Maybe it's not
> vulnerable, or maybe it is, but compared to the massive amount of VHF/
> UHF spectrum we could lose, I consider HF an insignificant issue.

Which would you rather lose - 1 MHz of the 1296 MHz band, or all of
160, 40, 20, 30 and 17 meter bands? Same amount of bandwidth...

> So I pose my question again..... "What are we going to do about
> that?"

The first thing is to simply *use* that spectrum. The very best
argument for reassignment of spectrum is that the folks who have it
aren't using it. or aren't using much of it. That argument was one
reason we lost 220-222 MHz: the folks who wanted it were able to
convince FCC that we hams could fit all of our 220-222 activities into
222-225.

But you can't force amateurs to operate on certain bands. They can be
encouraged, but not forced. So the question becomes "what will make
the VHF/UHF amateur bands more attractive to hams?"

Perhaps a new generation of near-geosynchronous amateur satellites would attract more activity. Or the deployment of a highspeed linked repeater network. But those things require sizable infrastructure investments by amateurs.

Perhaps, when we speak of those VHF/UHF bands, we're seeing history repeat itself.

In 1912, amateurs were legislated to "200 Meters And Down", meaning they were legislated off what were then considered to be the most-useful wavelengths. After the 1912 laws went into effect, amateurs could get station licenses for any of the 'shortwaves' simply for the asking.

But once those amateurs showed how useful those 'shortwaves' were, others followed, and by 1924 or so amateurs were confined to certain bands. No longer could amateurs simply pick a wave and get a license to use it.

Then in 1927 came the "1929 rules", which significantly narrowed some of the existing bands. 40 meters had been 7000 - 8000 kHz before the 1929 rules, but once they went into effect, the band was 7000 - 7300. 20 meters went from 14000 - 16000 to 14000 - 14400. There were other changes such as requiring stable and clean signals.

Some said that those 1929 rules would strangle amateur radio, and would soon kill it off due to overcrowding and the expense/complexity of a "1929 transmitter". But exactly the opposite happened, because in the years after the 1929 rules, the number of US hams almost tripled and the technology used took great leaps forward.

We hams got our enormous VHF/UHF allocations after WW2, when much of it was considered relatively useless, or at least not as useful as the lower frequencies. That's all changed in the past couple of decades.

Perhaps it's 1929 all over again in some ways.

in danger? perhaps we are but we have ALWAYS been in such danger

are we likly to lose specturm? almost certainly

are we doomed? not likely

OTOH we certianly could use to be more encouraging of new hams

was at a Hamfest only yesterday the first for my wife as arelitivly
new general and she felt kida out of place and not exactly welcomed
(She is someone that they don't know quite what to make of although
most of the folks in room are more likely to have talked to her on Air
than they haare to have talked to me" and fewer stil of know exactly
what to make of me but those are other stmatters

one thing our clubs and hamfest comittees could do is be a bit more
organized about welcomeing New Hams

it would require not money but a Govt foot in the rear to gain Acess
to those orbital spots there is already something of a traffic jam

OTOH one thing that might help is for old hams to learn more about
about how we can in fact in Do such things as EME I ended up giving
going abit about Modern EME and Ms work at our local hamfest (I may
end up riding a circut giving tlaks on the subject in the UP but that
is another thread

That's a very valid concern and goes to the core of present-day amateur radio activity.

True enough at the regulatory level.

>The thing that bothers me is the decline in the number of active ham
>radio operators. Ham radio as a hobby has many aspects, but most of
>them involve collaboration with other people, either on the air or
>otherwise. As the number of people declines, the potential for the
>hobby as a whole declines.

Our entire USA society has far more available recreational pursuits now than a half century ago when I was a young adult. That affects every recreational activity, not just amateur radio. It is also quite normal in human society.

On the other hand, the newcomers to amateur radio are, just barely, keeping pace with the number of licensee expirations. That has been going on for four years since the peak of 2003. Further, newcomers have been entering the ham world above 30 MHz, a region quite different from the older, established HF world.

Communication is a common desire in all human groupings. In all forms. In 2004 the US Bureau of the Census reported that one out of three Americans had a cell phone subscription. Not bad for a public service that, 20 years ago, barely had enough users to be worth a poll-taking effort. The Census Bureau also said that one in five American households had some form of Internet access; the Internet went public in 1991, just 16

years ago. Internet access is not possible without some form
of personal computer which, a quarter century ago, were things
only for computer hobbyists. We all have had wired telephone
service all our lives yet that didn't exist two centuries ago.
We have, nearly everywhere, more TV channels for news as well
as entertainment now than the TV Boom times of the 1950s. We
have the CDs for music, video, and personal data such as
photos (instant digital, no going to "have them developed").
We have boom boxes, IPods, and broadcast receivers built into
headsets. We are almost awash with individual information
and entertainment input. :-)

Considering all of the above, I was a bit surprised to see
so many folks younger than I (almost everyone is) in the 20
or so at my amateur radio test session of 25 Feb 07. There
were about 10 more in the beginning but those were doing
adminstrative changes or changing from Tech Plus to Tech,
clearing the room for the actual testing.

>I live in a rural area, so I see this trend more than those of you in
>densely-populated areas. Our local club is teetering on the edge of
>extinction, and the people who are involved tend not to be much
>interested in radio -- they care more about the social aspects of
>drinking coffee with their buddies. When it's time to mount some kind
>of local effort, be it Skywarn, Field Day, or even the annual picnic,
>it's harder and harder to attract a critical mass of people to participate.

That is common in human groupings. Clubs are essentially
fraternal orders, though usually on a smaller scale. Some
were formed for a specific purpose, not necessarily for the
entirety of all amateur radio activities.

Clubs about specific activites will, over time, morph into
reflections of those in the club who wish to lead more than
be enthused about an activity per se. That is normal also.
Depending on the type of leadership, a club may or may not
be "good" for that activity. Unfortunately, quantification
of "good" tends to be subjective to every interpreter of it.

>I suspect that my view is atypical, but I don't know if it's atypical
>because it forecasts what's in store for ham radio as a hobby, or
>atypical because it's not seeing the positive aspects like young people
>entering the hobby. But the future of the hobby depends on *people*.

Absolutely depends on people. My issue with "my" national
organization is that they pay too much attention on extremes,
the long-timers and the newcomers. They almost ignore the
huge demographic grouping in the middle. They have made very
little attempt to recruit membership of the huge license
class (the biggest for years, without doubt) who were
restricted to the spectrum above 30 MHz in the USA. The
continuing emphasis in activities have been on "the bands"

referring to HF, the old ways of the hobby. That went, in my view, from "gentrification" to "stratification." That reflects downward to the local club level.

I'm all for "young people" entering amateur radio. But that is not the only demographic source of newcomers. An objective examination would show that "young people" are the most-influenced by peer pressure and the tremendous entertainment resources available to them now. Largely ignored is the twenty- and thirty-somethings who have started to stabilize in their life experience, have reached an economic level where they can afford a hobby and have some leisure time available.

I've always heard the carbon-copy stories that described teen "discoveries" of radio and that becoming their lifelong passion. It was never in regulations that one had to be a teen-ager to begin in amateur radio, nor any life oath of obeisance to amateur radio had to be sworn. On closer scrutiny, most of those teeners were such 40 to 30 years ago. Times and our society have changed but most such story-tellers seem to be unchanged.

>... To me, the goal is to recruit young
>folks into the hobby and to actually involve them so that they're active
>hams instead of numbers in a listing.

That's an excellent beginning.

A caveat: If they are active, the activity does not have to be activity of the mode of 30 to 50 years ago. Newcomers will find their own way to their own desires of activity...just like old-timers did a long time ago for their desires.

Newcomers are PEOPLE. They are not "recruits" (a la military) who must be indoctrinated almost forcibly into certain ways. While that is almost done in some clubs, it has a negative effect and the newcomers tend to say/think unprintable words to would-be leaders and drop out of the hobby in disgust.

Newcomers to the hobby don't all accept the "territorial imperative" of the long-timer who continually implies "THIS is how WE do it in ham radio." Newcomers can become familiar quickly enough with accepted formality and self-styled "radio cops" aren't needed on the air. Neither should there be a continual expressed bigotry about CB by radio amateurs. CB has been around for 49 years in the USA.

I would say that the amateur radio of now is interesting enough to the generations of now. The statistics seem to bear that out. Those actively engaged in recruiting newcomers need to look around at what is popular to the generations of now in ham radio. That may be the hardest task of all...learning what is new by those who thought

they knew it all.

Clubs as "recruting stations" for ham radio need honest enthusiasm about PEOPLE of all kinds, all ages, be friendly on a people level and not try so hard at "selling" the hobby. Newcomers who've shown up at a club have already expressed enough interest to show up, do not need the "salesmen" types who want to "make a deal" for them.

>I just don't know what those ways are.

There's no sure-fire cure. I'm not sure that there needs to be one. I've suggested a few but examples of good and bad (and indifferent) leadership abound in the various local fraternal orders and other-hobby clubs. As we agree, times have changed. That is not only for amateur radio but other hobby activities as well. We all have to change to stay "with it."

Are radio amateurs going to "lose" EM spectrum space? I didn't
know this was so dictated. If amateurs want to keep something in
radio, they have to continually fight for it; just because they
got some allocations once doesn't mean it is forever.

In the last half century, amateur radio worldwide has GAINED
allocations, not lost. Begin with WARC-79 decisions...

>> So I pose my question again..... ?"What are we going to do about
>> that?"
>
>The first thing is to simply *use* that spectrum. The very best
>argument for reassignment of spectrum is that the folks who have it
>aren't using it. or aren't using much of it.

How does "*use*" of line-of-sight get publicized nationally?

The NTIS has a specific EM Survey mobile unit which has been
used to take readings of certain areas of the United States
over an extremely wide range of frequencies. Those surveys are
available to the public and each one is extensive, technically
explicit.

Other than "popular activities" described in amateur radio
interest periodicals, the use of line-of-sight frequencies is
mentioned only in regards to an already-allocated radio
service in trade journals.

>That argument was one
>reason we lost 220-222 MHz: the folks who wanted it were able to
>convince FCC that we hams could fit all of our 220-222 activities into
>222-225.

"220" wasn't the only amateur band in dispute in the last half
century in the USA. The politics of the various disputes can't
be simplistically interpreted. As I recall, not a user of "220"
at the time, the ARRL did not argue effectively enough for its
retention to convince the FCC.

>But you can't force amateurs to operate on certain bands. They can be
>encouraged, but not forced.

Yes, they can be forced. See "200 Meters and down."

>So the question becomes "what will make
>the VHF/UHF amateur bands more attractive to hams?"

I wasn't aware that the ham bands above 30 MHz were not
attractive. Radio equipment manufacturers are continually
supplying radios and advertising VHF-and-up radios, have
been for years. There's obviously a market for them as
witness the continued advertising campaign waged with
high monetary values.

Since the inception of the no-code-test Technician class
license 16 years ago, the vast majority of newcomers in the
USA have entered amateur radio in the "world above 30 MHz."
The Technician class has become - easily - the most numerous
of all US amateur radio classes. No-code-test Technicians
were banned from privileges below 30 MHz in the USA. "Techs"
continue being newcomers despite cessation of morse code
testing in the USA for amateurs.

The migration to VHF and above in amateur radio is not
confined to the USA. JARL and Japanese electronics industry
have developed D-Star specifically for digital modes on
VHF and above. AOR in Japan has one digital voice adapter
for voice-bandwidth radios and another one from Germany has
been described in the April QST issue this year. While US
HF-only hams may shun digital anything on "their" bands, such
is readily useable on VHF and above with no basic changes.

>Perhaps a new generation of near-geosynchronous amateur satellites
>would attract more activity.

Perhaps it would be prudent to take a good look around
at the activity at VHF and above that is going on today?

>Or the deployment of a highspeed linked
>repeater network. But those things require sizable infrastructure
>investments by amateurs.

Is that a necessity? In 1977 I was shown the start of what
would grow into the present-day Condor Net on the "220" band,
operating in three states (CA, NV, AZ) and capable of being
tone-coded-linking from one repeater to any other repeater.
That was without using conventional digital logic or the
ubiquitous microprocessor. Sizeable investment by amateurs?
Yes, but also willingly done. Well done, I might add.

The latest ARRL Repeater Directory shows an enormity of
repeaters ("sizeable infrastructure investments"), most of
them public-access, installed and operated by radio amateurs.
Repeaters have been put into place all over the USA in the
last three decades plus. Even without repeaters, the use
of VHF-UHF and even low microwaves by radio amateurs has
become sizeable in urban areas of the USA.

>We hams got our enormous VHF/UHF allocations after WW2, when much of
>it was considered relatively useless, or at least not as useful as the
>lower frequencies. That's all changed in the past couple of decades.

Not being a licensed radio amateur right after WWII, I was
unaware that "VHF/UHF" was "useless." Edwin Armstrong
pioneered FM broadcasting there in the 1930s. Public safety
radio started the use it in the last 1930s, finding it very
useful compared to the old HF radios a few agencies had.
The US military was already using low VHF in the 1930s and
would continue that with the famed "walkie-talkie" of WWII.
The fledgling TV broadcast industry and their equipment
makers had already standardized on low-VHF frequencies in the
1930s (via the "first" NTSC). The US military switched to
low-VHF FM radios for vehicular operation en masse at the
beginning of WWII...even the USN had its "TBS." Radar, a
savior of tacticians in WWII, had to operate on UHF and
microwaves, was predictably quite successful in that RF
region. Still is.

All of the preceding paragraph took place 7 decades ago,
not a "couple" of them.

>Perhaps it's 1929 all over again in some ways.

Perhaps too many of the HF persuasion are affected with
ennui over their self-imposed limitations of radio use.
I still see an unlimited vista of hope and adventure in
the future. The state of the art of radio-electronics is
constantly advancing. By the looks of things, it isn't
about to stop anytime soon. Change keeps happening.

Those who refuse to change, want their endless youthful discoveries to continue, want to close off amateur activities to what was long ago, will all mourn and wail over "losses." The rest of the world will continue without them, changing things to fit the new people, not the old ones. Those who want something will have to go out and WORK for it, DO something about it, not sit around and grouse about things not being the same. The new people will have earned theirs and the future will be different. I say good for them!

The first-ever successful moonbounce was done by the U.S.
Army Signal Corps in the forties right after end of WWII.
The Army dubbed that experiment "Project Diana." That
was two decades prior to the 1960s.

My choice of the first 44 years versus the last 67 years
may seem arbitrary but the Second World War was a decided
changeover time in technology of all electronics, including
that small subset of it called radio.

> Your point is not clear. Are you claiming that since those
>technologies originated with other radio services that the
>contribution by hams was small or are you claiming that since hams
>developed and popularized those technologies that hams' contribution
>was large?

I do not claim anything. I summarized the major points of
technology untilized in amateur radio during the last 67
years of radio's existance. In the first 44 years of radio,
radio itself was considered the high-tech application of
electronics. The vacuum tube had some applications in audio
amplification and specialized instruments but "radio" for
one-way or two-way communications was favored. Radio then
was noted by the public as primarily for broadcasting but
the public were also aware of the "ham radio operator" in
this high-tech-of-its-day field.

After WWII, based on the necessities of expanding the
technology needs of war, electronics began spreading far
and wide, using circuits and systems rare or unheard-of
by the public prior to WWII: Television, "high-Fi" music
systems, magnetic tape recording (in the home as well as
in entertainment industry), FM broadcasting as an adjunct
to home music systems, electronic flash units for photo-

graphy, photoelectric systems for security and warning, intercom systems, dictating machines. That was prior to the invention of the transistor and the true start of the solid-state era in electronics.

The transistor, various junction diode types, the integrated circuit, then the large-scale-integrated circuit semiconductor structures' availability can be likened to a megaton explosion of applications and increases in electronics use in our daily lives, from medicine and health, to accounting and automatic control, to all manner of consumer electronics not practically possible prior to WWII. "Radio" per se took a back seat in applications in the whole of the electronics industry's design and development efforts. That's neither good nor bad, simply that the possible number of applications for all electronics taking advantage of solid-state components has been almost overwhelming in quantity and scope. That continues today.

That radio communications equipment design has adopted many techniques and components used in other areas of electronics should not be a detriment. Some non-radio applications "borrowed" from radio design and one even preceded radio use: Frequency-multiplexed multi-channel carrier systems for long-distance wired telephony, also known as Single Sideband. :-)

A microprocessor or microcontroller is entirely digital in operation, yet is applied to analog radio now almost universally. That was not possible prior to 1970, yet amateur radio designs from off-the-shelf today nearly all use them for a large variety of functions, everything from HTs to top-of-the-line HF DX machines down to test equipment. It ENABLES many functions not available prior to WWII designs and its substitutes for old design funcions are superior in operation.

Electronics (including radio) does considerable "cross-pollination" of circuits and subsystems from one specialty area to another. That is good rather than bad. "Radio" has lost its specific nature of exclusivity in structure of all-analog circuits. The vacuum tube is almost obsolete for new radios, surviving only in high-power RF amplifiers for amateur, commercial, and broad-casting use. Even those are getting competition from high-frequency power transistor modular architectures. The cathode-ray tube is going that way, replaced with solid-state LCD, TFT, Plasma flat display screens, not just in television but also in oscillography and small instrumentation plus consumer applications like gas

ranges, microwaves, and lawn sprinkler controllers. About the only area of vacuum tubes not quite (yet) replaced by solid-state are high-sensitivity photo-multipliers and night observation devices. Even those are seeing competition now.

Innovation and invention today depends more on the adaptation of existing components and subsystems and putting them together than outright invention-from-scratch. Even the U.S. Patent Office is aware of that. My single patent grant in 1974 was #3,848,191. GAP Antenna Products got one in 1997 as #5,592,183 (reading from a GAP pamphlet). Nearly 2 million Patents granted in only about 25 years. :-)

Radio per se is not much involved in just trying to get a handle on how the whole thing works. That was needed in its first four decades. Messrs Hartley, Colpitts, and Pierce gave us basic oscillators necessary to start generating RF but later came Butler and others with variations using 3rd, 5th, even 7th overtone crystal controlled oscillators, plus the Varian brothers' Klystron and the original Magnetron (from the UK). Would we have a microwave oven in nearly every kitchen today if the magnetron had not been invented? :-)

BTW, the most-used oscillator circuit of today is based on the CMOS inverter with feedback through a quartz crystal or other resonator. No name associated with it. Every microprocessor has such a clock oscillator, active devices usually built-in.

> If you look at the foundational documents of ham radio (FCC Part

>radio exists for the primary purpose of having trained radio
>operators available in case of emergency. Contributing to the
>advancement of the radio art comes next. Having an enjoyable hobby is
>not even mentioned.

I have a 1997 complete 5-volume set of Title 47 Code of Federal Regulations and the current copy of Part 97, Title 47 C.F.R. Nowhere is the word "hobby" written in those regulations. That is de jure. De facto is that amateur radio is, by and large, a hobby radio activity, done for personal reasons and not for monetary compensation. The FCC is aware of that, the ARRL is aware of that, the IARU is aware of that, hundreds of different nation's administrations are aware of that.

I also have a complete set of the current NCVEC Question Pools, obtained from www.ncvec.org directly; such are not found in Part 97...but should be available through any of the many VECs.

It was not clear to me that my amateur radio test taken and passed on 25 February 2007 was for an Amateur Emergency Radio Operator. I was already a General Radiotelephone Operator (Commercial) since taking and passing my First Class Radio-telephone (Commercial) operator license in 1956. Prior to that the United States Army had trained me to operate and maintain radio communications equipment on HF, VHF, UHF, and microwave bands. I've already used my First 'Phone/GROL in other radio services. In various Parts of Title 47 C.F.R., the FCC specifically states that any emergency situation involving safety of life, no license is required to use a radio to seek help. Why would I have gotten an Amateur Radio license to be an emergency operator? I could have joined the Los Angeles Auxilliary Communications Service directly or even the California (state) Auxilliary Communications Service (they don't require any license at all). The test session was in an L.A. ACS station building, formerly a small fire house for the LAFD. I got my Amateur Radio Operator license for use in a personal hobby. That isn't against the law or even unpatriotic.

> Your comments don't follow from mine. I stated that the FCC, in
>effect, 'overruled' the ARRL and the old hams when it eliminated the
>code test. The key question is 'WHY did the FCC do that.' I am
>convinced that the FCC perceived the code requirement as being at the
>root of ham radio's failure to innovate or provide training to
>subsequent generations. The FCC killed it in order to end ham radio's
>decades-long stagnation.

You are welcome to your opinion. Seventeen years ago the FCC answered a public request when it issued a Notice of Proposed Rule Making on the creation of the no-code-test Technician class license. It said then that the Commission did not feel a test for Morse Code skill/comprehension was necessary in its regulatory position of determining whether or not an applicant was worthy of being granted an amateur radio license. A copy is available at www.nocode.org as FCC 90-53. Nine years later in Report and Order 99-412 ('Restructuring') the Commission stated nearly the same when it dropped all Morse Code test rates to 5 words per minute equivalent. By far, the largest and fastest growing U.S. Amateur Radio Service license class has been the no-code-test Technician class. The peak in number of amateur licenses granted occurred in 2003.

I see all of that as public demand, not to "support" amateur radio. From the Communications Act of 1934 to the Telecommunications Act of 1996 (both Laws of Congress) the FCC is obliged to regulate civil communications services of the United States. It is not obliged to support any one radio service over and above any other.

So maybe the answer is that the FCC should craft a new challenge of similar magnitude to stimulate the Amateur Radio service to a new golden age, similar to that which followed the 200-meters-and-down challenge.

How about this, for a two step approach?

1) Institute a new "top" license class with a "technical quotient" about 3 times as challenging as the current Extra class license, and keep the question pool secret. Holders of this license could experiment on any amateur frequency (with the usual "no deliberate interference" caveat) with any modulation scheme or information encoding scheme without special authorization or STA.

2) Starting 10 years from the effective date of the R&O, require that the following band segments can only be used with modulation types and information coding schemes which were invented in the previous 15 years. All of 160M. 3550-3600KHz. 3900-4000KHz. 7050-7150KHz. 7250-7300KHz. 14050-14100KHz. 14300-14350KHz. 21050-21100KHZ. 21400-21450KHz. All of 10M. 146-148MHz. 222-225MHz. All bands above 432MHz.

It's not misdirection, Hans. It's a plain and simple question, meant
to focus on the fact that not all kHz are created equal.

Perhaps.

I like it! The only problem is, how would the question pool be kept
secret? How could FCC be convinced, after a quarter-century of
published Q&A pools and the VE system, that this new license class
needed a different exam system than all the rest?

> Holders of this license could
> experiment on any amateur frequency (with the usual "no deliberate
> interference" caveat) with any modulation scheme or information
> encoding scheme without special authorization or STA.

The problem I see with that is, who defines 'experiment' or
'deliberate interference'?

I could see the license being used as a way around mode-subband
restrictions, rather than real experimentation.

> 2) Starting 10 years from the effective date of the R&O, require that

> 21400-21450KHz. All of 10M. 146-148MHz. 222-225MHz. All bands
> above 432MHz.

Which means that 160, 10, 220 and all above 432 would no longer be
available for the use of SSB, DSB, AM, FM, RTTY, AMTOR, PACTOR, SSTV,
TV, PSK31, and CW. Plus considerable segments of the rest of the
amateur bands would lose those modes as well. Not by voluntarily
abandonment of old modes but by law.

I don't think that's a good idea. Just because something isn't brand
new doesn't mean it should be legislated off the air.

Putting my UK hat on, how would anything done by the FCC affect us over
here, or anywhere else in the world for that matter..?

Radio knows no international frontiers and the FCC has no jurisdiction
outside of the US.

I second that remark. There's more to radio than the FCC :o)

How many people do you think would obtain this license? I don't see a latent demand out there for authorization to experiment with modes that require special authorization. I'm afraid that the actual result would be only a tiny number of upgrades, which would serve as evidence that the amateur radio service didn't need the spectrum it has now.

> 21400-21450KHz. All of 10M. 146-148MHz. 222-225MHz. All bands
> above 432MHz.

I understand your reasoning here -- you're trying to encourage use of new technology via regulation. Again, I'm afraid that it would have the opposite effect in terms of maintaining spectrum allocations -- the FCC would point to the lack of usage and use that as justification to reallocate the spectrum.

Both of these ideas attempt to change behavior of the existing populatiion of amateur radio operators. I think it's more important to focus on ideas that expand the population of licensed operators by attracting new people.

Your focus tends to be showing the regulators that hams are technical innovators, thus they deserve frequency allocations. My focus tends to be increasing the overall population of the users to increase the usage of our allocations, thus justifying them. Both of these techniques work and can be used at the same time.

I really think that the key is communications, or call it public relations or marketing if you wish. It has always struck me as ironic that hams, in a hobby that is basically communications, are generally horrible communicators. We need to motivate existing hams to actually

participate in the hobby, and we need to get the message out to potential new licensees that ham radio is an attractive leisure-time activity for them. Easy for me to say . . . but I've not personally been very successful at actually *doing* anything.

Exactly. The point of the exercise is to precipitate a "crisis" or a "challenge" similar to the "200-meters-and-down" event which is widely claimed as the catalyst which launched the "golden age" of amateur radio advancement.

Only this crisis would leave some residual segments for those not inclined to accept the challenge.

I signed one of those at my first technical job clear back in 1972, and
one for every employer since then. As far as I can tell, all of the
forms are valid forever, and if I invent something profitable enough,
all of my previous employers are going to go after it.

I don't think that we have become more greedy or self serving over the
years. I'm more inclined to think a nostalgia effect is at work.

It would have no regulatory effect at all outside the jurisdiction of the FCC, and your operations wouldn't be directly affected at all.

However, presuming the idea gained traction, obviously the secondary effect would be that hams in other countries would want to also experiment with any new modes or techniques they heard on the air and would petition their regulators to allow it.

I'm reminded of a "reverse" example of this which happened here in North America awhile back. For several years Canadian amateurs were allowed on-the-air development and use of AX-25 (packet radio) but FCC regulations prohibited W/K hams from participating. Eventually we were able to convince FCC to allow this mode. Thus in this example, the action of the Canadian regulators had an indirect secondary effect of eventually changing the mind of the FCC.

>

Who defines 'deliberate interference' now. K4ZDH comes to mind.

The definition of what would qualify as an experimental mode (not
currently in use) would be a trival administrative exercise.

> I could see the license being used as a way around mode-subband
> restrictions, rather than real experimentation.

Yes, Jim, there will always be some sea-lawyers who will try to
exploit 'cracks' in the regulations.

Obviously my PBI above is not a finished product and does not address
all the potential 'problems' and 'abuse opportunities'. I'd like to
consider it as a starting point for positive discussion. Thank you
for your participation in that spirit.

The golden age of Ham radio is the time at which the individual Ham got started. I digress, though.

I don't think that restrictions or challenges are the way to go. The 1912 Hams were not put there as a challenge to get them to innovate. They were put there because the frequencies were not thought to be worth much to anyone.

160 meters has a whole lot of baggage just to set up a station. Lot's of real estate comes to mind, as well as other antenna issues.

3550-3600KHz. 3900-4000KHz. 7050-7150KHz.
> 7250-7300KHz. 14050-14100KHz. 14300-14350KHz. 21050-21100KHZ.
> 21400-21450KHz. All of 10M. 146-148MHz. 222-225MHz. All bands
> above 432MHz.

Way too complex, IMO. And what happens to those 15 y.o. "new" technologies on Year 15 plus one day? The modulation scheme has to find a new place among all the other old school stuff. And tne need for gentlemen's band plans increase (the newer/lesser used modes really like to congregate, since there is a big difference between tuning a band to find ssb or cw signals and trying to find one little PSK signal over a whole band.

One real challenge would be to confine all Ham radio activity to one band! ;^)

Modes are an interesting conundrum. Most Hams want someone to talk, type, or tap to. So the coolest modulation scheme or digital voice mode isn't going to be of much use unless you have someone on the other end doing the same thing.

And to answer your question, we aren't going to be the last generation of Hams, IMO.

I'm not persuaded of the validity of that approach for a couple of
reasons.

1) There's no shortage of hams.

2) In many cases, simple "usage" has not been sufficient to retain an
allocation. Notice for example, television broadcasters (a much more
powerful 'lobby' than ham radio) has already been kicked off channels
70 through 83 and are in the process of being kicked off channels 52
through 69. In the near future television broadcasters will also lose
the heavily occupied VHF channels. If the politically and financially
powerful broadcasting industry could not retain those assignments, how
can hams even pretend to be able to make a case based on "population
of users" who are for the most part avocational users?

I assume you are playing devil's advocate here Hans?

An artificial crisis could have some nasty unintended results, IMO. And I don't buy that it was the crisis effect that stimulated innovation for those Hams of days gone by anyway. What they did was discover certain features of HF that were not already known. That isn't to downplay the effort, that is just how things happen. If Hams weren't confined there, someone else probably would have eventually.

If we eliminate everything but new(er) modes from 160 meters, are major discoveries going to come out of it? Not likely. I'm also trying to imagine someone getting fined by th eFCC for using an "old mode" - say a 16 year old one - on 160 meters. Just too complex a schem for my taste.

That should be an easy one to answer, and one that all volunteers should know. WHO is doing the background check, and WHAT are they checking? I don't understand how that problem can't be fixed in 10 minutes. If it hasn't been answered, we're almost assured that they are doing both crim and credit. (note in PA, we use the state police bg check - its just crim.)

I don't really care in my own case either. But the problem I see is
part of a larger issue. Volunteers are being required to get more and
more training, background checks, and other qualifications just to
perform unpaid work (some of which will now include unloading the trucks
and mopping the floor). All of us have a some point at which we say
"aww, never mind, I think I have something else to do". I lost some good
coaches that way. 8^(

Perhaps. However, as a youth I can recall numerous stories of how Joe Smith was a chemical engineer at some company, and invented Substance X in his garage while piddling around at home.

It is often said that the best job you can have is one that is also a hobby. If ham radio is your hobby, and you work as an electrical engineer by day, can you really "invent" something for ham radio that your employer wouldn't have some type of claim against?

> In my field, I find many people writing and giving away software. I think
> how much altruism exists depends on a person's outlook.

What real altruism exists in software short of Linux-based products?

Granted, there is a large amount of 'shareware' out there, but a sizeable percentage of it is simply crippleware designed to get you to upgrade to the 'commercial' version.

> What do you base the thesis of declining popularity on?

Licensed amateurs as a whole in the US has been declining for 3+ years now.
The rate of growth in Japanese amateurs has been anemic, under 1%, for the past 5+ years.
UK licenses remain fairly consistent with their peak numbers 12 years ago, although short-term trends do see an increase.
Australian licensees have been a 10+% dropoff over the past decade.

All of these observations support a generic claim that interest in ham radio is lessening.

I suspect that Hans was doing some subtle leg-pulling. :-)

Otherwise I agree with you. There is a very small percentage
of licensed radio amateurs who do actual NEW system-technique
experimentation, despite the publicity that some get. The new
stuff is generally incorporated in a product to be sold.

Does the FCC actually monitor the HF bands, particularly the
ham bands? I have no idea other that two known possibilities:
NTIS EM Survey mobile station; FCC's own remote-operated
monitor stations...which might be all-HF. Amateurs are allocated
only a fraction of the HF spectrum and, to me, it is difficult to
envision the Commission monitoring just the ham bands. I would
say the Commission gets most of its input on use from citizens'
and special-interest groups' written text. I could be wrong.

>Both of these ideas attempt to change behavior of the existing
>populatiion of amateur radio operators. I think it's more important to
>focus on ideas that expand the population of licensed operators by
>attracting new people.

I wholeheartdly agree with that! Numbers of licensees are
rather obvious pointers and the FCC, as grantor of all civil
radio licenses, has that information first-hand. What many
overlook is that the FCC keeps tabs on all RF emitter use;
since they are obligated by law to serve all non-government
users, they have to do a balancing act to seek satisfactory
compromises on regulations, mitigation of interference.

>Your focus tends to be showing the regulators that hams are technical
>innovators, thus they deserve frequency allocations. My focus tends to
>be increasing the overall population of the users to increase the usage
>of our allocations, thus justifying them. Both of these techniques work
>and can be used at the same time.

Steve, I'm going with yours. Hans' idea would make the job
of the VEC much more complex, increase the record-keeping task
at the Commission, and add quite a bit to existing Part 97
regulations. If the Amateur Radio Service got such a specific
"open-door to everything" license class, then it would set a
precedent for all other radio services. An end result would
be a decided loss of regulatory capability by the FCC in regards
to all civil radio users. The old days of user chaos in radio
might come again with that.

New developments have been made under existing regulations. In
actual practice, nearly all of new development of ALL radio is
done without any RF emission (through any antenna), including
reception testing (with/without mixing existing antenna with
new-method signals). That's part of what I did for work. Yes,
the "final test" is "on the air" but the probability of success
prior to that last test is so high it is almost a "sure thing."

>I really think that the key is communications, or call it public
>relations or marketing if you wish. It has always struck me as ironic
>that hams, in a hobby that is basically communications, are generally
>horrible communicators.

My observation for many years, too! :-) For decades, USA ham
radio has gotten news of "radio" from a single source: ARRL
publications. That's good and well-meaning, but a single
source for 700K amateur licensees? Work professionals who are
also licensed amateurs have a wealth of information at their
disposal in trade journals (most of them free) and publications
from other organizations (RSGB, for example) can be had. The
major source of news is still the ARRL. The USA might be
better served with a second source (at least).

> We need to motivate existing hams to actually
>participate in the hobby, and we need to get the message out to
>potential new licensees that ham radio is an attractive leisure-time
>activity for them.

I would suggest getting advice, even outright production,
from documentary film/TV makers. There's two groups of them:
general-coverage "broadcast" market; industry-specific. They
know their craft, can get the message through to viewers'
subconscious. They might not know all about ham radio but
most don't know details of what particular thing they are
producing for promotion. That's irrelevant since the
communication they do is to the viewer's mind, directly,
sometimes subliminally, without any need for radios or radio

operating skills or techniques. Those documentaries have been ever-present in my lifetime so they would appear to "always have been" to most others. Advertising is a sub-genre of that documentary technique, very concentrated effort to influence viewers/listeners with ideas...and those things really WORK. All of us consumers have been influenced by them, like it or not.

Outright production of documentaries might be out of the question due to cost. Those folks are pros, not amateurs, but they KNOW how to do it. The audio-visual impact of their work is STRONG compared to paper mailings. Documentary makers also have an ego as do all connected with "show business." Some might be encouraged to talk about HOW they do their thing, the good techniques, the bad techniques. That might help the planning for an actual film/TV promotion done for less cost. Not my thing but "my town" (L.A.) has a major industry in film/TV production, tens of thousands working in that. I've been acquainted with a few socially.

> Easy for me to say . . . but I've not personally
>been very successful at actually *doing* anything.

I disagree. I think you've DONE something. You've started a ball rolling, you are aware and concerned. You CARE. That's good in my opinion.

Not really devils advocate, but certainly you can see that some points are overstated for effect. Hopefully this stimulates some thinking outside the old comfortable paradigms we might hold.

I'll readily admit that some of my details are not well developed, and maybe even "pin in the sky" in many respects. This is intentional to "shock people out of their tradions" and focus on "things we've never done before. Hopefully my wild-eyed thinking gets you all to see past "the way we've done it before". At the same time, I'm not interested in defending the PBI against "problems" and "we've never done it that way" arguments, or pointless attention to incidental details.

That's correct. It wasn't intended as a challenge to strengthen Amateur Radio innovation. Quite the opposite! Hams were banished to those "worthless" (as then considered) wavelengths below 200 meters to get rid of them. Amateur radio was expected to be reduced to oblivion by this move, but in one of those "nasty unintended consequences" you mentioned, Amateur Radio became stronger than ever in consequence.

I'm only suggesting perhaps our service, in order to remain a viable PICON entity, could benefit by another similar (but more deliberate, less dibilitating) challenge. Don't get too hung up in the details, but examine the notion from a higher altitude.

Intially, I'm sure it would be a small number. Back in 1963 when I obtained my Extra license, mine was the 48th issued in my district. (Yes, they gave you a numbered certificate!). That was some 12 years after the Extra came available.

But my Extra back then didn't carry any additional privileges, no additional frequencies, no special call letters, nothing but a numbered certificate.

In contrast, the "super-Extra" which I propose would carry with it a reward in the freedom of almost unlimited experimental exploration, and might appeal to that population of latent scientists and communications inventors which we were often reminded of during the run-up to the removal of the Morse exam. I obviously can't 'crystal ball' how large that population is, but the 'opportunity cost' to find out is certainly not prohibitive. Can't see where it would hurt us, and the potential upside is exciting to me.

While the Red Cross claims that it won't actually do a
credit/background check, the form very definitely gives them permission
to conduct one. I'm not sure how much weight you want to attach to a
verbal assurance that you won't really be held to a written contract
that you have signed. Further, the Red Cross doesn't conduct the checks
itself; it subcontracts them to a credit agency.

It depends on how you interpret the text on the web site. ARRL makes a good case that the words used do give permission. The Red Cross makes a good case that they do not. I'm disappointed that the two organizations cannot agree on a tiny wording change that would satisfy both of them.

There are two distinct issues related to these background checks -- what the volunteers are agreeing to, and what's actually done. I do acknowledge a problem with the wording on the web site, based on what the ARRL has pointed out. But in terms of what is actually done, logic suggests that doing a credit check costs significantly more money, and the Red Cross is unlikely to pay for that more-detailed check. Thus, I'm pretty confident that the background check that is being done on casual volunteers is very minimal, and doesn't include credit check, just as the Red Cross has indicated in their explanations

> I'm not sure how much weight you want to attach to a
> verbal assurance that you won't really be held to a written contract
> that you have signed.

It's not a verbal assurance. The Red Cross has issued a number of written statements indicating what level of check is done and providing rationale for doing it. This does not, however, negate the issue that the ARRL has pointed out with the wording on the web site.

> Further, the Red Cross doesn't conduct the checks
> itself; it subcontracts them to a credit agency.

No, it subcontracts them to a company that does background checks. This is different from "a credit agency", and is standard procedure in today's world. No corporation does its own background checks; they all depend on companies that specialize in doing that job.

That's not to say that the company they're contracting to couldn't do a credit check, if that was part of the background check that their customer requested.

Here's how I, personally, view this situation.

I am a Red Cross volunteer. The issue of, "I'm an ARES member and just helping out the Red Cross" does not apply to me, personally. I have absolutely no problem with the Red Cross doing a background check on me,

in fact I applaud it. I trust the Red Cross; I better trust them, as they are going to be providing me with transportation, food, lodging, and security. The issue of a background check pales in significance, *for me*, compared with these other aspects.

From the perspective of a ham radio volunteer, you've got two choices. You can trust the Red Cross to do what they say they're going to do and ignore the issues that ARRL has with the wording on the background-check website. Or you can assume that you'll be involved with a specific disaster for less than a week so you won't be subject to a background check. I don't presume to tell you what to do.

Go to Linear Technology (the semiconductor company). They
will let anyone download LTSpice, a fully functional, operating
SPICE suite, complete with component library and schematic
drawing function that will automatically create a SPICE netlist.
The manual for it is a separate download, also free to anyone.
Not shareware, not some "crippleware designed to make one
upgrade." A fully working SPICE program, for nothing. Ideal
for amateur radio homebrew projects to check out any
circuit before building it in hardware. LTSpice has been out
for about a year, already has some hobby groups talking
about it, using it, with tips on how to use it for unusual
circuits and applications.

> Licensed amateurs as a whole in the US has been declining for 3+ years now.

Not really any big decline. Newcomers (never before licensed)
are filling in the gaps left by expirations. Check it out on
www.hamdata.com, right on the home page.

> All of these observations support a generic claim that interest in ham radio
> is lessening.

The drop of Ham Radio, 73 magazines happened in between
1990 and about 2003 due to lack of advertising space sales,
particularly among the "Big3" (Yaesu, Icom, Kenwood). Folks
tend to ignore those same Big3 are also engaged in making
radios for businesses and governments. They probably make
more money in that market than in the amateur radio field.

However, in the periodicals that survive there continue to be
new ham radio models being made and advertised, certain
models promoted with extras (such as Icom). Antenna
makers are still "up" and so are the hundreds of smaller
businesses selling peripheral equipment and add-ons. I'd

say that the interest in amateur radio is increasing, not the opposite.

There might even be a trend towards more newcomers entering than ever before, some hints of that already shown in numbers on www.hamdata.com.

I've recently returned to active hamming in general and contesting, and subscribing to QST.

In the CW Sweepstakes writeup in the last issue I was disappointed to find that all the line scores, top-ten sidebar, and other features were missing. Is this a new thing? I sure would like to be able to peruse those lists to see how I and others fared in the competition.

They should mention this in the article, but a lot of information
has been moved to the ARRL website. Start here:

http://www.arrl.org/contests/results/

For example, the line scores for last November's CW Sweepstakes
are on this page:

http://www.arrl.org/contests/results/prscores.html?con_id=112

The part I don't understand is that if they don't do a credit check, why
do they demand permission to do a credit check?

It isn't unreasonable to have an issue with that.

>> I'm not sure how much weight you want to attach to a
>> verbal assurance that you won't really be held to a written contract
>> that you have signed.

Respectfully, that is strange on their (Red Cross's) part. If they
were "caught" doing a credit check on a volunteer, what would hold
legal sway? Their written assurance that they wouldn't do a credit
check or your signature allowing them to do a credit check?

Even moreso, if a person gave them permission to do a criminal
background check, but not a credit check, would they refuse to allow
them to help because of the volunteer refusing to allow a check that
they don't do?

I think I'm getting a logic headache here! ;^)

It would be so much easier to just eliminate an unused part from
their application. If they don't do it, it shouldn't be there.

> From the perspective of a ham radio volunteer, you've got two
> choices.

> background-check website. Or you can assume that you'll be involved
> with a specific disaster for less than a week so you won't be subject
> to a background check. I don't presume to tell you what to do.

Of course, that is the bottom line. And here are my thoughts:
I would quite willingly submit to a background criminal check. Its a good idea, and makes sense. There are some people in this world who aren't very nice, and we would be dealing with some pretty helpless victims.

But my financial matters are quite simply none of the Red Cross's business! They don't need to know that.

So my bottom line comes down to two things. Trust and logic.

They don't quite trust me, otherwise they would just ask me if I was a nice guy and if I wouldn't harm anyone, and accept the answer. But it would be pretty credulous on their part to do that, no? So while I have the greatest hopes for them to be 100 percent credible, I would be likewise naive to take the word of people who don't trust me.

And finally, if they don't do it, it is so very strange that we have to give them permission to do something that they don't do. If they can't see the logic of that, they might have some other issues that would make volunteering for them quite interesting.

So my decision if they insist on me approving something that they don't do, is that I'll find something else to do the week of the disaster, with the illogic having equal weight with my belief that they have no business looking into my finances.

I mean if they insist on the credit check release, that is fine. I think that it is also fine that people might suggest they look into some fine tuning, especially if it costs them good people.

712. April 22, 2007 ARS License Numbers

Newsgroup: rec.radio.amateur.moderated
Date: 2007-04-25 12:54:17 UTC
From: N2EY@AOL.COM
Message-ID: <1177495887.879380.105340@t39g2000prd.googlegroups.com>
Source record: 4717

These are the number of current,
unexpired FCC-issued amateur
radio licenses held by individuals
on the stated dates, and the
percentage of the total number
of active licenses that class contains.

Percentages may not add up to exactly
100.0% due to rounding.

These totals do not include licenses
that have expired but are in the grace
period, nor do they include club, military
and other station-only licenses.

Effective April 15, 2000, FCC no longer issued
new Novice, Technician Plus and Advanced
class licenses, so the numbers of those license
classes have declined steadily since then.

Also since April 15, 2000, FCC has renewed all
existing Technician Plus licenses as Technician.
It is therefore informative to consider the totals of
the two classes, since the Technician class
includes a significant number of Technician Plus
licenses renewed as Technician.

On February 23, 2007, the last Morse Code
test element, the 5 wpm receiving test, was
eliminated as a requirement.

The ARS License Numbers:

As of May 14, 2000:

Novice- 49,329 (7.3%)
Technician - 205,394 (30.4%)
Technician Plus - 128,860 (19.1%)
General - 112,677 (16.7%)
Advanced - 99,782 (14.8%)
Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of February 22, 2007:

Novice - 22,896 (3.5%)
Technician - 293,508 (44.8%)
Technician Plus - 30,818 (4.7%)
General - 130,138 (19.9%)
Advanced - 69,050 (10.5%)
Extra - 108,270 (16.5%)

Total Tech/TechPlus - 324,326 (49.5%)

Total all classes - 654,680

As of April 1, 2007:

Novice - 22,447 (3.4%)
Technician - 288,853 (44.1%)
Technician Plus - 29,341 (4.5%)
General - 136,006 (20.8%)
Advanced - 68,478 (10.5%)
Extra - 109,343 (16.7%)

Total Tech/TechPlus - 318,194 (48.6%)

Total all classes - 654,468

As of April 15, 2007:

Novice - 22,336 (3.4%)
Technician - 288,248 (44.0%)
Technician Plus - 28,903 (4.4%)
General - 137,583 (21.0%)
Advanced - 68,342 (10.4%)
Extra - 109,675 (16.7%)

Total Tech/TechPlus - 317,151 (48.4%)

Total all classes - 655,087

As of April 22, 2007:

Novice - 22,266 (3.4%)
Technician - 287,840 (44.0%)
Technician Plus - 28,629 (4.4%)
General - 137,915 (21.1%)
Advanced - 68,249 (10.4%)
Extra - 109,797 (16.8%)

Total Tech/TechPlus - 316,469 (48.3%)

Total all classes - 654,696

Changes:

>From May 14, 2000, to February 22, 2007:

On my computers, I use the OpenOffice Suite (mostly WP and their
spreadsheet)

I use Digipan and a whole host of other Ham radio software.

Let's not forget N1MM contest logger.

A number of people produce software for the PAQSO party.

All these things share one thing in common. They are free for the download.

Even programs such as EZNEC, while charging for the full version, have
a perfectly functional demo version with the biggest limitation being
the number of "elements" you can use in it.

If that isn't enough, then 4NEC2 is free.

Altruism does indeed exist.

The "big drop-off" is largely being replaced. While we can discuss the
reason that it happened - it did happen. I suspect that we will get to
that earlier level at some point.

Perhaps the old Tech license was a bit of a dead end?

Agreed. Certainly it is in my area. There are some who would dispute
the success we are having in our area (we are running at a 2+ percent
increase after factoring in attrition for well over a year now) as a
fluke. I might respectfully suggest a new approach. 8^)

The new hams in our area are good people, and are becoming active and
well mannered hams.

714. Sixty Days

Newsgroup: rec.radio.amateur.moderated
Date: 2007-04-25 17:40:11 UTC
From: AF6AY <LenAnderson@ieee.org>
Message-ID: <1177522419.919819.195030@c18g2000prb.googlegroups.com>
Source record: 4719

U.S. License Changes over two 60 Day Periods from www.hamdata.com:

Hamdata information sorted from FCC publicly-available database of 24 April 2007
and [in square brackets] 24 January 2007:

New Licensees 2,730 [1,342]

Expirations 2,314 [2,101]

Class Changes 4,342 [985]

Call Changes 1,130 [214]

All Updates* 15,038 [16,536]

* Renewals, address or name changes, plus other administrative changes.

The number of new licensees have approximately doubled since the advent
of code testing cessation on 23 February 2007 compared to the December
2006 to January 2007 60-day period when code testing was required.

The number of license class changes have approximately quadrupled since
the advent of code testing cessation on 23 February 2007. The number of
callsign changes have almost quintupled.

Expirations are approximately the same. In the last 60 days the number of
new licensees is greater than the number of expirations; for December 2006
and January 2007 the number of new licensees were less than expirations.

The overall losses of all licensees (all classes including Club and Grace
Period) over the previous two years were 11,143 [11.528]. This is
approximately the same, only slight variation due to many factors.

I guess I'd much rather have it in print in my magazine collection, rather than some obscure web page. I see a lot of old standby things like DXCC Award listings have also evaporated. Maybe a bit 'vain', but it always felt good to see my call letters in a national magazine.

I've been "off the air" for a few years playing soldier and am now back and reacquainting myself with ham radio.

I've been able to subscribe to "QST" and "CQ", but can't find "ham Radio magazine", "73 magazine" or "Communications Quarterly" addresses anywhere. Do they still exist? Are there any new magazines other than the above that I should consider, especially technical ones? My interest is mostly antenna designing, receiver designing, and contesting.

"73 Magazine" is defunct, stopped publication a couple of years ago. I don't know about the other two.

ARRL publishes two special-purpose magazines: "QEX" for experimenters, and "National Contest Journal" for contest enthusiasts.

CQ publishes "CQ VHF".

The page http://www.arrl.org/pio/handbook/contact.html contains a list of ham-related publications.

You have been away awhile.
73 mag stopped in 2003 with the last issue being September.
Ham Radio magazine was sold to CQ magazine and was integrated with it.
Communications quarterly was bought by the ARRL which continues to publish
it under the name of QEX magazine.
The pickings have become slim.

I may have to concede that point, Dee.

Here is a recent quote (http://tinyurl.com/29e856) by the CEO of
Radio Shack.

He said: "Even the name 'RadioShack'-can you imagine two less
appealing words placed next to one another?" Day said. "What is that,
some kind of World War II terminology? Are ham radio operators still
around, even? Aren't we in the digital age?"

Yes, from the CEO of Radio Shack!

Oh, well!

73, de Hans, K0HB

Radio Shack, once one of the premier suppliers to the tinkerers and experimenters among us, and still a source of the occasional connector, roll of solder, switch, or other item, seems to be having an identiy crisis.

I recently saw, on the "Onion", this quotation reported to be from Mr. Day, their CEO. I sent the email below to them, and will report their response here.

Here's the quote: (Entire article at http://tinyurl.com/29e856)

"What is that, some kind of World War II terminology? Are ham radio operators still around, even? Aren't we in the digital age?"

Dear Mr. Day,

Yes, we are in the digital age, and luckily for you and your company ham radio operators are still around. Something around 650,000 in the USA, and millions more around the world. Many of us still know precisely how many minutes it will take us to get to the nearest Radio Shack store for an electronic part or tool that we need to get our station (probably running a digital mode) back on the air. (Seven minutes from my house.)

Maybe you need to research your market a little more, and the lack of understanding of your company which you bemoan in the "Onion" interview can be reversed.

And, oh-by-the-way, hams talk to each other ..... it's what we do ..... what do you expect we're saying about Radio Shack corporate management about now?

It is my understanding that the move to put most of the info on the
website rather than QST has been driven by three factors:

```
1) Results analysis is easier on the website
2) There are more contests today
3) Complaints from noncontesters about how much QST space was being
used
```

"ham radio" ceased publication years ago.

"Communications Quarterly" was bought by ARRL and made part of another magazine (QEX).

>Are there any new magazines other than the above that I should >consider, especially technical ones? My interest is mostly antenna >designing, rec eiver designing, and contesting.

For contesting, there's "NCJ", the National Contest Journal, published by ARRL.

For experimentation, there's QEX, published by ARRL since 1981.

Info on both at www.arrl.org

One factor I have not seem mentioned recently is the effect of rules
changes other than license test requirements on the number of hams.

For example, in the USA, the license term was doubled from 5 to 10
years back in 1984, and the 'grace period' doubled from one to two
years. One effect of these changes was that there were no expirations
at all from 1989 to 1994. Another was that the number of totally-
inactive-and-not-coming-back hams still shown on the database was
increased.

Another rules change that effects expirations is the vanity callsign
program. Unlike address changes, upgrades, etc., getting a vanity call
also generates a renewal. This may profoundly affect the distribution
of license expiration dates.

With the license term at ten years and the grace period at two years,
it can take a pretty long time for the actual loss of amateurs to show
up in the totals.

It is also important to know the details of what is included in the
numbers being cited. The raw numbers of licenses listed by
hamdata.com, for example, include both current licenses and those in
the grace period, while other sources do not include grace period
licensees.

> Perhaps the old Tech license was a bit of a dead end?
>
Perhaps. However, if so, it should be noted that only a small
percentage of them have upgraded in the past 60 days.

There is also a fairly large variation in the license totals over
fairly short periods of time. For example, the total number of
current FCC-issued amateur licenses held by individuals was:

654,680 on Feb 22, 2007 (just before rules changed)
654,265 on Mar 5, 2007
654,160 on Mar 13, 2007
654,816 on Mar 14, 2007
655,025 on Mar 16, 2007
654,094 on Mar 19, 2007
655,136 on Apr 6, 2007
655,233 on Apr 12, 2007
654,649 on Apr 16, 2007
654,540 on Apr 24, 2007

Depending on which dates are compared, all sorts of short-term trends
could appear to be happening. For example, from March 13 to April 12
the total grew by 1073 - more than 3 per day! But from April 12 to
April 24, they declined by 693 - more than 5 per day. Of course on a
longer baseline things will even out; the point is that there are
large short-term variations.

IMHO, that's more important than how many.

Looking back over the past decade or so, I see the following trends:

- The number of US hams grew in the early 1990s but began a slow
decline in the late 1990s.
- The number of US hams grew in the early 2000s (2000-2003, after the
rules changes that went into effect in April 2000) but the growth was
not sustained and began a slow decline in the mid-2003
- The recent changes (Feb 2007) appear to have stopped the decline in
the short term.
- Both the 2000 and 2007 rules changes had the effect of a far greater
number of existing hams upgrading than new hams joining.

Satire or not. I didn't see anything in your quote that I hadn't already seen in the product-mix and store operations over the last several years. You are far more likely to find a plush toy with a broadcast receiver inside, or stick-on plastic jewels for your cell phone than a 22K ohm resistor or a 7404 hex inverter.

But then, my friends convinced me that the movie "This is Spinal Tap" was a real documentary. While I have done a lot of video and audio production of musical performances, my very limited (by choice) experience with rock music acts was nearly identical to the mocumentary. :-)

I don't care if ARRL puts these things on their website. But I >DO<
care when they remove them from our club newsletter (yes, Virginia,
ARRL is, in the final analysis, a radio club and QST is the club
newsletter. <--- Hold that thought....

> 2) There are more contests today

More than when? I don't recall that ARRL sponsored a new contest in
decades.

> 3) Complaints from noncontesters about how much QST space was being
> used.

[rant]

Here's my cut on that. Editorial policy of a club newsletter
shouldn't be based on complaints, it should be based on FULL coverage
of ALL of the clubs activities. Perhaps the editors of QST agree with
that, perhaps not, but the point is moot because this decision was
driven by the BoD, not the editor.

Will these same complaints "about how much web server space is being
used" cause similar cuts there?

Three of the groups which comprise the core membership of the ARRL
radio club are Contesters, DXers, and the Field Organization. They're
not the only three, maybe not even the top three, but they are
certainly in the top 5 or 6 'interest groups' in the club.

Yet, in recent decisions the BoD has stripped contest line scores,
most DXCC listings, and Section News from our newsletter. I'm sure
that saves some page-count in QST, but it seems false economy to snub
"who brought you to the dance" just because someone(s) complained they
took up space on your dance card.

And, of course, it costs much, much less to add 10 web pages to
cover more contests (or to go into depth on one contest) than it
does to add 10 magazine pages.

"Ham Radio" magazine stopped publication in 1990, "Ham Radio
Horizons shortly before that. They were sold to CQ Communications.
CQ - for a while - published some remnants from HR called
"Communications Quarterly" (a quarterly periodical).

The first 22 years of publication of "Ham Radio" is available on a
3-disc CD set for $150 from CQ and resold by the ARRL. Stuff
in there is still 'meatier' than in QST and most QEX issues.

"Commquart" merged with QEX a few years ago.

"73" magazine ceased a few years ago. The independent periodicals
(i.e., non-ARRL supported) existed on advertising space sales and the
competition (such as from the newer "Popular Communications")
caused marketeers to go to larger demographic base magazines and
the big-chain ham equipment vendors' catalogs.

From: Pat Cook <pchamster@gmail.com>
Message-ID: <JZudnQ4DIZTAdK3bnZ2dnUVZ_qKqnZ2d@comcast.com>
Source record: 4737

Hi everyone:

The reason I ask this question is because I'd like to build a concensus as to how many of us in the OTR (Old Time Radio) community are Hams. Conversely, I'd like to build a consensus as to how many of us in the Ham community are lovers of OTR shows.

The reason behind this is simple. I'd like to consider starting up a loosely-formal net on EchoLink that's devoted to OTR. The premise would be anything related to OTR or radio in general.

As for what would be allowed for non-Ham participation, we could set up a live audio stream (I can do this with no problem) so that people can at least LISTEN to the net, though what I'd like to see happen is the possibility of using Skype as a virtual "phone patch" as it were (There shouldn't be a problem with Third Party traffic rules as far as I can see if they're properly followed).

Problem with this though is whether the EchoLink admins. would consider such an integration to be an acceptable use of the system or not (My bet is that it probably would not). But I'll ask anyway.

I'll also ask this of the EchoLink group as well, but I'd like to hear your thoughts.

Cheers & 73 to all the Hams in the community :D

In the spirit of fair play and after my ill researched rant, I just examined their online shopping site and found a reasonable assortment of general purpose opamps and other IC's, transistors, and various resistor assortments and smaller single-value resistor packs. I think I'll later take the 15 minutes (7 minutes each direction, plus 1 minute examining stock) and see if this product assortment is duplicated in their brick-and-mortar store.

If we carry that argument to its logical (but unsupportable)
conclusion, then we should take everything out of QST except the
advertising.

Besides, I'm not lobbying to add 10 magazine pages, but only to retain
the pages we had.

And therein lies my biggest beef with Radio Shack ... more and more of their merchandise is listed on their website as "web only" and isn't even carried in their stores.

I have written to their corporate HQ many times to complain about this in the most courteous and respectful terms I can muster, and they have completely ignored every single communication.

I often wonder why they bother with their stores anymore.

A faux news service the Onion may be, but they hit the nail right on the head with that article.

I think that's a reflection of what people are buying. Our local Radio Shack relocated recently, and in the process their selection of electronic components decreased. But look at it from the point of view of the person who owns the store . . . they've got a limited amount of floor space, and they need to use it in the best way to maximize profit. If they sell a dozen components a month for a net profit of $10, that large cabinet full of electronic components isn't pulling its weight. Better to replace it with another display of cell phones, boom boxes, MP3 players, or whatever is selling these days.

> I have written to their corporate HQ many times to complain about this in
> the most courteous and respectful terms I can muster, and they have

While there's no excuse for this, I suspect that in today's corporate world it's not that unusual. Paying staff for reading and responding to letters from customers is expensive.

> I often wonder why they bother with their stores anymore.

I'm assuming (with full knowledge of what that word really means) that their stores are still profitable -- just not selling electronic components.

> A faux news service the Onion may be, but they hit the nail right on the
> head with that article.

Frankly, Radio Shack has always been a source that I used only when I needed something *now* and was willing to pay a stiff premium to have it in hand. For me, now that they stock less and less of the stuff that falls into that category, they're less and less useful. But don't forget that we are not their only customer segment, and probably have never been their most profitable one. Markets change and the stores serving those markets have to change too . . . or die . . . or both.

The BoD has to quit thinking of QST as a magazine and start treating
it like the club newsletter. That may mean raising club dues to
support a newsletter which serves all the various segments of the club
population.

When I became a ham back in 1967, ARRL sponsored the following
contests that were reported in QST:

Field Day
SS (CW)
SS (Phone)
DX (CW)
DX (Phone)
VHF SS (4 per year)
Novice Roundup

10 per year

Today, ARRL sponsors:

Field Day
SS (CW)
SS (Phone)
DX (CW)
DX (Phone)
VHF SS (4 per year)
School Club Roundup (2 per year)

UHF Contest
RTTY Roundup
10 Meter Contest
160 Meter Contest
10 GHz & Up Contest
IARU Contest

17 per year

All that a complaint amounts to is a form of member input.
Should the BoD ignore member input?
>
> Will these same complaints "about how much web server space is being
> used" cause similar cuts there?

Please don't give the anti-contest folks ideas.

There's still a considerable amount of space devoted to each contest,
and some contests (like FD) get full line scores.

What bothers me about contest coverage in QST is two things:
Lopsidedness and impermanence.

For example, in SS, there's detailed reporting of top scores, who won
what plaque, etc. But the little guy - the rest of the pack, so to
speak - is not recorded. Yet it is the little guys who make the big
scores possible! Seeing one's score - high or low - in QST is one way
to increase participation.

As for permanence, I can look up scores all the way back to the very
first SS and FD simply by pulling the appropriate QST off the shelf.
Those without a library like mine can use the CDs. But for recent
scores, I am dependent on the impermanent website.

It seems to me that it's worth the space to publish all the scores,
even if they are printed very small.

> Three of the groups which comprise the core membership of the ARRL

(DEVIL'S ADVOCATE MODE = ON)

Yes, but how many of them send in a contest log? Say, for SS - 2000
logs out of 125,000 members?

(DEVIL'S ADVOCATE MODE = OFF)

> Yet, in recent decisions the BoD has stripped contest line scores,

Pardon me for disagreeing with a moderator, but I don't quite see the necessity for sounding any hue and cry about some alleged statement in an alleged Internet news site. Is the "Onion" a reputable journalistic
organization or just a refined, fancy web log?

As far as I've observed in my limited time of 60 years since first starting to tinker with electronics (including radios), Tandy Radio Shack was primarily a consumer electronics retailer, not necessarily just for tinkerers and experimenters. Radio Shack (without the Tandy prefix) continues today in that same general market area, not the best, not the cheapest, not the one with the most of anything in electronics, consumer or otherwise. They seem to be convenient for the consumer of any kind of consumer electronics.

>Dear Mr. Day,

>minutes from my house.)

The closest Radio Shack to my house is about a quarter of an hour away in a mini-mall across from a giant Ralphs food market where my

wife and I shop every week. I've never timed it. That Radio Shack used
to be next to the Burbank HRO store (which moved away to a major
street elsewhere in Burbank, a location with now-miserable parking).
There's two other Burbank, CA, Radio Shack outlets, one at a corner
location in downtown Burbank and the other in the three-story indoor
Mall built about 10 years ago. They hang on despite obvious competition
in consumer electronics from Fry's, a huge supermarket of electronics
(over three dozen checkout stations) next to Bob Hope Airport...and the
PC Club on Victory Blvd in a mini-mall with an OSH do-it-yourself chain
store and a Toys R Us store (among several). Burbank has a population
of about 110K folks. If I need some kind of part in a hurry, I would go to
Electronic City, also in Burbank for as long as I lived just across the city
border in L.A., 44 years. There are at least 5 other parts sellers in a 15
mile driving distance for me. Of course, this San Fernando Valley area
has a population of between 1 to 1.5 million in a city that once had a
major industry of aerospace-electronics.

Tandy Radio Shack was once a major player in the personal computer
market with their TRS-80, then the short-lived "Color Computer" or
"CoCo."
It was a major player in home music systems back when "Hi-Fi" was the
popular phrase, before "stereo" as a generic term was in vogue. Radio
Shack still sells those...and cell phones and wired and cordless phones
and a host of other consumer electronics, including a variety of radios.
Broadcast band and scanner radios, mostly. In many consumer electronics
items, they have competition from Office Depot and Office Max. :-)

Back when I first got interested in electronics (1947) the number of places
for "radio parts" were limited to a local store, H&H Electronics on
Kishwaukee Street, one of the partners being Gene Hubbell (ex-W9ERU,
later W7DI and SK in the southwest), or "Allied Radio," the big mail-
order place in Chicago 90 miles away. By 1956 there was one more
store in my home town, smaller than H&H. Mail-order was the way to
go back then in northern Illinois in a city of 80K population.

>Maybe you need to research your market a little more, and the lack of
>understanding of your company which you bemoan in the "Onion"
>interview can be reversed.

Hmmm...one reason why I doubt the veracity of this "Onion" article is that Radio Shack has an obvious presence in the consumer electronics market with periodic newspaper inserts and catalogs issued oftener than annually. I suspect they have long ago identified their market target and have managed to keep going without a significant percentage of sales to radio amateurs. The national population is about 300 million and the total number of amateur licensees is about 0.7 million (active licensees less than that).

>And, oh-by-the-way, hams talk to each other ..... it's what we
>do ..... what do you expect we're saying about Radio Shack corporate
>management about now?

Offhand, I'd say it would be the same disparaging words about them that I've heard often for the last four decades. :-) Despite the once-catchy title of Radio Shack (from ham origin of the 1920s and 1930s), I can't recall any specific push that Tandy or its successors ever made to enter the amateur radio market. AES and HRO plus other regional ham stores have that.

By the way, I don't think I can get some vital component needed to keep my radio "on the air" from the Burbank (or Van Nuys, CA) HRO store. Lots of ready-made boxes, antennas, coax, antenna wire, etc., yes but few switches, resistors, capacitors, or inductors. I don't know what the AES in Las Vegas, NV, has other than the same. [maybe lots of packing popcorn which I got a month ago in a shipment] Las Vegas has many other attractions besides electronics. :-)

I was unaware that WordPerfect had any "reader" or equivalent. :-)
My upgrade from WP 3.1 to WP 8 came about, I think, from some
bean-counter's mistake at a Fry's Electronics sale. For a mere $85
I got the "8" Upgrade plus "Dragon Naturally Speaking" (with nice
little
single-earphone and boom mike headset). One has to keep eyes and
ears and mind open for legitimate bargains...they don't happen often.

Yes! And there's no need to change/include other Operating Systems
on
a PC!

Linear Technology Corporation isn't all that involved with altruism.
Their
LTSpice was originally configured to simulate their switching power
supply
ICs in order to boost their sales of same. Its first name
was "SwitcherCAD." However, they did change their SPICE "envelope" to
allow drawing-listing-analyzing-simulating any kind of discrete-
component
circuit. Their schematic-drawing and auto-netlist creation is not one
of
intrinsic beauty but it works just as good as those pay-for-everything
SPICE packages. It can be used as an ARRL Radio Designer
replacement or equivalent. At no cost.

> Perhaps the old Tech license was a bit of a dead end?

I don't think so. The "old" Technician class which became "Technician
Plus" in 1991 did serve its purpose in 1990 and before. Of course the
Tech Plus was no longer issued as of 2000, but then neither were
Advanced and Novice.

The Novice class license was conceived, lobbied-for by those who
thought
U.S. Amateur Radio would always have morse code as it epitome of
skills
and all should "do their time" in the "apprenticeship" of old-style
operating
as if amateur radio was a union, guild or special craft occupation.
Of
course it wasn't, despite all the urging and PR to "begin at the
beginning
and work, work, work your way up" by some. :-(

The "old" Tech and the new Tech were specifically banished from HF
until
July of 2003 and the changes to S25 (nearly entire re-write) at
WRC-03.
They served their original purpose well enough, I think, which was to
open a class of license for true experimenters. What really happened

was that the Techs (both kinds) found they could be IN amateur radio
and
it wasn't burdened by all the old morse code requirements (de jure and
de
facto). Even with the antipathy of old-timers ("shack on a belt" type
of
remarks, etc.) the Techs did their own thing on VHF-UHF and found it
as
much or more fun than what they "were supposed to do" on HF.

It should be fairly obvious that Techs (both kinds) made up very, very
close
to half of all licensees in U.S. amateur radio prior to 23 February
2007. It
was the "entry" class for so many and many enjoyed that so much they
didn't all switch to other classes. All that while the original
"entry" class of
Novice licensees were dwindling.

In the last week I've received new catalogs from AES, HRO, Texas
Towers, MFJ in the mail. It's either a grand conspiracy of marketing
or just a lot of ham goodies being made and sold. :-)

I didn't know that new folks were "ill-mannerred." I've heard a lot
of old
folks say they were but, as one of the 'old folk' I have yet to see
that
for myself. :-)

Ahh....But suppose the Ham was the one who initiated the contact? That
wouldn't be a virtual reverse autopatch. It'd probably be considered the
same as a traditional phone patch akin to what many HF operators use.

But then again if the EchoLink admins won't allow it to take place during
the net, then this discussion is a moot point, now is it. :)

Cheers & 73 :D

10-15 years ago Radio Shack marketed a modest line of ham radio
transcievers.

The HTX-10 and HTX-100 were small HF rigs, they sold five or six
models of VHF/UHF handhelds, and three or four VHF/UHF "base"
transceivers.

This is truly not an exact science! The licencing qualifications
and expiry conditions have been quite dynamic.

Indeed. While I would presonally like my license to remain in
effect forever without renewal,(hehe) a shorter renewal cycle would be of
great utility in keeping track of how we are doing in retention of Hams.

Yes. I would venture that there is not much use in trying to pick
up anything from our numbers except from long term statistics (in spite
of my yapping about the success we are having in my area). on a weekly
basis, nothing real can be determined.

It doesn't seem analogous to me, so let me construct a model, so that
I can ask questions about that model.

In a traditional HF phone patch there are two licensed ham stations
involved. Station K1AAA calls station K0BBB in Denver and says
"Please patch me to my girlfriend. Her number is 303-555-1212."

K0BBB now dials up the g/f, connects her to his rig, and controls his
transmitter allowing her to talk (or not talk).

Where in Echolink is the equivalent of K0BBB controlling his
transmitter allowing the third party to speak, or more importantly,
cutting off the third party if they seem to be violating a rule?

Amateur Radio Newsline(tm) Report 1550 - April 27, 2007

Amateur Radio Newsline report number 1550 with a
release date of Friday, April 27th, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams down-under
prepare to face another BPL trial as radio
amateurs in the United States North East respond
as the skies open up. Find out the details on
Amateur Radio Newsline report number 1550 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIGHT: ANOTHER BPL TRIAL DOWN-UNDER

Another BPL trial has been announced in
Australia. If this one proves out it could grow
into one of the biggest access BPL installations
down-under and be a major problems for that
nations hams. Felix Scerri, VK4FUQ, is in New
South Whales not far from where the test will be run:

--

Full details have now emerged about the latest
BPL trial in Queanbeyan, NSW. The trial was
announced by Country Energy on the 15th March and
is expected to be operational for at least 6 months from May this year.

The BPL trial plans to pass 300 households in the
Queanbeyan CBD and Jerrabomberra areas, and will
provide both access broadband and electricity network management
information.

Freshtel will provide an Internet Telephony
service to participating customers who, in
addition to receiving a modem and access to the
broadband service, will receive a free Binatone
cordless phone and $30 per month of Freshtel call
credit. Country Energy have been "trialling" BPL
in Queanbeyan for several years using the older
generation 45Mb/s DS2 chipset based Mitsubitishi
equipment, producing emission levels
measured up to 55dB above the expected ambient

noise levels on the 7MHz amateur band. This new trial will use Schneider Electric (Ilevo) equipment using the later generation 200Mb/s chipset, as used in the Mt Beauty BPL trial.

Country Energy, which is owned by the NSW State Government, has around 195,000 kilometres of powerlines and 1.4 million power poles, and offers retail electricity in five states and territories. It employs more than 3,900 employees serving more than 870,000 customers.

I'm Felix, VK4FUQ

--

The results of this latest Australian BPL trial hopefully will be known by the end of the year. (WIA News)

**

RESCUE RADIO: THE GREAT NOR'EASTER OF APRIL 2007

The weekend of April 14th were a couple of dark days for the North East. That's when the worst rainstorm in over 100 years hit the tri-state area of New York, New Jersey, Connecticut and then worked its way up into New England. And in many cases hams associated with the Amateur Radio Emergency Service were called out as city's and towns prepared to face Mother Natures wrath. No place was the pre planning more apparent that in the New York City and Long Island areas. Mike Lisenco, N2YBB, is the areas Section Emergency Coordinator:

--

Lisenco: "At 8 a.m., New York City ARES was asked to staff 9 shelters. The District Emergency Coordinator for New York City, John Healy, KA2ABV, got in touch with his 5 Emergency Coordinators -- one for each Borough -- and within the city they were able to staff for the next 24 hours the 9 shelters. They actually put together a staff of about 30 people working in shifts throughout the day."

--

As the storm intensified, over 8 inches of rain fell in New York City. As luck would have it, the expected 50 mph wind gusts did not materialize and the danger to the City passed by midnight. At that time, New York City District ARES was able to stand down and secure.

In Nassau County New York the District Emergency Coordinator Jim Mezey, W2KFV. He said that Nassau ARES ramped up for the storm on with a check of its communication systems at the Nassau Red Cross Chapter. Members were asked to double check their equipment and make sure their "Go Bags" were ready. Rain totals were three to five inches in Nassau County and wind speeds estimates were up to 40 mph sustained with higher gusts. There was a good amount of coastal flooding causing roadway damage and many trees came down. There were also scattered power outages but normal communications were not interrupted.

But New Jersey and upstate New York were not as lucky. According to Lisenco, there was some fairly severe damage in those regions:

--

Lisenco: "Unfortunately, New Jersey and some of the counties in upstate New York were hit very hard with flooding. In fact a number of people were displaced in those regions and the (ham radio) operations was ongoing for a number of days."

--

Meantime, the ARRL Letter reports that in Massachusetts winds gusting between 60 and 75 MPH brought down trees and power lines, leaving some 45,000 customers without power. Trees and tree limbs also fell on cars and houses, in some instances causing significant damage.

During the storm, SKYWARN operations at the Taunton Ntional Weather Service office's WX1BOX, were active from 8 AM Sunday through midnight Tuesday. The SKYWARN team provided some 500 to 600 reports of snowfall, rainfall, flooding, wind damage and wind-speed measurements. More than a dozen repeaters served as formal and informal SKYWARN gathering spots.

Meantime, at the Massachusetts State Emergency Operations Center, RACES' was activated from 6 PM Sunday through 7 PM Monday. Mot only were they monitoring the storm but the Boston Marathon as well. That race went on despite the rough weather with over 200 Amateur Radio volunteers deployed to keep it moving along. Even as Eastern Massachusetts ARES went on standby to support storm related operations.

Similar support operations were also reported in portions of Connecticut, New Hampshire and

adjoining states. (NYC ARES, ARRL, ARNewsline(tm))

**

HAM RADIO IN SPACE: KE7KDP RETURNS TO EARTH

Space tourist Charles Simonyi, KE7KDP, and two members of the Expedition 14 crew have returned to Earth. Dr. Simonyi along with Expedition 14 Commander Michael Lopez-Alegria, KE5GTK, and Flight Engineer Mikhail Tyurin, RZ3FT, landed safely southwest of Karaganda in Kazakhstan at 8:31 a.m. Eastern Daylight Time on Saturday, April 21st.

The world's fifth space tourist paid around $25 million for pre-flight training and his scheduled 14 day stay on the International Space Station. During his time on-orbit he took to the airwaves using the NA1SS station and made numerous individual and school contacts like these:

--

Actual Contact Audio - Hear it in the audio version of this newscast downloadable at www.arnewsline.org

--

The return to Earth of the Expedition 14 crew members was originally scheduled for Friday, April 20th. Inclement weather at the primary landing site meant the date and location had to be changed. This effectively gave KE7KDP a free extra day in space.

After landing, KE7KDP was quoted as saying that it had been a terrific trip and that he felt fine. Russian space chief Anatoly Perminov echoed those remarks by saying that all three of the returning space travelers were feeling well but Dr. Simonyi clearly feels the best of all. Welcome home. (ARNewsline and various published reports.)

**

HAM RADIO IN SPACE: ISS AUTOMATIC PACKET REMAINS IN LIMBO

The automated ham radio packet system on board the International Space Station will remain in a state of limbo for a while longer. The ARISS control team had been hopeful that space tourist Charles Simonyi, KE7KDP, would have been able to restore the Kenwood radio system to full functionality after an accidental reprogramming of the radio occurred near the end of Expedition 13.

To accomplish this, the ARISS team worked with the Simonyi people to get him prepared to perform the Kenwood reprogramming. Unfortunately, a few weeks before the launch it was learned that additional software certification steps were required to allow the reprogramming software to be used on the I-SS computers. This certification was completed only a few days before KE7KDP returned from space. As a result, there was insufficient time for him to complete the restoration.

The ARISS team says that at this point in time, it appears as if a full restoration will require a concerted effort with full cooperation from the Russian and US space agencies. This will likely take several months to accomplish. In the meantime, requests for some investigative analysis by the crew will be made. This will enable the ARISS team to determine if the radio can be partially restored to provide some of the unattended operations that it once provided. (ARISS)

REGULATORY NEWS: FCC PROPOSES TO LOWER THE VANITY CALL FEE

Some good news about license fees courtesy of the ARRL. It reports that the FCC has proposed reducing the regulatory fee to obtain or retain an Amateur Radio vanity call sign by more than 40 percent starting later this year.

In a Notice of Proposed Rule Making released April 18th, the Commission is proposing to cut the fee from its current $20.80 to $11.70. If ultimately adopted, that would mark the lowest fee in the history of the current vanity call sign program.

The actual designation of the proposal is titled "Assessment and Collection of Regulatory Fees for Fiscal Year 2007." In it, the FCC proposes to collect a total nearly $290.3 million

in Fiscal Year 2007 from all of its combined regulatory fees. (ARRL)

**

ENFORCEMENT: UNLICENSED TAMPA BROADCASTER FINED $10000

Turning to enforcement news, the FCC has fined Jean-Harry Pierre-Francois $10,000 for operating an unlicensed broadcast transmitter in the Tampa, Florida area. Back on February 13th the Commission's Tampa Office of the Enforcement Bureau issued Pierre-Francois a Notice of Apparent Liability for Forfeiture in the amount of $10,000. Pierre-Francois never filed a response to the N-A-L. The FCC has now affirmed the forfeiture making it a fine that has to be paid within 30 days of the April 23rd release date unless Pierre-Francois decides to file an appeal. (FCC)

**

RESCUE RADIO: IARU EMCOMMS PRESENTATION AVAILABLE ON THE WEB

A report developed by the Regional Conference on Disaster Relief and Management is now available for on-line viewing. The Power Point presentation is from an address given by the IARU Region 1 Emergency Communications Coordinator Seppo Sisatto, OH1VR.

The conference was held April 14th to thr 16th in Alexandria, Egypt. The report is on-line at www.iaru-1.org/Alexandria%20presentation.ppt (IARU Region 1 News via Southgate News)

RADIO LAW: COMPANY SUES FCC IN BID TO LEGALIZE SALE OF FREQUENCY JAMMERS

Cell Antenna Corporation, of Florida has filed suit against the FCC claiming rules that prohibit the sale of radio frequency jamming devices to state and local governments impair first responders' ability to fight terrorism. The suit, filed in the US District Court of the Southern District of Florida challenges a law enforced by the Federal Communications Commission to prohibit the use of cellular and radio frequency jamming equipment by state and local governments.

Cell Antenna argues that several sections of the Communications Act of 1934 violate the 14th amendment of the Constitution and conflict with both the public interest and the wishes of

Congress. Additionally, the suit claims that the FCC rules put at risk the lives of first responders and the public in the event of a terrorist attack using a remote controlled improvised explosive device.

In support of its argument, Cell Antenna claims that with increasing regularity, insurgent groups in Iraq and terrorist cells abroad have begun to turn to cellular-triggered explosives as a means of attacking civilian and military targets. The company says that the FCC is responsible for the commercial licensing of radio waves, and should not be responsible for the determination of whether state and local officials can use technology to fight terrorism.

It should be noted that one of Cell Antennas primary products is signal jamming devices that are sold to federal government agencies throughout the world. The complete press release detailing this law suit is on line at http://cellantenna.com/pressreleases/CellAntenna-FCC4.pdf (CGC, Cell Antenna Website)

**

ON THE AIR: HAM RADIO INVITED ON CROSS COUNTRY PATRIOTIC RIDE

A 15-day Patriotic Ride Across America is being planned as part of the May 2007 National Military Appreciation Month. Organizers would like Amateur Radio support for communications along the route.

The 6000 mile round trip ride begins on May 20th in Sacramento, California and goes cross country to Washington D.C. before returning to the California state capital. More information is on-line at www.nmam.org. Just click on the Capital Ride Across America graphic at the top of the page.

Also, as reported last week, the next "Ham It Up For The Troops" operating event takes on May 26, beginning at 9 a.m. Eastern time . Its also a part of National Military Appreciation Month but sponsored by the Amateur Radio Military Appreciation Day organization.

ARMAD as it is better known has conducted this special event for the past three years. It's primary purpose is to let those that sacrifice know that we support them. More about ARMAD and the "Ham It Up For The Troops" event is on line at www.armad.net (ARMAD)

**

NAMES IN THE NEWS: NEW MANAGING EDITOR AT RADCOM

Some names in the news. First to the United Kingdom where Giles Read, G1MFG, has been named Managing Editor of Radio Communications Magazine. He succeeds Alex Kearns who left the magazine back in January.

Read previously served as Rad Com's Technical Editor. In his new position, G1MFG will be responsible for overall editorial control and technical content of the monthly U-K publication.

The RSGB which publishes Rad Com has also announced that Tracey Treanor has joined the staff. She is taking on the job in bringing to members the most up to date news as well as in-depth features. (GB2RS)

**

NAMES IN THE NEWS: ASTRONAUT BILL MC ARTHUR TO BE AT HAMVENTION 2007

Back on this side of the Atlantic, the Dayton Hamvention and ARRL have announced that Space shuttle veteran and International Space Station Expedition 12 commander Bill McArthur, KC5ACR, will be attending the 2007 Dayton Hamvention.

McArthur will be the League's guest Hamvention. He will first be the featured speaker during a private ARRL reception on Thursday, May 17th. He will be on hand all day Friday, May 18th to greet and talk with visitors to ARRL EXPO 2007 area at the Hamvention.

Hamvention 2007 takes place May 18th to the 20th at Hara Arena near Dayton, Ohio. More about the event and what's happening this year is on-line at www.hamvention.org. (Dayton Hamvention, ARRL)

**

NAMES IN THE NEWS: SAARO TURNS 20 IN MAY

And congratulations to the Salem Area Amateur Radio Operators club of Salem, Ohio, which celebrates its 20th anniversary in May. The group describes itself as an association of radio amateurs organized for the promotion of amateur radio communication and experimentation that provides communications during disasters, emergencies and community events.

The club has about 30 members from Salem and the surrounding area. It is usually in attendance at large public functions like parades and works with the Patriotic Society on Memorial Day. The

club has assisted in many emergency operations over the years, and has gained national recognition as a Special Service Club. It's well-known for its 24-foot long red trailer that appears during emergencies and emergency drills throughout the area. (SalemNews.net)

**

BREAK 2

Thirty years and still going. From the United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

RADIO NEEDED: HAM RADIO STILL DOMINANT

Radio in general is still one of the most dominant form of communication despite major technological advancements. This, according to the International Amateur Radio Union.

Commenting, Graham Hartlett, ZS6GJH, of the South African Radio League notes that despite the internet and cellular phones, Amateur Radio continues to attract people world-wide. Hartlet says that it does this by providing free international communications and friendships and because ham radio does not need pre-established supporting infrastructure that all other services do. (SARL)

**

EMERGING TECHNOLOGY: ELSEEMORE HELPS BLIND OPS USE ECHOLINK

Australia's NERG News reports a program called ElseeMore - EchoLink for Blind Operators has been developed by Tony Wakefield, VK3ZTR. This program assists Blind and Visually Impaired radio amateurs in operating the popular EchoLink Internet linking program.

Normally EchoLink requires the use of the keyboard and mouse, and the ability to read menus and text displays. ElseeMore is simplifying the user interface. Large screen fonts and simplified text displays can be used by partially sighted operators, while voice prompts are use by totally blind operators to navigate through the

EchoLink controls. Amnd best of all, ElseeMore can be configured by either locally or over the Internet so that the blind operator can easily access pre-set favorite EchoLink nodes.

According to its developer, ElseeMore the program has been quite popular not only with blind operators but also operators having 20-20 vision. They find the large font display and speech announcements are great for monitoring operations from across a room. More is on-line at www.tonywakefield.com.au (WIA News)

EMERGING TECHNOLOGY: OUT-OF-THIS-WORLD INTERNET ACCESS

The U.S. Department of Defense has named Intelsat General Corp. to proceed with initial testing of what is expected to lead to Internet Routing in Space. In early 2009, a space-hardened Cisco router will be launched into geostationary orbit to support the voice, data and video needs of the armed forces, first responders, and others who need seamless and instant communications. You can read more about it at www.telecomweb.com/tnd/22650.html (CGC)

HAM RADIO IN SPACE: AMSAT-NA SPACE SYMPOSIUM IN PITTSBURG OCT 26 - 28

The 2007 AMSAT-NA Space Symposium will be held at the Pittsburgh Airport Marriott Hotel from October 26 through the 28th. This years keynote speaker is Sy Liebergot, a former NASA spaceflight controller and part of the team that guided Apollo 13 back to Earth following the explosion which crippled the spacecraft.

AMSAT is also focusing efforts to attract local middle and high school students to the Saturday sessions by providing special programs. As part of this there will be a fully operational satellite station on site for demonstrations and use.

This years symposium is being hosted by the Wireless Association of South Hills Amateur Radio Club. More information is on-line on the symposium page at www.amsat.org (AMSAT)

**

WORLDBEAT - AUSTRALIA: 6 METER BEACON BACK ON AIR

In nrews from around the worls, word that the Australian 6 meter propagation beacon on 50.295 MHz is back on air. This, with a 10 watt horizontally polarized omni-directional CW signal.

The VK3RMH beacon was established to provide signals to indicate band openings to and across V-K land. It also provides signals necessary for receiver alignment of stations within its local groundwave coverage area. (WIA News)

**

WORLDBEAT - CHINA: THE INTERLOPERS ARE BACK

If you are trying to hold a QSO on the 17 meter band and you are suddenly trampled by two shortwave stations fighting one another then you have been jammed by a pair of broadcasters vying for the minds of the people of China. More accurately, one is trying to express its views to listeners in the Peoples Republic of China while the other is trying to jam it out. No matter as neither the "Sound of Hope" which broadcasts from Taiwan nor the music station jamming it from the city of Hainan are supposed to be on 18.160 MHz nor anywhere in the Amateur exclusive world wide 18 MHz allocation. But they are and its not the first time that either has showed up in an Amateur Radio allocation. And while several nations Intruder Watch operations have logged the stations and complaints have been filed, it remains to be seen if anything can be done to chase the interlopers away. (RN, Listener E-Mail)

**

ON THE AIR: THE IARU REGION 1 EMCOMM PARTY - MAY 5

On the air, word that Region 1 of the International Amateur Radio Union will be sponsoring its second EmCom Party on the Air on Sunday May 5th. The IARU says that this is not a contest but an emergency communications exercise. The aim for participants is to contact I-A-R-U Region 1 headquarters station OF3F in Finland and also as many other national HQ and emergency communication group stations as possible using SSB. The information gathered will give the sponsor a good idea as to range and accessibility of stations in the region.

The event runs from 11.00 to 15.00 UTC on the 40, 20 and 15 meter bands. More information on the exercise can be obtained at www.raynet-hf.net. (GB2RS)

**

DX

In D-X, the international N8S DXpedition to
Swains Island led by Hrane Miloshevic,YT1AD of
Serbia and David Collingham, K3LP of the USA, is
over. Radio Bulgaria reports that racked up a a
record breaking 117,205 QSO's by operating around
the clock on all bands from April 3rd to the
15th. QSL cards is due to start after May
15th. Direct QSL's require a self-addressed
return envelope and proper funds to cover return
postage. Those go to Hrane Miloshevic, YT1AD,
36206 Vitanovac, Serbia. QSL's sent via the bureau require only your card.

On the air, keep your ears open for DL9MWG active
from Malta as 9H3RT through May 11th. Activity
will be on HF mainly using CW. QSL to DL9MWG at his callbook address.

Last but by no means least, word that DS4DRE, is
currently active slash 4 from Hong Island.
Activity will be on 80 to 10 meters on CW and
SSB. He plans to be there until June 30th. QSL as directed on the air.

(Above from various DX news outlets)

HAM HAPPENINGS: ITS T-HUNT TIME

And finally this week, as the weather warms up,
it's time to think about taking ham radio
outside. Newsline's Joe Moell K0OV tells about
some opportunities for foxhunting fun in the coming months.

--

It's going to be a busy spring and summer for
fans of hidden transmitter hunting. May 12 and
13 is the annual CQ Worldwide Foxhunting
Weekend. You may have heard me call it the
National Foxhunting Weekend before, but the name
has changed because it's become an international
event. Fans of direction-finding contests will
take to the roads and to the forest to track down
hidden transmitters on two meters, and other
bands too, in cars and on foot. Start planning a
Foxhunting Weekend activity for your club. You
can get some ideas by reading about it in the
April and May issues of CQ Magazine.

Then a week later, a very special foxhunting
event takes place at Sinclair Park in Dayton on
the Sunday of Hamvention 2007. This will be the

first ARDF event just for the blind to be held in the USA. It's being put on by the OH-KY-IN Amateur Radio Club, headed up by Dick Arnett WB4SUV and Bob Frey WA6EZV. Anyone who is blind or sight-impaired can participate; no ham radio license is required. How can one walk or run through a park to find radio transmitters without being able to see? Go to OH-KY-IN's special Web site to find out. The URL is www.ardfusa.com

While you're at the Hamvention, be sure to take in the Foxhunt Forum, which will be Saturday at 1145 hours in Room 5 of Hara Arena.

The big finish for 2007 foxhunting activity will be the ARDF Championships of the USA and IARU Region 2, which will be September 14 through 16 in the forest near South Lake Tahoe, California. That's near the Nevada border in the Sierras. The championships are open to anyone of any age, and even if you've never done this sort of thing before, it's a chance to learn from the best. Registration will open soon. Read all about it, and other foxhunting news, at www.homingin.com. Spell HOMINGIN as one word.

From southern California, this is Joe Moell K-zero-Oscar-Vicror for Amateur Radio Newsline.

--

Again, Joes website is www.homingin.com. (K0OV, ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Two reminders before we go. First about our on-line poll regarding your position on the concept of Regulation by Bandwidth. To take

part, take your web browser
to www.arnewsline.org. Scroll down and watch for
the word "Polls" on the left hand side of the
page. Then click on the box that is closest to
your view. As soon as you cast your vote you will see the current results.

Also, the nominating season for this years
Amateur Radio Newsline Young Ham of the Year
Award is now open. Any radio amateur age 18 or
younger residing in all 50 United States, plus
Puerto Rico and all 13 Canadian Provinces can
qualify. Full details and nominating forms are
on our special website at www,yhoty.org. Also
see the Vertex-Standard sponsored ad on page 8
of the March issue of QST Magazine.

And this final word. It was 1,550 weeks ago, in
the summer of 1977 that the Amateur Radio
Newsline was born. That was almost 30 years ago
and back then, we called ourselves the Westlink
Radio Network with our very first newscast
dedicated to reporting on repeater
deregulation. That was a hot topic back then and
there have been hundreds if not thousands of hot
topics since. And as we end our third decade of
service and head toward our fourth, we want to
pause for a moment and say thanks to all of you
who have listed to us all these years and who
have given us the financial support so that we can continue.

In reality, you are just as important as any of
us because without you the listener, we would
have no reason to exist. And as we say goodbye
for this week we renew our pledge first made 30
years ago to do our best to bring you the most
timely and up to date information that you need
to be a modern day radio amateur.

For now, with Bill Pasternak, WA6ITF, at the
editors desk, I'm Jim Davis, W2JKD, saying 73
from all of us here at the Amateur Radio Newsline
and we thank you for listening.

Amateur Radio Newsline(tm) is Copyright 2007. All rights reserved.

There was a time when you could get a renewal almost any time in the
license term if some other change was happening, like an upgrade or an
address change. From 1967 to 1983, even though the license term was 5
years, I only renewed once, because of all the upgrades and address
changes I made in that time.

> > It is also important to know the details of what is included in the

Yes, but too often those making a statement can neglect to note what
is included in their totals.

That says (to me) that a lot of newer folks are more interestd in
upgrading.

> I would venture that there is not much use in trying to pick

The success in your area is simply one data point you have observed.
You're not saying it's a widespread trend, just that it's what you
have observed.

The day-to-day variations are so large that it will clearly be some
time before a long term trend is clear.

IMHO, what we're really seeing is a whole bunch of trends overlapping
each other.

I didn't mean to start a fight here, but I have a thought about all of this.

Don't couch your communications to the ARRL as a complaint; couch it in terms of work direction. They are, after all, our hired hands.

They don't call FD a 'contest', they call it 'a readiness exercise'
which escapes the BoD ban on QST-reported line scores.

>
> All that a complaint amounts to is a form of member input.
> Should the BoD ignore member input?

Not exactly ignoring the input, IMO. In the PAQSO party, I get a lot of advice/complaints/feedback on many issues. If there is a decision to be made, I'll make it, but I'm not ignoring the input of those members that disagreed with my decision.

What is more likely is that there was a convenience or advantage to listening to the membership that complained about the results. Get rid of that part of the printing, and presumably save a few dollars.

>> Will these same complaints "about how much web server space is being
>> used" cause similar cuts there?
>
> Please don't give the anti-contest folks ideas.

The amount of web space is pretty minimal, although I suspec that part of the issue is TIC..

What I want is printing in the magazine, publication on the website, and an Excel file too on the website. My major access would be on the web, but there is nothing like the printed medium for access, and as you note, permanence.

> It seems to me that it's worth the space to publish all the scores,

>
> Yes, but how many of them send in a contest log? Say, for SS - 2000
> logs out of 125,000 members?

It's a good question, Devil's advocate or not. The answer comes in two parts:
First, how many members do any single activity that QST reports on? Moonbounce, homebrewing, antique radio, you get the point. Yet all those make a nice addition to articles and reports in the magazine.

Second, If 2000 logs were sent in, you can bet there were a lot more participants. In the PAQSO party, I can estimate that there is up to twice as many participant as those who send in their logs. We can get this from call signs that appear in multiple logs, yet don't have a log sent in. It seems to increase the sunspot cycle wanes, and propagation is not as good, so some of the folks think their score is too low to warrant sending in a log.

The RS HTX 252 is a nice simple and small mobile VHF rig that I like to let the new folks use for Public service.

And their 2 meter HT's are classics. Many of our club members still use theirs on a daily basis. They sold approximately 1 gazillion of them. ;^)

I've been 'googling' for a MININEC-based antenna modeling program (or programs) and I've decided a guy could get old and grey before he was through looking at all the offerings. I've kind of (based on web page descriptions) compiled a short list of candidates as follows:

MMANA by JH3HHT
EZNEC by W7EL
NEC-Win Pro by Nitanny Scientific

Is anyone here using any of those, especially NEC-Win Plus? Can anyone recommend one that they KNOW is better than the ones on my list? I have $450 budgeted for this but I might consider something a little costlier if it were overwhelmingly better.

I haven't heard of MMANA before but I've used Roy Lewallen's EZNEC
and the trial version of NEC-Win by Nitanny Scientific. The latter
two
are about as overwhelming as one can get, I think. :-)

I use EZNEC+,and quite like it. It lets me do a few things that the
free version won't, such as build helical models easily. The number
of segments per model in the free version is only 20, IIRC, where my
purchased version lets me have either 500 or 1500. The differences in
the results are quite small for every model I've built, whether I use
a large number of segments or a smaller number.

I'd like to hear about MMANA and NEC-Win Pro.

Does anyone have any experience of the path and repeater coverage software
UKW Tools?

How can I save a map with coverage plot into an emailable format?

cheers
Jack VK2CJC / MM0AXL

764. 2m FM calling practices

Newsgroup: rec.radio.amateur.moderated
Date: 2007-04-28 00:56:10 UTC
From: Ivor Jones <ivor@despammed.invalid>
Message-ID: <59fh2aF2jt4sdU1@mid.individual.net>
Source record: 4669

Hi All,

I don't know about Stateside, but as an active 2m FM operator here in the UK I've noticed an increase in a rather annoying (to me, anyway) practice when calling CQ.

I know the frequencies are different in the bandplans, but here we use 145.5 as an FM calling channel, then once contact is established, move to a working frequency.

Several times recently I've heard people calling CQ and I've been all ready to return the call, but then they say that they will be listening on a totally different channel, presumably the one they used on the previous call.

This is all very well, but how do they know that the frequency they've chosen is free at my end as well as theirs..? If they're anything more than a few miles away, the channel they're listening on might well be busy my end and as a result I wouldn't be able to return the call.

Why does this practice seem to be on the increase..? Is it happening in the US and elsewhere as well, or is it a purely British phenomenon..?

ARRL WITHDRAWS "REGULATION BY BANDWIDTH" PETITION, PLANS TO REFILE

The ARRL has withdrawn its controversial November 2005 Petition for
Rule
Making (RM-11306)
<http://www.arrl.org/announce/regulatory/rm-11306/RM-11306-
asFiled.pdf>
calling on the FCC to establish a regulatory regime to segment bands
by
necessary bandwidth rather than by emission mode. The League cited
"widespread misconceptions" surrounding the petition as a primary
reason for
deciding to remove it from FCC consideration. The ARRL left open the
option
of refiling the same or a similar petition in the future, however.

Look into 4NEC2. It is free. I believe to a large extent, the differences in the programs are the way you input antenna parameters and the way the results are displayed but the output is the same because they use the same calculating engine.
4NEC2 come with a bunch of antennas already modeled that you can play with to get familiar with the program. I have made many models of antennas myself, and getting quite a collection of antennas that are of interest to me. I don't know about the other programs but I can tell you that I have spent dozens of hours learning and experimenting with my 4NEC2 and still have a lot to learn but when I finally learned about "cards" (from reading the generic documentation) then things began to make a lot of sense.
It even has 3D displays but I haven't gotten that far yet !!

==>ARRL WITHDRAWS "REGULATION BY BANDWIDTH" PETITION, PLANS TO REFILE

The ARRL has withdrawn its controversial November 2005 Petition for Rule
Making (RM-11306)
<http://www.arrl.org/announce/regulatory/rm-11306/RM-11306-asFiled.pdf>
calling on the FCC to establish a regulatory regime to segment bands by
necessary bandwidth rather than by emission mode. The League cited
"widespread misconceptions" surrounding the petition as a primary reason for
deciding to remove it from FCC consideration. The ARRL left open the option
```

of refiling the same or a similar petition in the future, however.

"The withdrawal of the petition will permit a full discussion and consideration of options at the July 2007 meeting of the ARRL Board of Directors," said ARRL President Joel Harrison, W5ZN. "The petition then can be recast with a better explanation of its scope and the reasons for the proposed changes."

The ARRL Executive Committee recommended withdrawing the petition when it met by teleconference April 10. The ARRL Board of Directors subsequently okayed the EC's recommendation by mail vote.

The ARRL Board continues to support the concept of regulation by maximum emission bandwidth as a way to facilitate the eventual transition from analog to digital communication modes. ARRL CEO David Sumner, K1ZZ, emphasized that the League seeks a regulatory framework that's "fully compatible with both narrowband and wideband analog emission modes now in common use" on the ham bands.

Sumner expressed the hope that a refiled regulation-by-bandwidth petition would "address -- and hopefully avoid -- widespread misconceptions" about RM-11306, either in its original form or as amended earlier this year. Irrespective of the present controversy over the petition's proposals, he pointed out, the League repeatedly sought comment on its regulation-by-bandwidth concepts before filing its petition with the FCC.

The ARRL first sounded out the Amateur Radio community regarding regulation-by-bandwidth three years ago. A September 2004 "It Seems to Us . . ." QST editorial "Regulation by Bandwidth" followed, explaining the concept and its rationale. Hundreds of subsequent comments from ARRL members and others "helped to bring the issues on which the amateur community was not in agreement into focus."

That led to a second editorial, "Narrowing the Bandwidth Issues," in April 2005 QST, soliciting additional comments on the plan's most contentious points. That drew hundreds more constructive and critical comments, and the ARRL took all input into account in developing a draft petition for the Board's consideration. The ARRL filed the petition in November 2005, and the FCC put it on public notice in January 2006.

In all, the amateur community has posted upward of 1000 comments on RM-11306. While some comments appropriately reflected concerns about the proposed substantial shift in regulatory philosophy, others tended to reflect a lack of understanding of existing rules, of the ARRL's proposals, or both. Some expressed the view that the League was attempting to promote or legitimize particular data modes, such as Winlink.

"The petition, in fact, had nothing specifically to do with Winlink or any other particular data mode," Sumner maintains. "It was, rather, a means of facilitating data experimentation, which is somewhat stifled under the current rules" that apply almost exclusively to analog modes.

A major distraction in the public debate related to automatically controlled data stations, and assertions that adopting the League's petition would permit such facilities to run roughshod over CW and other traditional modes. Sumner says automatic control is not even an essential component of the League's regulation-by-bandwidth proposals, which would leave in place restrictions on automatically controlled stations.

Revisions to RM-11306 the ARRL filed earlier this year to accommodate changes in Part 97 that occurred since November 2005 only seemed to generate additional controversy and lead to further confusion, Sumner concedes. Those revisions would have largely confined regulation by bandwidth to the VHF and UHF bands.

One misunderstanding resulting from an unintentional editorial error in the League's revisions gave rise to concerns that the ARRL's proposed 3 kHz bandwidth limitation for data emissions represented an expansion of the currently permitted maximum bandwidth. Quite the contrary, Sumner explains.

"In fact, 3 kHz bandwidth would have been a new limitation, because the present baud rate limit applies to individual carriers," he said. "Therefore, for emissions such as OFDM [orthogonal frequency-division multiplexing], which use multiple carriers, there is no effective bandwidth limit in the HF bands now." Sumner notes that under current rules, a single OFDM signal could conceivably -- and legally -- occupy an entire HF band.

Harrison assured that the League intends to offer a "far better explanation" of the consequences of regulation by bandwidth before filing a new petition proposing that regulatory concept, "so that the misunderstandings that occurred with respect to RM-11306 do not happen again."

==>APPLICATION SURGE CONTINUES UNDER NEW AMATEUR RULES

It's been just a little more than two months since the FCC dropped the requirement that Amateur Radio applicants pass a Morse code test to earn operating privileges below 30 MHz. While the initial avalanche of applications immediately following February 23, when the no-Morse testing regime went into effect, has abated somewhat, business remains brisk for the ARRL Volunteer Examiner Coordinator staff.

"It's slowing down a little bit, but it's still substantially above what we usually see," observed ARRL VEC Manager Maria Somma, AB1FM. She estimated that new Amateur Radio applications were up by 35 percent, while upgrade applications were up by 150 percent over last year's volume.

In a typical pre-February 23 week, Somma said, ARRL VEC would receive paperwork from approximately 115 test sessions. "It's on the order of 150 to 200 sessions per week now!" she exclaimed. Somma and ARRL VEC staffers concurred that applications were roughly evenly split between newcomers and upgraders. She said she's also seen a spike in the number of applications from General and higher class radio amateurs to serve as volunteer examiners.

To satisfy his own curiosity, ARRL member Tommy Gober, N5DUX, compiled some FCC statistics on the number of new Technician, General and Extra licensees

before and after the Morse code requirement was deleted. His numbers show the FCC issued nearly 700 more Amateur Extra, 3625 more General and 454 more Technician licenses in March 2007 than in the same month last year.

Figures from ARRL member and ham radio statistician Joe Speroni, AH0A, indicate the total number of Amateur Extra licensees is up 1649 from March 2006 to March 2007, while the General population grew by 2668. The total number of Technician licensees dropped by 1632 during the same period, however -- and it continues to drop going into April.

Speroni's figures also show that the grand total of Amateur Radio station licenses has declined by more than 12,800 over the past two years -- to 655,048 at the end of March.

The still-heavy volume has stretched the amount of time it takes for an application to proceed from examination session to license grant. "I think we're looking at eight to ten days from the test date," Somma allowed. By and large, those on the waiting end have been patient and understanding, she added.

A staff of seven full-time and three part-time employees handle the "incoming" from Amateur Radio exam sessions across the US and from other sites where US Amateur Radio examinations are administered through ARRL VEC.

There's no light at the end of the tunnel just yet. Somma and her staff are looking ahead to 450 examination sessions registered for May, another 400 in June and 320 apiece during July and August. And summer is "the slow season," she remarked. Another 900 test sessions already are on the calendar for the rest of 2007.

==>ARRL URGES SUPPORT FOR EDUCATION AND TECHNOLOGY PROGRAM

The ARRL is encouraging members to invest in Amateur Radio's future generation by supporting the Education and Technology Program (ETP) <http://www.arrl.org/FandES/tbp/>. Begun in 2000 simply as "The Big Project" under the inspiration of then-President (now President Emeritus) Jim Haynie, W5JBP, the ETP has expanded to some 250 participating schools across the US and sponsors free Teachers Institutes each summer for educators. The program is funded solely through contributions. ARRL Chief Development Officer Mary Hobart, K1MMH, describes the ETP as the cornerstone of the League's efforts to introduce a new generation to ham radio.

"ARRL is doing lots of great things in education for Amateur Radio, but the ETP is the foundation of our future," Hobart says. "I wish every ARRL member could sit in a classroom as students discover the magic of wireless technology, or sit in on one day of the Teachers Institute as teachers unravel the mysteries of weather, space, robotics and ham radio -- and how they are interwoven -- to open up a whole new world for kids. It's magical and inspiring!"

Mark Spencer, WA8SME, coordinates the ETP. The program provides participating schools with a turnkey Amateur Radio station and a complete wireless technology curriculum at no cost. Many youngsters at ETP grant

schools have obtained Amateur Radio licenses, although that's not a primary program goal. Hobart says hundreds of students and their teachers have become radio amateurs, forming school clubs and getting on the air for such events as the annual School Club Round-Up.

Hobart predicts, recent changes in the requirements to obtain an Amateur Radio license will spark even more interest.

"We are poised to add thousands of new hams to our service -- many of them young people who are just discovering the magic of wireless communication," she said.

Hobart notes the recent appointment of Debra Johnson, K1DMJ, as the League's new Education Services Manager as further evidence of ARRL's commitment to inspiring and educating the generations of radio amateurs yet to come. The ETP will sponsor four Teachers Institutes this year, and contributions help keep this free educational service alive.

"Youngsters who benefit from the generosity of your donations may follow in the footsteps of hams who found a future in electronics, communications, computers and the sciences," she says. "Without the contributions of ARRL members, the Education and Technology Program would not be a reality."

"Contributions by June 30 will place Amateur Radio in more schools and train more teachers in 2007," Hobart says.

Visit the secure ARRL Development Office Web site <https://www.arrl.org/forms/development/donations/education/2007/> to donate. For more information, contact Hobart via e-mail <mhobart@arrl.org> or call 860-594-0397.

==>AMATEUR RADIO PARTICIPATES IN 2007 NATIONAL HURRICANE CONFERENCE

Amateur Radio had a seat at the table during the 29th National Hurricane Conference, April 2-6 in New Orleans. The annual gathering, which serves as "the nation's forum for education and professional training in hurricane preparedness," featured Amateur Radio's role in severe weather situations. More than 2500 government, industry, military, and volunteers attended this year's gathering. The Hurricane Watch Net (HWN), WX4NHC -- the Amateur Radio station at the National Hurricane Center -- and ARRL collaborated to present a training session at the conference on April 3.

"This gave Amateur Radio operators and several representatives of the ARRL Field Organization leadership a chance to discuss their experiences and lessons learned during recent hurricane seasons -- especially Hurricanes Katrina and Rita that affected so much of the Gulf Coast in 2005," said ARRL HQ's Field Organization Team Leader Steve Ewald, WV1X, who moderated the forum.

Among the presenters was Alabama Section Manager Greg Sarratt, W4OZK.

"The Amateur Radio presentations were very successful. Amateurs from several different areas of disaster experience spoke about what Amateur Radio experienced and has done to be better prepared for the next large disaster,"

Sarratt observed. "Attendees listened intently and posed very good questions." He said attendees reviewed ARRL enhancements and the work and recommendations of the National Emergency Response Planning Committee (NERPC).

New Orleans ARRL Emergency Coordinator Joel Colman, NO5FD, explained how their experiences during and after Hurricane Katrina have led to an even better working relationship with the Orleans Parish Fire Department. Amateur Radio operators are now setting up a ham radio station at the fire department's communications facility, and they are offering Amateur Radio license classes for 911 operators and others.

In other presentations:

* Cedric Walker, K5CFW, an ARRL Technical Specialist from New Orleans and active ARES member, discussed the close relationship that has developed between Amateur Radio operators with their communication skills and Flotilla 45 of the US Coast Guard Auxiliary.

* Tom Hammack, W4WLF, a District Emergency Coordinator from Gulfport, presented his first-hand perspective of Amateur Radio emergency support during and after Hurricane Katrina along the Mississippi Gulf Coast.

* Gary Stratton, K5GLS, ARRL Louisiana Section Emergency Coordinator, recounted the stories of those many days and weeks after Hurricanes Katrina and Rita and how they have led to several lessons learned with regard to message handling, served agency relationships, and contact with other sections for mutual assistance.

Sarratt assessed the 2007 National Hurricane Conference as a very informative event. "This conference is a must-attend event for all EmComm leadership!" he said.

==>FIRST GOLDFARB SCHOLARSHIP RECIPIENT WINS RESEARCH FELLOWSHIP

ARRL member Ben Schupack, NW7DX, the first-ever recipient of the prestigious ARRL Foundation William R. Goldfarb Memorial Scholarship, has won a $120,000 graduate research fellowship from the National Science Foundation (NSF). The stipend will enable Schupack, a senior at Whitman College in Walla Walla, Washington, to undertake three years' of research in Iceland and Greenland. Schupack says that he's planning to take Amateur Radio gear along when he heads into the field.

"My graduate studies will not involve radio directly, but I will continue my involvement on the air, and I anticipate bringing along radio equipment to my proposed field sites in Iceland and Greenland," he told ARRL.

A geology and environmental studies major, Schupack, 22, plans to attend the University of Colorado -- Boulder in the fall, where he will be working within the Institute of Arctic and Alpine Research (INSTAAR). His research will focus on the interaction between volcanic eruptions and Arctic climate variability, and he expects to undertake ice-core and lake-core field work in Iceland and Greenland.

Schupack says he believes Amateur Radio played a role in his getting the NSF award, which typically goes to graduate students. In one application essay, Schupack mentioned his interest in Amateur Radio and the infinite questions that stem from studying Earth sciences. "The atmosphere, geomagnetic variations and solar conditions are among just a few of the many threads that help unravel Earth's history and predict future dynamics," he explained.

He also says his background in electronics and ham radio has come in handy on countless occasions, from installing remote solar panels to measuring battery discharge cycles and interpreting ground-penetrating radar surveys.

In addition to his scholarly endeavors, Schupack is lead trombonist in Whitman's jazz band, and he's a member of the school's award-winning cycling team. Last year Schupack took part in a semester abroad program in tropical marine ecology with the School for Field Studies in the Turks & Caicos Islands.

The Goldfarb award is the result of a generous endowment from the late William Goldfarb, N2ITP. For more information about ARRL scholarships, visit the ARRL Foundation scholarships Web page <http://www.arrlf.org/programs/scholarship>. -- some information from Whitman College

==>SOLAR UPDATE

Solar flash Tad "I Live for the Sun" Cook, K7RA, Seattle, Washington, reports: Sunspots have reappeared over the past few days after six days of nothing. So far in April we've seen 18 days with zero spots, but a large sunspot, Number 953, now is rolling into view. A solar wind stream also is expected to hit Earth, causing a geomagnetic upset on Saturday, April 28.

The Australian Space Forecast Centre predicts quiet-to-unsettled conditions April 27, active-to-minor storm conditions April 28, and active conditions April 29. The US Air Force predicts the planetary A index from April 27 through May 1 at 5, 25, 15, 10 and 8. Similar predictions from Geophysical Institute Prague give us quiet conditions April 27, active April 28, unsettled to active April 29, unsettled April 30, quiet to unsettled May 1, and back to quiet May 2-3.

There's been a lot of news this week regarding the solar minimum and predicted solar maximum. On April 25, a Solar Cycle 24 Prediction Panel consisting of members from NOAA, NASA and other agencies looked at all available predictions, attempted to reach consensus and released a statement <http://www.sec.noaa.gov/SolarCycle/SC24/Statement_01.html>. It looks like the minimum between cycles 23 and 24 may not occur for another year, until March 2008, a year later than recently reported. The accuracy is expected to be plus or minus six months.

Sunspot numbers for April 19 through 25 were 0, 0, 0, 0, 0, 0 and 14, with a mean of 2. The 10.7 cm flux was 68.3, 68.5 68.7, 68.9, 69.1, 73.2, and 76.5, with a mean of 70.5. Estimated planetary A indices were 6, 3, 2, 10, 18, 4 and 5, with a mean of 6.9. Estimated mid-latitude A indices were 4, 2, 2, 8, 10, 5 and 4, with a mean of 5.

For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: The Florida and Nebraska QSO parties, the SP DX RTTY Contest and the Helvetia Contest are the April 28-29 weekend. JUST AHEAD: The AGCW QRP/QRP Party is May 1. The NCCC Sprint Ladder is May 4. The New England QSO Party, the MARAC County Hunter Contest (CW), the 10-10 International Spring Contest (CW), the Microwave Spring Sprint, the Seventh Call Area QSO Party, the NA High-Speed Meteor Scatter Spring Rally, the US IPARC Annual Contest (CW and SSB), the Portuguese Navy Day Contest (CW/SSB and PSK31), the Indiana QSO, the ARI International DX Contest, are the weekend of May 5-6. The RSGB 80-Meter Club Championship (SSB) is May 7. The ARS Spartan Sprint is May 8. The SKCC Sprint is May 9. See the ARRL Contest Branch page <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education course registration: Registration remains open through Sunday, May 6 , for these ARRL Certification and Continuing Education (CEC) program online courses beginning Friday, May 18: Amateur Radio Emergency Communications Level 2 (EC-002), Amateur Radio Emergency Communications Level 3 (EC-003R2), Antenna Modeling (EC-004), HF Digital Communications (EC-005), VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). These courses will also open for registration Friday, May 4, for classes beginning Friday, June 15. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the CCE Department <cce@arrl.org>.

* Rough seas slowing Scarborough Reef (BS7H) DXpedition team: The Scarborough Reef (BS7H) DXpedition team <http://www.scarboroughreef.com/> will not be hitting the airwaves quite as quickly as expected. Extremely rough seas were slowing the progress of their vessel and now estimates it will arrive on Scarborough Reef Sunday morning local time (UTC = local time minus 8 hours). At 0240 UTC on April 27, the team was located some 240 nautical miles northwest of Scarborough Reef and making less-than-expected progress. The sea has been rough since departure, and there has been no maritime mobile operation. The multinational team from the US, Europe and Asia says on its Web site that it's "poised and prepared to ensure that every DXer gets a chance to make a QSO with this rare entity." Headed by ARRL Pacific Division Director Bob Vallio, W6RGG, the crew left Hong Kong April 25. Under normal conditions, the voyage takes approximately two and a half days. Upon their arrival team members will immediately assemble gear, erect antennas and announce on the Web site when operations commence. The team plans to follow propagation forecasts as closely as possible and concentrate on the bands that should provide the highest productivity to the Americas and to Western Europe. Logs <http://www.scarboroughreef.com/srlog.html> will be available only after the DXpedition concludes and should be uploaded to Logbook of the World

<http://www.arrl.org/lotw> as well.

* International Marconi Day event is April 28: Special event stations will be on the air Saturday, April 28 (UTC), to mark International Marconi Day (IMD) <http://www.gb4imd.org.uk/>, a 24-hour Amateur Radio event comemorating the birth of wireless pioneer Guglielmo Marconi on April 25, 1874. Participants can qualify for awards by making contacts on 160 through 10 meters (CW, SSB and digital) with designated IMD stations operating on or near a site where Marconi carried out experiments or where Marconi equipment was used prior to his death in 1937. The sponsoring Cornish Radio Amateur Club (CRAC) will operate GB4IMD from Pendennis Castle, Falmouth, Cornwall. Additional IMD stations will be on the air from the UK, the US, Canada, South America, Australia and Europe. The IMD Web site has a list of IMD 2007 award stations <http://www.gb4imd.org.uk/awardstns.htm>.

* Clandestine broadcaster, jamming station back in Amateur Radio band: ARRL Monitoring System/Intruder Watch Liaison Chuck Skolaut, K0BOG, confirms reports that a clandestine broadcaster and a jamming station again are competing on 18.160 MHz. The 17-meter band is a worldwide exclusive Amateur Radio allocation. Following up on reports, Skolaut says he's able to hear the "Sound of Hope" broadcast station from Taiwan as well as the so-called "Fire Dragon" jammer, broadcasting music from Hainan, Peoples' Republic of China, at ARRL Headquarters station W1HQ. The Sound of Hope transmits news unfavorable to the PRC, while the Hainan music transmissions attempt to block the transmission, pausing for four minutes each hour, apparently to check the frequency. The result is a mess! Skolaut has received reports about the clandestine broadcaster and music jammer interference from all over the US as well as Europe, Africa and the UK. IARU Monitoring System Region 1 Coordinator Wolf Hadel, DK2OM, in Germany has documented the intruders on 18.160 MHz (and others) on his Web site <http://www.iarums-r1.org/iarums/latest.pdf>.

* ARRL greets radio amateurs, visitors at broadcasters' convention: The ARRL had a presence at the National Association of Broadcasters (NAB) Convention, April 14-19 in Las Vegas. The gathering annually attracts more than 100,000 broadcasting and electronic media industry representatives. Las Vegas volunteer Stan Perkins, W7SLP, ARRL Pacific Division Director Bob Vallio, W6RGG, and others from near and far staffed the League's exhibit to inform attendees about Amateur Radio's service to the public. The NAB generously provided space for the League's booth, which attracted hams and non-hams alike. Several visitors expressed an interest in becoming licensed -- or re-licensed. One ham discovered that his license was about to lapse the next day. ARRL representatives directed him to the FCC booth, where his ticket was renewed on the spot. Audio guru Bob Heil, K9EID, of Heil Sound Ltd sponsored the popular Wednesday evening ham radio reception, which featured entertainment, refreshments and an array of great door prizes. While Thursday is usually a slow day, the ARRL booth remained a beehive of activity when the folks from NOAA brought along "Sprockit," an intelligent robot to discuss Amateur Radio and its contribution to SKYWARN and other public service activities, Perkins said. The ARRL thanks all NAB volunteers for contributing their time to make the League's booth a success.

* Hawaii moonbounce a hit: Bruce Clark, K0YW, operating as KH7X from the station of Alex Benton, KH6YY, made the first successful 2.3 GHz EME (Earth-Moon-Earth) contact from Hawaii April 23 (UTC). "This is the first time EME from Hawaii has been worked on this band," reports Ron Hashiro, AH6RH, who assisted in the effort. Clark made contact with well-known VHF/UHF and moonbounce enthusiast Al Ward, W5LUA, in Texas. Hashiro says the Hawaii operation was set up in a tent pitched next to the 12-foot TV receive-only (TVRO) dish used for the antenna, in order to minimize feed line losses. "The CW signal was just above the noise level and sounded 'watery,' as if the speaker were being held underwater," Hashiro reported. "The warbling tone was much worse than Arctic flutter." He said Doppler shift was on the order of 3 kHz. CW was sent at about 10 WPM. K0YW made additional contacts with several other stations on 2.3 GHz as well as on 1.2 GHz EME, Hashiro said. News of Clark's temporary Hawaii moonbounce setup made the April 21 edition of the Honolulu Advertiser <http://the.honoluluadvertiser.com/article/2007/Apr/21/ln/FP704210343.html>. In addition to Benton and Hashiro, others assisting in the moonbounce experiment included KH6ND, KH7U, WH6GS and AH6NF.

* High-altitude balloon to carry Amateur Radio payloads: ARBONET-2, a high-altitude balloon carrying an Amateur Radio payload, is set to launch Saturday, May 5, at 9 AM CDT (1400 UTC), from Red River County Airport in Clarksville, Texas. An unfavorable weather forecast led sponsors to reschedule the launch date from April 28. Using the call sign K5FRC, the "Amateur Radio Balloons over North East Texas" flight will carry a crossband repeater (445.800 MHz up/147.560 MHz down), APRS (144.390 MHz) and a homing and data beacon (145.560 MHz). A 10-meter CW beacon on 28.061 MHz will identify as K5RWK. The ARBONET-2 flight is being dedicated to long-time Amateur Radio high-altitude balloon enthusiast Kim R. Miles, N9IS, who died March 27. He was a prominent member of the Central Indiana Windtrax organization with more than 30 high-altitude balloon flight operations to his credit. A launch net (K5FRC) will commence at 8:30 AM CDT (1130 UTC) and continue until recovery on 7.260 MHz (plus or minus QRM). The flight is expected to last about two hours. The ARBONET team requests reception reports to the ARBONET Web site <http://www.arbonet.net/>. A commemorative QSL card will be available for those submitting reports.

* NEAR-Fest to continue "Hosstraders" tradition in New England: The New England Amateur Radio Festival ("NEAR-Fest") will take place Friday and Saturday, May 4-5, at the Deerfield, New Hampshire, Fairgrounds, Route 43 approximately 15 miles northeast of Manchester. NEAR-Fest will continue the tradition begun years ago by the now-discontinued "Hosstraders Tailgate Swapfest" -- a New England tradition for more than 30 years. NEAR-Fest will take place spring and fall at the original Hosstraders location. Gates open Friday at 9 AM. Tickets are $10 per person ($5 after 3 PM Friday) and $10 per vehicle into the flea market. Commercial vendors will also be on site. There are no sellers' fees or space limitations, and there's ample free parking outside the flea market. There's no charge for camping, but RV hookups (power and water) are $30. Check the NEAR-Fest Web site <http://www.near-fest.com/> for additional information and updates.

* Satgate System to QRT: AMSAT-NA reports that after many years of forwarding packet messages via UO-22, GO-32 and AO-51 the Satgate System will go silent. The total of 35 worldwide stations in the system a few years ago has dwindled due to a lack of traffic, maintenance problems, change of location and operator attrition. The system originated with David Medley, KI6QE, and the driving force over the past several years has been Andrew Sellers, G8TZJ, who's credited with developing software to permit Satgate stations to be fully automated. -- AMSAT News Service

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

769. Where can a guy buy electronic components?

Newsgroup: rec.radio.amateur.moderated
Date: 2007-04-28 06:25:54 UTC
From: George <gmwemail-dsp@yahoo.com>
Message-ID: <lrBYh.6054$rO7.3980@newssvr25.news.prodigy.net>
Source record: 4674

Used to be that components were readily available in electronics parts stores. Most of these stores have closed now.

Last week I needed to buy an electrolytic capacitor. Los Angeles, population zillions, has no electronics stores anywhere near me. But I found some caps - in a local Radio Shack. Their entire supply of components was in one DRAWER in the back of their store, well out of sight of shoppers. Good thing that I wasn't picky about the value or voltage rating!

Radio Shack sells plenty of computer-related stuff. But where's their RADIO-related stuff?

> when calling CQ.

That practise has been used for many years in the UK. On 27MHz SSB.

It is an effective method on a band which is so busy that establishing a contact long enough to QSY is difficult. But you are quite right, its a poor practise for 2m FM.

But then, where I am the 2m FM simplex frequency is so seldom used that when a contact is made, we don't QSY, in the hope someone else may hear us and join in :o)

Yup. That's because there wasn't enough demand for parts to keep them open. The demand went away because:

1) Electronics became more reliable and less expensive, so the repair demand went way down
2) Building your own became a niche activity, so the homebrew demand went down
3) Mail order and online suppliers took what was left.

Digi-Key, Mouser, Allied, Newark, Radio Daze, Play Things Of The Past, Dan's Small Parts, and many more places. All have great websites. Most will send you a free catalog, too.

(insert standard no-connection disclaimer HERE)

--

It's not just radio that has undergone such changes.

Last Saturday afternoon I had to deal with a clothes dryer that was making a horrible noise. Turned out it needed a new blower wheel. (Oddly enough, it's a Maytag). Unfortunately, I didn't have one in the spare-parts inventory.

Googled the part number and found an exact replacement online. $13 and change for the part, $4 for shipping. Ordered it online, part arrived on Tuesday, dryer was back in service the same day. Took only a few minutes online to do the whole thing.

I could have searched all over the area for the part, but there was no guarantee I'd find it, nor for a competitive price, because the dryer isn't a current model or even a recent model. And the appliance supply

places are closed Saturday afternoons and Sundays, so the soonest I could have looked was Monday. Even if I found the part, there would be the cost of transportation, sales tax, and time to find and get it.

772. WIANEWS for week commencing April 29 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-04-28 12:18:45 UTC
From: nationalnews@wia.org.au
Message-ID: <200704281000.I3SA0BQ27402@panix2.panix.com>
Source record: 4677
Cross-posted to: rec.radio.amateur.moderated,aus.radio.amateur.misc,rec.radio.info

This is WIANEWS for week commencing April 29 2007

The WIA AGM weekend of activities is all set to kick off next weekend the 4th to the 6th of May. Enthusiasm and registrations for each of the weekend events have well and truly outstripping the expectations of the event organizing committee, Phil Wait, Robert Broomhead and WIA secretary Ken Fuller.

It was some weeks ago that we announced on this broadcast that places for both the astronomical society meeting and the telescope tours had reached (and had infact exceeded) capacity. This week as registrations for the Saturday BBQ and AGM dinner are finalised, we take a moment to look at a brand new award, an award which will be presented for the very first time this year at the AGM in Parkes.

It is the Chris Jones Award...

Here's WIA director Robert Broomhead VK3KRB with details..

The award is to honour the memory of Chris Jones VK2DD, who contributed so much to the advancement of amateur radio and the Wireless Institute of Australia and whose unfailing commitment and vision led to the formation of the national Wireless Institute of Australia.

It is to be awarded to radio amateurs who have made an exceptional contribution to amateur radio and the Wireless Institute of Australia and will be presented this year for the very first time at this years AGM in Parkes.

The award will not necessarily be made every year.

The award will be a handsome glass trophy. The Chris Jones Award honours the memory of a man who was dedicated to the advancement of amateur radio and whose commitment and vision led to a new WIA and whose unfailing courtesy and genuine friendliness is fondly remembered by all who knew him.

The first award will be given this year and has been decided by the WIA Board. The recipient will be announced at the Open Forum following the Annual General Meeting in Parkes, New South Wales, on 5 May 2007.

Last week we spoke to our pedestrian mobile station VK4XJJ Jeff who in raising funds and awareness for the deafdumb is walking from Port Augusta in VK5 to Kurrumba in VK4

Well WIA Broadcaster Terry VK4AAT of 160 meter AM fame is just one of many who have worked Jeff VK4XJJ on 7050-7060 at 5:30pm AEST with a 57 signal

into Brisbane from his 5w backpack.

Donations can be sent via the address in this weeks bulletin, so come on let's get behind this great cause

www.dbansw.org.au

GENERAL INTEREST NEWS FROM 'DOWNUNDER'.

Final stage in place to allow a limited evaluation of mobile telephone services on board a commercial aircraft

The Australian Communications and Media Authority has enabled a limited evaluation of GSM mobile phones and GPRS devices on a commercial aircraft.

The evaluation - which is limited to one aircraft for up to 12 months - will be conducted by Qantas. It will be one of the first implementations of this kind of service in the world.

The evaluation will be conducted on one Qantas passenger aircraft operating only on domestic Australian routes. Qantas has decided to commence the evaluation with email and text only, disabling voice services. ACMA and other government bodies will consider the potential for permanent regulatory arrangements for the service once the results of the evaluation are known.

(Media contact: Donald Robertson, ACMA Media Manager)

AMATEUR RADIO - HOME OF THE GOOD GUYS

CHUBB TO THE RESCUE.

Mr. Peter Sellwood, Portable Service Manager for CHUBB Australasia recently advised the NERG that he and CHUBB would donate 4 knapsack style fire extinguishers for N.E.R.G. use, such as when the club members "go bush" for Amateur radio exercise.

They will be available for both the club's and individuals usage.

The knapsack extinguishers will become part of the clubs safety equipment for future field days (just in case their Big Yeller 6kW generator starts a grass fire!).

Good one CHUBB.

BPL INTERFERENCE - THE BATTLE CONTINUES

VK7News SAYS Sceptical N.Y. Utilities Study BPL for Smart Grid Applications

The following summary is drawn from an article by Dinesh Kumar from the internet e-zine "Warren's Washington Internet Daily, Volume 8; Issue 66 on 6 April 2007.

BPL may not see all smooth sailing even when it comes to duty in automated meter reading and remote control of home appliances, judging from filings to the New York Public Service Commission (PSC).

The BPL industry is banking on heightened regulatory focus in Congress and state emphasis on energy conservation and better grid management to get "risk-averse" utilities to adopt the technology to improve grid efficiencies and maintenance. In response to the N.Y. PSC's advanced meter reading order, major power utilities seemed reluctant in filings to commit to BPL as the sole answer, and one rejected BPL because it's still evolving.

Consolidated Edison (ConEd) said it and many utilities are looking at BPL's suitability not only for high-speed Internet but also for electrical distribution asset monitoring, substation video surveillance, automated meter reading and the like. But BPL does have a "high level of uncertainty both in technical and total functionality" in ConEd's distribution grid, it added.

ConEd "eliminated" BPL from its "current business case" after deciding the technology is still developing and the "present costs of this communication infrastructure and the greater costs of BPL-related meters make this technology significantly more costly" than other automated meter methods.

(NYSEG) and Rochester Gas & Electric Corp. said full BPL deployment isn't a "viable communication solution" for their full service territories. But "utility-grade" BPL, which doesn't support streaming video, VoIP and some other services, would be useful and efficient in areas with fibre networks and high meter density, they said in a joint filing. BPL's advantage over wireless technologies is that it allows real-time 2-way communications between meters and the distribution system, it said. It also offers sufficient bandwidth and low latency to allow communications to equipment and appliances for real-time appliance control from a central location.

New radio event scores very well - The Centre Victoria RadioFest at Kyneton held last Sunday set a number of benchmarks for this type of event.

Many favourable comments were received from those who had previously attended amateur radio events and it attracted lots who were out to experience their very first.

No Victorian event had been mounted on such a scale and at large, yet mainly under-cover venue. One comment often heard was that people had smiles on their faces and the social atmosphere was great.

More than 550 attended on the day. In the opinion of the commercial traders it was "Australia's best organised event".

WIA President, Michael Owen VK3KI who helped man the WIA stand, described the RadioFest as "excellent" and congratulated the organisers on a job well done.

The top door prize from Vertex Standard Australia, a Yaesu FT857D transceiver was collected by Kevin Hughes VK3WN after his non-ham XYL Pearl, had the winning ticket.

A full report of the day can be read on the website radiofest.amateurradio.com.au

The Organising Committee, with representatives from Amateur Radio Victoria, Central Goldfields Amateur Radio Club and the Midland Amateur Radio Club, says "thank you" to the volunteers, traders, second-hand sellers, club corner participants, come 'n try activity providers, mini-lecture presenters and the many hundreds that attended and enjoyed the day.

I'm Bruce Lees VK3FFF and you're listening to VK1WIA.

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

GENERAL!

Radio and Electronics Association of Southern Tasmania

Intro to Standard Licence Sessions

http://reast.asn.au/events.php#Intro2StandardLicence

A reminder about our "Intro to the Standard Licence" sessions on a Saturday afternoons from 1:00 to 4:00pm in the Domain clubrooms.

These sessions are an introduction to the standard and advanced licences and will be structured into three distinct activities:

1-2pm Operating time - starting with a relaxing time - running the club station VK7OTC on 2metres R2 and 40metres around 7.065MHZ for that rare VK7OTC contact and QSL card. We may even play some digital modes on HF, VHF & UHF.

2-3pm Learning time - white boarding and demonstrating concepts and amateur radio problems that people bring along - eventually we see people bringing along a wish-list of problems, issues, ideas, concepts they would like explained including running through sample exam questions.

3-4pm Chill-out - wind down time, where attendees can do anything relating to amateur radio, continue with questions, playing ATV, operating VK7OTC, construction, testing, etc.

These sessions are there to provide an introduction and de-mystify the standard and advanced licences in preparation for the Standard licence training and assessment sessions that Reg VK7KK and Ian VK7QF are planning.

See you there.
(Ken VK7DY)

FUTURE EXAMS

Help amateur radio continue to grow

Do you know someone who could be interested in joining our hobby? Then encourage them to enrol in a Foundation Licence training course.

Next Foundation Licence course, and Standard / Advanced assessments .....

The CRARC will be undertaking another Foundation Licence course on the weekend 19th & 20th of MAY.
Also running Standard and Advanced Licence Examinations and Assessments on the Saturday (19th May) for those who wish to sit.

If you wish to sit either the examinations, or do the F.L. Course, please contact Alan Hawes VK1WX via email to education@vk1.wia.ampr.org or by phone (after hours) to 02 6258 2568. Please note that all monies are to be paid by May 7th 2007 !

In Victoria - the Ballarat Amateur Radio Group is now taking enrolments for its weekend training course and licence assessments on the 5th & 6th of May.
For more information please contact Craig Cook VK3CMC phone 5342 2448 or email vk3cmc@bigpond.com.au

At Bendigo classes and licence assessments are conducted by Ross Pittard VK3FCE who can be contacted via email vk3fce@internode.on.net

The Central Goldfields Amateur Radio Club, Maryborough regularly holds classes. Contact Peter Rafferty VK3CC on 5460 4387 or email majorca49@hotmail.com

On the Gold Coast and want to talk to the world through their IRLP and EchoLink systems? Or already licensed and wish to upgrade Foundation to Standard? Well classes are held at the Nerang Clubhouse of the GCARS, ring Roy VK4IG on 5539 3530 Exams can be taken at a time to suit you.

TARC WIA Exams Information
Exam sessions are held on demand
with WIA Assessors and assessment packs
available for all 3 levels of licensing.
Contact theTARCinc WIA Exams
Regional Co-ordinator Roger/VK4CD
on mobile 0417 638366 to have
a mutually suitable date and WIA
Assessors assigned to your assessment.

Further information also available at
theTARCinc website ...
http://www.tarc.org.au/tarcexam.htm

Adelaide Hills Amateur Radio Society will run Foundation licence's at the Aviation Museum, 56 Lipson Street Port Adelaide, 2 weekends August 4th and 5th then November 3rd and 4th.
Contact the course convenor, Sasi Nayar on 0417 858 547

VK6
Foundation course for May on the 19/20 with an exam on the 26th.
So if you want to do the foundation license in WA, get in quick,
as the 21st & 22nd of July's course (with exam on the 28th
of July) is already one third full.
The next VK6 Exams for Standard and Advanced, if you miss next weeks,
are on June 30th. Think ahead, book early! Contact Neil VK6BDO.

>From VK1WIA this is the National News Service -
Tune in today...Focus on Tomorrow

AROUND VK in 80 Seconds.

Hello I'm Justin VK7TW and we start in VK2 this week,

To Westlakes where their ARC's AGM happens Saturday 12th May
at 1.30pm in the club Library. Nomination for committee should
be in the hands of the Secretary by Saturday 5th May.
A buffet type finger food spread will follow the meeting.

VK4
The next issue of the Callbook is now being compiled and QTAC has been
requested to forward a listing of the VK4 Repeaters, Beacons & Digis for
inclusion in the 2008 Callbook.

To get the information as accurate & up to date as possible, QTAC would like
you to check out the info listed either in the 2007 Callbook or web site
and if any of the details need amendment, contact
qtac@wia.org.au

VK5
The South East Radio Group annual convention, which incorporates the
Australian Foxhunting Championships, will be held at the Scout Hall in
Mount Gambier SA, on the Queen's Birthday weekend, 9-10 June.
http://serg.mountgambier.org/
(vk5wcc for SERG, Mount Gambier. SA)

VK7
REAST's introduction to the standard and advance licence session on
Saturday afternoons has received some great interest over the last few
weeks. Last week we had 14 people come along to operate the club station,
participate in a question and answer session, white boarding problems and
demystifying the standard and advanced licences. This week we have a
practical PCB session - come along and see how to make a PCB from design
to drilling. See you there.

That's it from Hobart and Justin VK7TW, now back to our "action central
newsroom".

INTERNATIONAL NEWS

IARU
http://www.jarl.or.jp/iaru-r3/

IARU committee for common HAM license systems

The IARU Council is in the process of establishing an IARU exploratory committee for the purpose of investigating ways to progress a commonly adopted amateur license so that radio amateurs of one country are able to operate in another country without the need for a permit being issued by the administration of the country visited. It recognizes the importance of such arrangements for operation to the amateurs of the world and the need for amateurs to travel to other countries for the purpose of carrying out emergency communications.

Suggestions are now being looked at for a suitable person, well versed in the subject to head the committee.

==========

NEWS FROM ARNEWSLINE

COPPER 'THUGS' - COPPER THEFTS COST FOUR LIVES

Four people have been electrocuted in recent days after trying to steal copper cable that they apparently thought was not in use.

DesignLine.com reports that two New Hampshire men were buried last week after they were electrocuted while taking copper wire from an unoccupied power plant in Tyngsboro, Massachusetts. The bodies were found lying alongside bolt cutters and coils of copper wire. According to law enforcement authorities, the men did not have permission to be on the property.

Their deaths followed the electrocution fatalities in Arkansas of two people attempting to strip copper wire from utility poles. According to news reports, the price of copper has skyrocketed driven partially by the demand for copper for telecommunications transmission. One report says that the problem has gotten so out of hand that the Arkansas state government has passed three bills that crack down on the theft of scrap metal.

Despite continued upgrades to fibre optic systems, copper is still in heavy use for telecommunications systems, worldwide and the thieves know it.

MORE EINSTEIN LETTERS MADE PUBLIC BY CALTECH

The 10th volume of letters written by or sent to mathematics genius Albert Einstein have been made public under the auspices of the Einstein Papers Project at the California Institute of Technology." The Collected Papers of Albert Einstein - Volume 10" contains letters penned by Einstein between 1909 and 1920.

According to Caltech, the letters discuss many scientific issues, including his association with physicists in Europe and efforts to further confirm his theory of general relativity. But volume 10 also contains letters focusing on personal matters, such as the state of his marriage and his relationship with his sons. He also discusses the challenges he faced with his newly acquired celebrity status.

The volume was published for Caltech by Princeton University Press.
For more information, visit www.einstein.caltech.edu on the
World-Wide-Web.

DX

In D-X, the Swains Island N-8-S DX-pedition made over 115,000 contacts
before going Q-R-T on April 15th . An on-line log check is available
at www.yt1ad.info/n8s/log.html where you just put in your call to see
if you are verified as having worked the operation. Initial QSL cards
for N8S should be going out in about a month.

NEWS SOURCED TO THE RSGB NEWS SERVICE AND READ BY G4NJH FROM GB2RS NEWS

ISS contact from the Isle of Man

A British radio amateur who made contact with Charles Simonyi, KE7KDP, on
the International Space Station has been featured on BBC television.

Matty Cunningham, MD0MAN, was filmed for a report by Abbey Jones on
Northwest Tonight. The report featured amateur radio in a very positive
light and can be viewed online. There is also a report on the BBC web site.
Links to the video and report can be found on the RSGB web site.

ARI Marconi award

The Venice, Marconi section of the Italian radio amateur association, ARI, is
offering an award to mark the 70th anniversary of the passing away of
Guglielmo Marconi.

The award is open worldwide for contacting or listening to radio stations of
ARI Marconi Members.

To achieve the score for the award at least 20 points are needed.
Final results will be published in the ARI Magazine Radio Rivista
www.arimarcon.com.

European MF experiments

Since the beginning of 2005 the German telecommunication authorities have
licensed a propagation study experiment on medium wave MF.

The first license for an experimental station on 440 kHz +/- 100 Hz was
issued to Walter, DJ2LF under the callsign DI2AG.

In May 2006, Geri, DK8KW got the second license to operate under callsign
DI2BO at his home location in Peine near Hannover, locator JO52BH.

Early in 2007 the experimental radio licenses were extended to a second
frequency. Besides 440 kHz also 505.1 kHz +/- 100 Hz may now be used.

This frequency falls into the frequency range of the experimental radio
group with the callsign WD2XSH in the U.S.

Also, the Swedish authorities have issued one license for this frequency range. This frequency is also very close to the new UK amateur radio band 501 to 504 kHz which was issued recently on an experimental basis.

DI2BO currently transmits in QRSS3 interrupted by CW identification.

For the time being the beacon will remain on air continuously on 505.015 kHz.

Reception reports are welcome, either via DK8KW or direct. Correct reception reports will be confirmed by a special QSL card.

Grand plans for new DX country dropped

The Hutt River Province Principality announced two years ago plans to begin short-wave broadcasts and also seek amateur radio DXCC entity status.

Not heard of it? Well this self-proclaimed independent territory on Australia's mainland is located just north of Geraldton, Western Australia and began in 1970.

The Royal Amateur Radio Society was formed as a body to represent the interests of amateur radio on the Hutt River Province. It was full steam ahead seeking United Nations, IARU and ITU recognition.

Special Hotel Five prefix callsigns were being made available to inaugural members of the Royal Amateur Radio Society.

ARRL DXCC rules were being quoted as enabling the Principality to qualify for separate country status. DXers and Contesters were claimed to be eager to operate from Hutt River.

However today it is all but a memory, no mention is made on the Hutt River Province website of the former radio plans.

A source close to the ruler of the Hutt River Province, Prince Leonard, reveals he's gone totally cold on the radio ideas and is now very busy engineering a pyramid in his Principality.

I'm Jim Linton VK3PC and you're listening to VK1WIA.

SOUTHERN AFRICAN DX SURVEY

Which DX entities are most wanted by Southern African radio amateurs? How does the most wanted listing for Southern Africa look? Dennis, ZS4BS, has created a MS Excel spreadsheet containing the 2007 DXCC list and there is place where you can indicate which DXCC entities you need on CW, SSB or digital modes (RTTY, PSK, etc). The spreadsheet is available from Dennis, zs4bs@netactive.co.za or you can download it from the SARL web site at www.sarl.org.za. The closing date for the survey is 30th June 2007.

THE QNEWS WORK BENCH - the nuts and volts report -
(Measure twice - Cut once!)

ANTENNA NEWS

Fractal antenna the size of a rice grain, more has come to light since we first brought news of this many months back.

In press release on 6 March 2007 the Spanish wireless antenna company Fractus released a 2.4GHz fractal antenna that is the size of a grain rice. The following is a summary of the press release.

Fractus, the pioneer developer of fractal antenna technology, has set a new standard for antenna miniaturisation with the launch of its smallest antenna for the ISM 2.4GHz band.

The 3,7mm by 2mm Micro Reach Xtend antenna is the size of a single grain of rice, providing device designers with significantly more available space to enable new multimedia applications or reducing the space needed within devices.

The miniature antenna was designed using Fractus' patented fractal antenna technologies and developed especially for Bluetooth headsets and mobile handsets. It supports all standards working at the 2.4GHz ISM band, including Wi-Fi, and Bluetooth. Using fractal geometry with its extremely economical use of space, Fractus has created a solution that offers the maximum performance-to-space ratio as well as reduced costs.

REWIND - A LOOK BACK IN HISTORY
(Will McGhie VK6UU is WIA National Historian)

Radio Yesteryear is a group of volunteers dedicated to preserving the history of radio in Australia.

Current project is the history of early A.M. broadcasters from 1920 to 39.

During their research, it quickly became obvious that our early broadcasting industry was actually started by licensed amateur operators with experimental broadcast licenses. In addition, many of these early amateurs became the first engineers, and established most of the early commercial and A.B.C. stations.

Radio Yesteryea seek your cooperation in assisting them with information that you may have on these pioneering amateurs.

As their research is actually on broadcast stations, (bless their lil triodes) they have decided that amateurs

Must have held an Experimental Broadcast License.

Must have broadcast between 200 Khz and 1600 KHz.

Must have broadcast speech and music.

RadioYesterYear are especially keen to obtain a copy of an article entitled "50 Golden Years of Broadcasting in Australia: the Amateur Contribution".

Yours in nostalgia radio,
Bruce carty,
Honorary Chairman,
Radio Yesteryear Inc.,
2 Karoom Street,
Kariong, NSW, 2250.
Ph: 02-43401740.

Source record: 4678

It would help to know what you are trying to model.
The various packages have different strengths and weaknesses, and
can get wildly different results sometimes.

MMANA is based on Mini-NEC, is fast, pretty intuitive, and free.
But Mini-NEC has a lot of limitations when modeling some geometries.
Especially, the results of a ground mounted vertical antenna are totally
wrong (not a MMANA issue, but rather a miniNEC limitation). Since
it's free, you can play with it to get a feel for antenna modeling.

4NEC2 is a NEC2 based program. It has some nice user I/O features,
and is free, but the learning curve is (to me) a bit steeper than MMANA.
the NEC2 engine provides better accuracy that miniNEC in some cases.
The NEC2 engine suffers from significant ground-loss modeling issues.
4NEC2 allows using the NEC4 engine. You have to license NEC4 from
Lawrence Livermore Labs, but I think they have a low cost single-user
license now availaible ($250 if I recall correctly). The NEC4 engine is
a big upgrade to NEC2, and handles ground-losses a lot better. You can
model verticals and get something close to the right input impedance.

Many of the NEC2 based programs offer the ability to use NEC4 instead.

A lot of guys like Roy Lewellan's EZNEC software, and it gets consistently
good user feedback reports on the message boards. It's NEC2-based, but
the latest version offers NEC4 option.

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 29 APRIL 2007

You are listening to Amateur Radio Station ZS6SRL of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is broadcast every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. This broadcast can also be heard on Echolink by connecting to ZS6FCS. To listen to a web stream go to www.sarl.org.za, click on ARMI and follow the links. This, and previous bulletins, can be downloaded from the web site of the SARL i.e. www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

This transmission is by Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, 14,235 and 51,400 MHz as well as 438,825 MHz in the Pretoria area. (Other news readers please change to suit).

In the news today:

SIEMENS RADIO AMATEUR OF THE YEAR AND COMMUNITY SERVICE AWARD RECIPIENTS ANNOUNCED

EXAMINATION DETAILS AVAILABLE ON THE WEB

PRESIDENT'S NET AND INTECNET ON THE AIR NEXT SUNDAY

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

SIEMENS RADIO AMATEUR OF THE YEAR AND COMMUNITY SERVICE AWARD RECIPIENTS ANNOUNCED

The Board of the South African Amateur Radio Development Trust met last week to review the nominations for the various awards annually sponsored by Siemens.

As over the past few years not many nominations have been received for the Young Radio Amateur of the Year Award, the Board has therefore decided to change the award structure and from this year will present a Radio Amateur of the Year Award for Technical innovation and another award for the promotion and development of Amateur Radio.

The Siemens Radio Amateur of the Year Award for the promotion and development of Amateur Radio will be bestowed on Dave Reece, ZS1DFR, and the award for Technical Innovation will be presented to Hannes

Coetzee, ZS6BZP.

The Siemens Amateur Radio Community Service Award goes this year to Davy Smeda, ZR1FR. The awards will be presented at a gala lunch to be held in Midrand on 15 May 2007. Congratulations to the recipients.

EXAMINATION DETAILS AVAILABLE ON THE WEB

The examination details and examination numbers have been posted on the SARL web at www.sarl.org.za. Click on RAE down the left hand side column on the home page and when the page opens click on Candidate exam numbers. Letters will be mailed to individual candidates within the next few days.

DON'T LET YOU'RE MAIL GET LOST

Have you checked that the SARL has the correct mailing address details for you? Please look up your entry in the online call book on www.sarl.org.za and advise the office of any changes. Please also check that we have your correct email address as most of our correspondence will be sent by email. It is more reliable and less expenses than ordinary post.

The office is currently preparing the membership invoice for the 2007/2008 financial year and we would like to make sure the invoice reaches you in good time.

Changes to your email and postal addresses can be sent to admin@sarl.org.za or faxed to 088 011 675 2793. Please always use the full 13 digits.

PRESIDENT'S NET AND INTECNET ON THE AIR NEXT SUNDAY

The next President's net and Intecnet will be on the air next Sunday evening 6 May 2007. The President's net starts at 19:00 followed by the Intecnet at 20:00. Clubs are invited to apply for a link to the teleconference bridge. Simply send an Email by next Saturday to armi@sarl.org.za with the telephone number and details of the repeater to be connected.

The Intecnet will feature a discussion on the extensive linked repeater network covering the Eastern and Western Cape and parts of the Free State. The guest speaker will be Chris Scarr, ZS2AAW. The network is also the subject of an article in EngineerIT which can be read free online at www.eepublishers.co.za.

SARL OFFICE CLOSED ON 30 APRIL

The SARL office will be closed on Monday 30 April and reopen on Wednesday 2 May.

WHY BELONG TO THE SARL?

This question is so often heard. There are lots of good reasons, here is just one: "Representing amateurs in the legislative, regulatory and

administrative processes that affect us all locally, nationally and internationally".

DIVISION 6 BAND PLANNING COMMITTEE MEETING

The next meeting of the Division 6 Band Planning Committee will be held at the NARC from 09:00 - 12:00 on Saturday 5th May 2007. All clubs in the region are invited to send a representative.

For further information kindly contact Peter Hers, ZS6PHD, at 083 445 4634 or by email to zs6phd@mweb.co.za.

US COMPANY OFFERS WI-FI-PROOF PAINT

An American company says it has successfully tested wireless-blocking paint. EM-SEC Technologies, in a release (http://emsectechnologies.com/press_releases/press1.php) a few weeks ago, said its "Coating Solution", applied to a test facility, had successfully protected "wireless devices and other electronic equipment".

According to the company, "a one-time application of the coating creates an 'electromagnetic fortress' by preventing airborne hackers from intercepting signals".

EM-SEC reckons this would be useful for corporate offices, boardrooms, server and computer rooms, and R&D labs. It seems that wireless nets can be operated without trouble inside a painted building or room.

Products like this seem bound to find a wide market. Cinemas or theatres might use such tech to cut off mobile phones, avoiding the legal issues around jamming.

COMPETITION NEWS

ZS3 / ZS4 40 METRE SPRINT

On Sunday 6 May 2007, the ZS3/ZS4 40 Metre Sprint will be on the air. This is a fun activity to promote contacts between radio amateurs in the Northern Cape and Free State provinces and radio amateurs in Southern African countries. The Sprint runs from 16:00 to 17:00 CAT with phone, CW and PSK 31 activity. The exchange is RS(T) and province or country abbreviation, e.g. 59EC.

Contacts with stations in the Free State and Northern Cape count two points and a contact with ZS4BFN, ZS4SRK, ZS4B, ZS3ARK and ZS3FLY count five points. The rules can be found in the 2007 SARL Contest Manual and will be posted with HF Happenings during the week.

CLUB NEWS

The Centurion Radio Amateur Club held its AGM last Saturday, 21st April and the following members were elected to the committee:

Chairman - Gawie Basson, ZS6GJJ:

Vice Chairman - Pam Momberg, ZS6APT:

Secretary - Billy Strumpher, ZR6ATC:

Treasurer - Pam Momberg, ZS6APT. Many thanks to the retiring committee members for their services and congratulations and strength to the new committee members.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will continue at very low levels. The geomagnetic field is expected to range from unsettled to minor storm levels on 29 April. The expected Effective Sun Spot number for the coming week will be less than 10.

20 and 15 metre will provide best opportunities for DX. There is a possibility of 15 and 20 metre openings towards India from about 06:00 and again at 13:00 CAT. Conditions are going to be challenging towards Australia. From about 15:00, there may be good 10, 15 and 20 m openings towards Europe. Contacts to the USA are going to be very challenging. For the CW and digital enthusiasts it may also be worth monitoring 10 MHz.

Although the predictions may not be too enthusiatic, HF always has the capability to surprise you. You will never know what you are missing unless you switch on your rig, listen and also call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

27 April to 1 May - ZS3FLY, with the Land Cruiser Club at Boegeoebergdam, on the air also ZS1 Amateur Radio Club active from Verneukpan; 28 to 30 April - ZS3ARK active with the Voortrekkers at Lohatla; 5 May - Cape Town ARC Flea Market and also the West Rand Radio Club Flea Market; 6 May - ZS3/ZS4 40 Metre Sprint and President's Net and Intechnet; 15 May - Closing date for applications for Itchen Valley bursaries; 30 June - Closing date for updating of SA DX Survey.

SARL News depends on clubs and individuals for news items of importance and interest to radio amateurs. The one and only way to ensure that your contribution will reach the SARL News team, is to place it in www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date. It will be appreciated if you will do it in both Afrikaans and English.

The SARL also invites all listeners to listen to the program Amateur Radio Mirror International this Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 695 kHz. Audio is also streamed on www.zs6mrk.org and on Echolink from ZS6FCS as for this bulletin. A repeat transmission takes place on Mondays at 21:00 on 3 215 kHz. Telkom and Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

You have been listening to a news bulletin by the South African Radio League, which was compiled by George, ZS6NE.

A prosperous week to all, 73.

/EX

Here in the colonies our equivalent simplex calling QRG is 146.52. It is largely vacant and in most cases a QSO initiated there stays there as there's hardly ever a queue to use the channel.

As a related issue, K0CKB and I spend a lot of our free time traveling in an RV. When we bought the coach I had a sign-maker cut me a vinyl decal "K0HB & K0CKB 146.52". I have this decal on the rear of the coach at eye-level to a following driver, and we religiously monitor that channel. With over 16,000 miles on the odometer, the majority of it on major highways, so far we've had precisely one station call us.

FM simplex isn't widely used here. In fact 2M itself is pretty vacant --- even in a fairly large metropolitan area like St Paul/Minneapolis you could shoot off a cannon on 2M and not hit anyone most of the time.

I and the OM were driving along a freeway on a trip through Virginia and a vehicle passed us that had ham antennas. He stuck his arm out the window and signaled 5 2. So we assumed he meant 146.52, switched to that frequency and had a nice little chit chat.

I've lived in the Greater Los Angeles area since November, 1956. That area is (very roughly) 40 by 80 miles, includes 80+ incorporated cities,
with a population of (very approximately) 8 million. It was a center for
aerospace of the USA with many large electronics corporations. The entertainment industry is now tops with aerospace in second place due to several large corporations moving to other states or just relocating other places in the state.

To live in this area requires transportation, most convenient being a personal car. "L.A." is known for founding the "hot rod" and custom cars activities since the end of WWII. I find it most strange that anyone
involved in any electronics and who lives in L.A. thinking that "radio stores" are just minutes away from wherever they lived; it wasn't that way a half century ago and, strangely, it has improved in that time! We, that is, those who live here, think of distances in driving time, not
driving distance. Within a half hour's driving time, probably 20 minutes
in non-rush traffic, I know of at least a dozen "stores" that sell components for electronics, plus a dozen more distributors that will sell small quantities of components "over-the-counter" or by mail-order.
With FedEx, "the Big Brown Truck" (UPS), USPS, and DHL delivery services available, quick at lowest shipping rates, mail-order over the
Internet is a snap. We get at least two different telephone books plus
some smaller regional area ones for one area code for "Yellow Pages" hunting. I choose mail-order delivery right to my door for convenience.
No problems from CA, NV, WA, NY, RI, MA, MS, OR, AZ, IL, MN distributors/dealers/manufacturers shipping that way.

Those of us who've been in the design engineering work know very well that electronics is no longer, has not been since the start of WWII, just involved in "radio." Components alone have increased in ratings and case types at least two orders of magnitude in a half century, NOT counting SMDs. Electrolytics (capacitors) are now seldom made in the "high voltage" ratings of vacuum tube days; there's no demand for them late into this solid-state electronics era, seldom in the types that were long-ago familiar.

As an example, L.A.-based J. W. Miller once had a broad line of "radio coils" for pre-WWII style (HF or below) radios but now Miller makes plain inductors (lots more than earlier times) for a variety of ordinary uses (and extra-ordinary such as switching supplies). National Radio is essentially no more, and James Millen parts are rare...since WWII there have been hundreds of specialist companies starting up and making all sorts of components and assemblies for bigger electronics companies. What radio-only-interested folks have overlooked is the tremendous impact of the personal computer and microprocessor-enabled electronics plus the ubiquitous IC on the market.

The "micro" has generated a huge CHANGE in most every electronics area, away from just "radio" to everything from IPods to lawn sprinkler controllers to medical bedside monitors to warehouse on-line auditing to running a mail-order dealer (large or small) at an efficient, profit-making rate...including the shipping done by other, similarly-aided firms who all have the convenience of daily order shipment tracking. Every two years We in California have to get a smog check of our cars...done by a "micro" enabled machine...even if the cars themselves have two "micros" within. Newer cars even have RF-linked individual tire pressure monitors! The DMV offices in this state use digital cameras and special-software PCs to generate the license data itself, including the magnetic strip info on all CA license cards.

Getting into radio-electronics as a mildly-interested hobbyist in 1947 I would treasure the Allied catalog and its mail-order capability from far-away Chicago (90 miles 'distant'). There was only ONE small electronics "store" in my town then. That catalog was about 1/4 inch thick, printed on heavy newsprint. On the shelf above my PC is a 2007 Allied Electronics catalog, 2 7/8 inches thick, 2192 pages. Next to that big white-on-red thing is the green Mouser quarterly catalog, only slightly smaller than Allied's. There are parts in both catalogs that just didn't exist in electronics in 1947. I don't have the

DigiKey
"industry" catalog, just the regular one. Jameco's catalog keeps getting bigger, is already bigger than the old Allied. All four have Internet mail-order capability, including stock checking (by computer, naturally) to see if a part is immediately available.

The PC I am using now has an internal clock rate of 1.2 GHz with a RAM access rate of about 100 MHz. That's certainly in "radio" frequencies. The cordless telephone in the other room operates at 2.4 GHz, well above "radio" (HF) into microwaves. I don't know how far up the digital cable TV frequency region is, probably close to 900 MHz since it has more channels available than can possibly be watched by two people. That begins in the HF region (for 'upstream' comms on the cable system). My wife likes to use the little matchbox-size clip-on FM stereo receiver with 1 GB storage for pre-recorded music. FM broadcast is "radio." So is AM BC. My Icom R-70 still works fine despite being two decades old, does "DC" to 30 MHz with precise digital tuning at 10 Hz resolution. It sits next to an Icom IC-746Pro using digital tuning down to 1 Hz resolution plus DSP final IF filtering (all solid-state) with DSP of audio bandwidth separately for Rx and Tx. It can tune "DC" to 2m but transmit ONLY IN [USA} ham bands (160m to 2m). I am debating which HT to get: an Icom 91AD has wonderful features but its control pad is almost too small to operate safely while driving; an older analog (but controlled digitally inside) HT might be better for mobile operation? The same on a vertical antenna for home use on HF, a choice of all-bands models which just didn't exist in "radio" in 1947 or even 1957. Maybe a DC-3GHz HT receiver with scanning capability, continuous tuning just for monitoring; those radios have been on the market for a decade.

>Radio Shack sells plenty of computer-related stuff. But where's their
>RADIO-related stuff?

In most RS stores I see them up front: AM/FM BC receivers from micro to massive, scanners, cordless telephones, radio-controlled toys, even a few CBs (still "radio" at 27 MHz), Bluetooth earsets (UHF but still radio linked to cell phones), and the ubiquitous cellular telephones with a variety of built-in features. All ready-built,
ready-to-use. Convenient for the casual consumer who wants "radio" things. I've never been a fan of Radio Shack and have never depended on them for individual components, even if they had those when the first Tandy RS stores opened up in this area. Well, the local RS to me always has a good supply of watch and calculator dry cells in stock...

"RADIO" has changed. It has evolved. Like it or not, their insides have gone digital in both control and operation...using micro-processors, the same kind of thing that has enabled the PC used to access the Internet. The electronics component market has

grown larger than Jack's beanstalk was high. If We want to stay IN radio we've got to adapt, grow, evolve or at least try to keep up with it all, from "stores" to the big ham-specialty dealers' products. Or, those who don't want to change can stay in HF using old modes with all-analog circuitry in the "radio" of what once was. I chose to progress, indeed had to in order to stay in my chosen career.

I suspect Radio Shack chose that name way back in time when it was unusual, catchy, might have had some identification with the market public. Once they went national, I doubt if they were ever going to lock into HAM Radio Shack products, but some still insist they must. That's irrelevant. There's lots of national chain store names which have also evolved, changed, or were just unusual, that didn't mean they HAD to stay in one particular market area.

Fry's Electronics is pure and simple a consumer electronics chain. The "Fry's" part is made-up, has no meaning in itself. Anyone in the southwestern USA can check out a Fry's to see the HUGE supermarket of electronics available for consumers. I'd say any store with three dozen checkout stands (as in the Burbank, CA, Fry's) qualifies as HUGE. Oddly enough, they DO sell components there, most nicely packaged in clear bags. Also some coax cable. But, no "radio" parts a la 1957 genre of "radio." They sell radios to consumers at (I think, by inspection) prices better than Radio Shack...also test equipment (!) suitable for checking out analog amateur radios of old. One of the huge Fry's stores is a good indicator of today's radio market...or a Best Buy or a Circuit City.

Read your FCC Rules and Regs and you will see that any broadcast of
OTR is illegal over Echolink. Sad to say it is just not the right
forum. Best to stick with the regular internet. We're just not
allowed to broadcast anything at all.

In central Ohio 6.52 has some activity. Typically, QSOs started there,
stay there. There are a few folks who have pre-arranged simplex freqs; but
by and large 6.52 is a calling and chat freq.

Hi Marsha,

I don't think they are talking about broadcasting OTR. They are talking about a net to discuss things related to OTR. Such a discussion net would be fine.

Dee, N8UZE

While travelling on the road I use the 146.520 MHz (National Simplex Freq)
for contacts and chats.
At the base in San Diego, 146.520 MHz is used as a calling frequency, then
switch to another simplex channel such as 147.555 known as triple nickles.
Another commonly used simplex is 146.550.
All are loaded in my mobile rig and HT's.

In the USA, CQ is not used for VHF/UHF FM. Simply callsign monitoring.
CQ is used for the VHF/UHF SSB mode

Exactly Dee.

Think of it like you would a topical net on HF such as Handi-Hams, QRP or
some other niche topic.

Cheers & 73 :D

In some areas of the U.S, "CQ" is certainly used on VHF/UHF FM. If a
CQ works on 160 through 10 and works on 6m, 2m and 70cm SSB or CW,
pressing the PTT switch and saying, "CQ from K8MN" works fine on VHF
or UHF FM.

It's most certainly used here and the 2m FM band is heavily used in many places.

"S20" (or "V40" as I suppose we should call it now that 12.5 kHz channels have come into use) is the calling channel, calls are made and established there, *only then* should another channel be checked to see if it's clear *at both ends* before moving there to continue the QSO.

The annoying thing about the practice of announcing that you will be listening on a frequency *other* than the established calling channel is as I said, that the person calling has no idea if the frequency they propose to use is clear where the person who answers the call is. If the person answering is mobile, it's almost certain they won't hear anyone else unless the calling station is very close by.

1 GB2RS NEWS Sunday 29 April

The news headlines

* Radio ham saves sailors

* ISS crew connects with schools

* FCC petitioned to restore Morse tests

An amateur radio operator from Comboyne in Australia answered the calls of two sailors battling treacherous five-metre seas in the Pacific Ocean during Good Friday.

Harold Ralston, 62, has been a radio ham for 30 years and was working in his shed when he heard the cries for help.

Sailors Bob Wilson and Mike Ross struck rough seas 75 nautical miles south east of Port Macquarie. Then were left drifting helplessly when the propeller on the 14m long vessel, Maniunda broke. With no power, no steering and battling against 40 knot winds they were unable to pick up English speaking radio operators. However as Ralston was 600m above sea level he had a greater range. He was 200km away and kept in touch and alerted the rescue authorities.

The Amateur Radio on the International Space Station, ARISS, program has had a very busy and successful April. This month, amateur radio has made it possible for youngsters at nine schools in the US, the Netherlands, Australia, Hungary and Russia to speak with the astronauts and cosmonauts aboard the ISS. On 12 April, students at three schools got the chance to talk with those aboard the ISS. Two ARISS school contacts were made on 17 April and brought the total to 286 since the first ISS crew came aboard in November 2000. ARISS International Secretary Rosalie White, K1STO, commented that it was a very ambitious schedule for the dedicated team of volunteers. She noted that civilian space traveler Charles Simonyi, KE7KDP/HA5SIK, has been spending some of his precious time in space on the air.

Further ARISS contacts are planned for 5 May at around 10.24 and 13.34. The ISS audio, on 145.800MHz FM, should be audible across Europe. The contact will also be relayed via Echolink.

The American communications regulator, the FCC, has received petitions to reverse its recent decision to drop the Morse requirement from amateur radio licences. Petitioner Anthony R. Gordon, KG6EQM, of West Covina, California, contends that significant national security

implications require that the FCC take another look at the issue.

The Swains Island N8S DXpedition team made 117,205 QSOs. This represents the fourth highest alltime DXpedition contact total. After shutting down on April 15, the crew made it back to American Samoa late the following day and soon will begin the operation from Samoa as 5W8AA. The first N8S QSL cards will be available in about a month. YT1AD will handle cards for N8S.

Four CubeSats containing payloads operating on amateur radio frequencies were among several spacecraft launched successfully on 17 April from Baikonur Cosmodrome, Kazakhstan.

The rocket deployed seven CubeSats plus seven other satellites from Egypt, Saudi Arabia and Ukraine into Earth orbit, and signals from the four CubeSats have been copied on Earth. Among the spacecraft was Colombia's first satellite.

2 The Renfrew Amateur Radio Society has received a #3000 award from the All Scotland National Lottery Grant. They are planning to buy two new HF transceivers and two aerials for their special event day, the 100 year scout celebration, Scotland. It is due to take place between 25 and 27 May.

Three clubs in East Anglia, Clacton Radio Club, Felixstowe and District Amateur Radio Club and Harwich Amateur Radio Interest Group have joined forces to operate the GB400AA special event station. The station will commemorate the founding of Jamestown, Virginia 400 years ago when the ships Susan Constant, Godspeed and Discovery arrived in Virginia. They had 102 passengers and founded the first English speaking settlement in North America.

GB400AA will be operated at the Mayflower Museum on the Halfpenny Pier at Harwich where The Harwich Society will have an exhibition showing the local area's connections with the inaugural voyages. The station is planned to operate on 11 to 13 May and 25 to 26 May.

IARU Region 1 invites HQ stations of its member societies and stations of special emergency communication groups to participate in the second EmCom Party On The Air on May 5 at 11.00 to 15.00. The operation will occur on the emergency centre of activity frequencies on 40, 20 and 15 meters. The exercise will test how usable these frequencies are across Region 1. It will also increase interest and find best practice for emergency communications between emergency groups such as RAYNET. It is emphasised that this is not a contest but an emergency communications exercise.

The aim for participants is to contact IARU Region 1 HQ station OF3F in Finland and also as many other national HQ and emergency communication group stations as possible using SSB.

More information on the UK involvement in this exercise can be obtained from the RAYNET HF Team website at www.raynet-hf.net.

Now the rallies and events for the coming week.

[Note to newsreaders: as usual, use your discretion on the 29 April events.] On Sunday 29 April the Radio-Active Show takes place from 10am at the Civic Hall, Nantwich. The show will be opened by RSGB President Angus Annan. On Sunday 29 April a Surplus Electronic And Electrical Sale will take place from 10.30 at Aldridge and Barr Beacon Radio Club, Aldridge Community Centre, Anchor Meadow, Middlemoor Lane, Aldridgre. On Sunday 6 May the DAMBUSTERS HAMFEST takes place from 10.30 at Thorpe Camp Museum, Coninsby. Details form Tony, G3ZPU, on 01507 527835.

Details forthcoming rallies and events are on pages 88 and 89 of the May RadCom. Now for news of special events.

>From 25 May to 6 June, Mike Bryant, GW6NLP and Colin Kenton, MW0JNI, will be running a special event station GB100TT in association with Scarlett Point amateur radio society, to celebrate the 100th anniversary of the TT races. It will be based at Scarlett Point Tower in Castletown. For more information log onto www.qsl.net/wars or www.scarlettpoint.com. Special event station ON50EU is active until 31 December to celebrate the 50th anniversary of the Treaty of Rome.

3 Look for special event station OX60AD to be on air throughout April to commemorate the 60th anniversary of the US Air Force and the 56th anniversary of the Defence Treaty between the US and Denmark for the Protection of Greenland. Activity will be on 40, 20, 17, 15 and 10m using CW, SSB and RTTY. The Flight Refuelling ARS is operating special event station GB2FRA until 4 May to commemorate its 25th anniversary. Activity will be on HF, VHF and UHF using CW, SSB and FM. Special station EV5IPY is on the air to celebrate the participation of Belarus in the 4th International Polar Year. Operations are conducted under the aegis of the newly born Department of Polar Researches at the Belorussian Geographic Society. Special callsign HF40PAZ will be aired until 30 April and again on 1 to 30 September to celebrate the 40th anniversary of club station SP6PAZ.

The Letchworth and Baldock District Scouts, Cubs and Beavers will be operating G0LBS from 9am - 6pm at their Centenary Camp between 4th and 7th May 2007. Operation will be on 20, 40, 80, 160m and 2m. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Fred, PY2XB will sign VP5/PY2XB from Providenciales Island, NA-002 from April 19 to May 3. Operation will be on the low bands QRO on 160, 80 and 40m, and WARC bands 30, 17 and 12m. Digital modes including BPSK31 and RTTY will be emphasised. Some unusual islands will be activated for the RSGB IOTA contest in July:

* Proti, Greece, EU-158 will be activated by DL7IO and team.

* Great Bernera, UK, EU-010 will be activated by M0LSB.

* Batz, France, EU-105 will be activated as TM7BA, by F5NCU and F6EHJ.

* Quadra, Canada, NA-091 will be activated by VA7AQ.

* South Marsh (USA), NA-140, will be activated by W3RFA. PA5CW, will be active portable YB9 from Bali from 25 April to 10 May. Kang, DS4DRE, is currently active as DS4DRE/4 from Hong Island until 30 June. Activity will be on 80-10m, CW and SSB Len, UR3HR, Sergey, UR7HTX, Max, UR7HTZ, 3D2TZ, Alex, UT5UY, 3D2UY and Alex, UX0LL, 3D2A, will be activating two IOTA groups between late April and early May. Their activity will start from Taveuni Island OC-016, using the callsign 3D2AP, 3D2TZ and 3D2UY between April 27 and May 3. The team will then move to Yanuca Island in the Ringgold Isles Group OC-189 as 3D2RI between 3 and 7 May. QSL cards should be sent direct to home callsign or through the bureau,QSL 3D2UY via UT5UT, 3D2AP via UX0LL and 3D2TZ via UR7HTZ. Due to the high cost of this operation on a remote Pacific Island, the group is asking for sponsorship by various DX organizations and individuals around the world. If you would like to help fund or sponsor their DXpedition, please contact Alex, UT5UY, by e-mail at: ut5uy@ukr.net. Dani, EA4ATI is returning to Dakar, Senegal and will remain there until April 2008. He expects to be active as 6W/EA4ATI and 6W1EA, probably with a beam for 10, 15 and 20 meters, and dipoles for the other bands. QSL direct via homecall.

4 DL9MWG will be active from Malta as 9H3RT from 18 April to 11 May. Activity will be on HF, mainly CW. Kevin, BA4XA, Mary, BA4XYL, Roy, BA4VE, Li, BD4XD, Wang, BD4XW,Chang, BG6IQD and Tiger, BG4VGJ will be active as homecall 4 from Dongxilian Island, AS-135, on 1 to 7 May. They will operate holiday style on or around the usual IOTA frequencies using 100 watts into a 2-element Yagi, vertical and dipole antennas. QSL via home calls. Eduardo, CU2AF will be active as C91AF from Maputo, Mozambique from 27 April to 6 May. He plans to operate for a few hours daily on 80-10 meters SSB, RTTY and PSK31. QSL via home call. CQ5MGP is the special callsign used by the Portuguese Navy amateur radio group, Nucleo de Radioamadores da Armada, CS5NRA, during the Portuguese Navy Day Contest. This year's event will be held on 5 to 6 May. Karen, DL8HK, CW and Alfred, DB1VQ,SSB, will be active as DL0EFA/p from Usedom Island, EU-129, O-13 for the German Islands Award, from 26 April to 1 May. QSL via DK9VB. John, K9EL will be active from St. Martin, NA-105, from 27 April to 6 May and will operate holiday style as FS/K9EL on 10-80 meters mainly CW and SSB. QSL via home call, direct or bureau. Jim, MM0BQI will be active as MM0BQI/p from Shuna Island, EU-008 from 28 April to 5 May. He plans to operate RTTY, CW and SSB on 17-80 meters. QSL via home call, direct or bureau. A group of operators from the Radio Club de Honduras will be active as HQ9L from Little Cay, Bahia Islands (NA-057) on 4 to 6 May. They will operate SSB. CW and digital modes on 160-10 meters. QSL via HR2RCH, direct or bureau. Look for Marconi memorial station IY0TC to be active from Civitavecchia on the 28th for the International Marconi Day. QSL via I0KHP. Fabio, IW1DFU will be active as IA5/IW1DFU from Elba Island, EU-028, on 25-30 April. Expect him to operate mainly CW on 20 and 30 meters. QSL via home call, direct or bureau. Look for JS6RRR/JS6 and JI3DST/JS6 to be active on 160, 80, 40, 17, 15, 12, 10, 6 and 2 meters SSB, CW, RTTY, SSTV and FM) from the Miyako Islands, AS-079, from 27 April to 7 May.

QSL via bureau only. Jim Martin, MM0BQI, will be operating from the island of Shuna, in the Inner Hebrides, NW Scotland, IOTA EU008 and IOSA FL08 from 28 April to 5 May. He will also have a boat available so other island activations may be possible in the local area. Operation will mostly be on 80, 40,30 and 20m, RTTY, SSB and CW. Now the contest news

The RSGB 144 MHz activity and club championship contest takes place between 2000 and 2230 local time on 1 May, on all modes. The exchange takes the form of RST, serial number and locator. The ARI International contest takes place between 2000 on 5 May to 1959 on 6 May on the 1.8 to 28MHz bands CW, SSB, DATA modes. The exchange takes the form of RST and serial number.

5 The RSGB 432 to 248GHz contest takes place between 1400 on 5 May to 1400 on 6 May on the 432MHz to 248GHz bands, on all modes. The exchange takes the form of RST, serial number and locator. The RSGB 432MHz Trophy contest takes place between 1400 to 2200 on 5 May, all modes. RST, serial number and locator form the exchange. The RSGB 10GHz Trophy contest takes place between 1400 to 2200 on 5 May, all modes. The exchange is RST, serial number and locator.

Now the solar factual data for the period from 16 to 22 April, compiled by Neil Clarke, G0CAS.

Solar activity was very low with no solar flares taking place. The solar disc was spotless except for the 17th and the 18th when a small single spot appeared. Solar flux levels remained at 69 units except for the 19th when it declined to 68. The average was 69 units. The 90 day solar flux average on the 22nd was 74 units, that's one unit down on last week. X-ray flux levels remained below the minimum A1 level everyday. Geomagnetic activity was quiet, for example the Ap index was only 1 unit on the 16th. A coronal hole disturbance arrived as forecast on the 22nd when the Ap increased to 10 units. The average was Ap 6 units. The ACE spacecraft saw solar wind speeds decline from 430 kilometres per second to 280 by the 21st. Speeds then increased to 470 kilometres per second during the 22nd. Particle densities were low everyday but increased to 32 particles per cubic centimetre on the 22nd. Bz varied between minus 3 and plus 2 nanoTeslas on the quiet days and between minus 8 and plus 10 nanoTeslas on the 22nd. At HF, 14MHz remains the only really consistent band, with some good evening openings to South-East Asia. Occasional good openings, mainly over southerly paths, occurred on 18 and 21MHz. 24 and 28MHz were patchy at best. Some areas of the UK enjoyed enhanced tropo at VHF and UHF. And finally the solar forecast.

This week solar activity looks set to continue at very low levels. Solar flux levels should be around the 70 mark. Geomagnetic activity is expected to be unsettled today due to a recurring coronal hole. For the rest of the week activity should be mostly quiet. MUFs during daylight hours at equal latitudes should be around 18MHz for the south and 15MHz for the north. The darkness hour lows are expected to be about 9MHz.

Paths this week to India should have a maximum usable frequency with a 50 per cent success rate of around 22MHzs. The optimum working frequency with a 90 per cent success rate will be about 17MHz. The best time to try this path will be between 0800 and 1600 hours UTC. Normally the start of May heralds the start of the sporadic-E season. Openings could take place on 28MHz and 50MHz. It maybe a couple of more weeks yet before openings take place on 144MHz. And that's all for this week from the propagation team.

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Sunday 29 April Chesham and District Amateur Radio Society is running its Advanced Licence Course. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Monday 30 April Basingstoke Amateur Radio Club is having a club night. Contact Frank, M0AEU, by email to barc@2lo.info.

On Monday 30 April Felixstowe and District Amateur Radio Society is having a visit to BBC Norwich or RAF Wattisham with Mark, M5BOP. Contact Paul, G4YQC, by email to paul.whiting@bt.com.

On Tuesday 1 May Chelmsford Amateur Radio Society is having a talk entitled 'microwaves demystified' by John Wood, G4EAT. Contact Martyn, G1EFL, on 01245 469 008.

On Tuesday 1 May Cray Valley Radio Society is taking part in the 2m Club Championship. Contact Bob, BRS32525, on 020 8265 7735 after 8pm.

On Tuesday 1 May Horndean and District Amateur Radio Club is having a social evening. Contact Stuart, G0FYX, on 023 9247 2846, or on the web at www.hdarc.co.uk.

On Tuesday 1 May Stevenage and District Amateur Radio Society is having a project night. Contact Neil, M0ARH, on 01438 217 077.

On Wednesday 2 May Dover Radio Club is having a natter and operating night. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 2 May Fareham and District Amateur Radio Club is having a natter and operating night with G3VEF and G8KGI. Contact Jim, M1JJN.

On Wednesday 2 May Newbury and District Amateur Radio Society is discussing antennas. Contact Kevin, G6FOP, on 01635 826 397, g5xv@ntlworld.com.

On Wednesday 2 May Norfolk Amateur Radio Club is having a talk on multiband antennas by Ted, G3FEW. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 2 May Worthing and District Amateur Radio Club is having a talk on surface mount technology by G1ZTN. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 3 May Cray Valley Radio Society is having a talk on Digital Radio Mondiale by G0UKN. Contact Bob, BRS32525, on 020 8265 7735 after 8pm.

On Thursday 3 May Horsham Amateur Radio Club is having a talk on the future of electronics by Mike Underhill, G3LHZ. Details on the web at www.harc.org.uk.

On Thursday 3 May Maidenhead and District Amateur Radio Club is having an informal evening. Contact John, G8RYW, on 01628 628 463, or by email to g8ryw@tesco.net.

7 On Thursday 3 May Shefford and District Amateur Radio Society is having a talk on the ins and outs of radio by Terry, G4OXD. Contact David, G8UOD, on 01234 742 757.

On Friday 4 May Crystal Palace Radio and Electronics Club is having a talk and demonstration of a high voltage Tesla coil by Ian Daniels, G4VTD. Contact Bob, G3OOU, on 01737 552 170.

On Friday 4 May Mid-Sussex Amateur Radio Society is having a quiz night with quiz masters Gavin and Phil. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 4 May Wey Valley Amateur Radio Group is having a talk on laptop radio wizardry for beginners by Derek Stanners, G3HEJ. Details on the web at www.weyvalleyarg.org.uk. NEWS FOR THE SOUTH-WEST

On Sunday 29 April Bailiwick Of Guernsey Raynet Group is taking part in the RAYNET Zone 7 Exercise ICE 4. The Control station will be setting up at Beau Sejour from about 9.30am local time and visitors are most welcome. Contact Mike, GU3WHN.

On Wednesday 2 May Exmouth Amateur Radio Club is having a spring clean of the shack plus an auction bring and buy. Contact g0uil@eclipse.co.uk.

On Wednesday 2 May South Bristol Amateur Radio Club is having a workshop on Morse code with G4YZR. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 2 May Thornbury and South Gloucestershire Amateur Radio Club is on the air. Contact Tony, G0WMB, by email to

tonytsgarc@beeb.net.

On Wednesday 2 May Trowbridge and District Amateur Radio Club is having a talk on amateur radio and Sumburgh Lighthouse, GB2SLH, with Tony, G0GFL and Nikki, M5YLO. Contact Ian, G0GRI, on 01225 864 698, E/W.

On Thursday 3 May Cornish Radio Amateur Club is having a talk on RAF RF by Wayne Gannon. Contact Ian, 01872 561 058.

On Thursday 3 May Saltash and District Amateur Radio Club is planning the club rally table. Contact Brian, M0BHG, on 01752 844 321.

On Thursday 3 May Swindon and District Amateur Radio Club is having a contest operating workshop with James, M1DST. Contact Mike, M5CBS, on 01793 826 465.

On Thursday 3 May Yeovil Amateur Radio Club is having a talk on aerials by G3MYM. Contact Derek, 01935 414 452, or by email to m0wob@tiscali.co.uk.

On Friday 4 May Bournemouth Radio Society is having a talk entitled Radars 20MHz to 40GHz by Chuck Hobson, G0MDK. Contact John, G0HAT, on 07719 700 771.

On Saturday 5 May Flight Refuelling Amateur Radio Society is running its Foundation training course. Contact Chuck on 01202 881421.

NEWS FOR THE MIDLANDS

On Sunday 29 April Aldridge and Barr Beacon Amateur Radio Club is having its 8th annual sale of surplus and radio electrical goods at the Aldridge Central Hall. Contact Charles, 01922 636 162.

8 On Monday 30 April Gloucester Amateur Radio and Electronics Society is having a VHF operating and workshop evening. Contact Anne, 2E1GKY, on 01452 548478, daytime.

On Monday 30 April Stourbridge and District Amateur Radio Society is having an open shack night. Contact John, M1EJG, on 01562 700 513.

On Tuesday 1 May Derby and District Amateur Radio Society is having a May Day junk sale. Contact Martin, G3SZJ, on 01332 556 875.

On Tuesday 1 May Loughborough and District Amateur Radio Club is having a magazine review night. Contact Chris, G1ETZ, on 01509 504 319.

On Tuesday 1 May Wythall Radio Club is taking part in the 2m Club Championship from the shack. Contact Chris, G0EYO, on 07710 412 819, or by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

On Thursday 3 May Stafford and District Amateur Radio Society is looking at the restored receiver collection of Mike, G8BMP. Contact Graeme, G4NVH, on 01785 604 534, or by email to graeme.boull@ntlworld.com.

On Friday 4 May Cheltenham Amateur Radio Association is having a talk on digital techniques on 20m by Ron, G3SZS and Colin, G3VTS. Contact Pat, G3IKR, on 01386 792 542.

On Friday 4 May Hucknall Rolls-Royce Amateur Radio Club is on the air on VHF and UHF from 8pm. Contact Carl, M0XBE, on 07979 092 447, or on the web at www.hrrarc.com.

On Saturday 5 May Lincoln Short-Wave Club is operating the special event station GB2CWP from the East Kirkby Aviation Heritage Centre. Contact John, G1TSL, on 01526 323 153.

On Sunday 6 May Lincoln Short-Wave Club is visiting the Dambusters Hamfest at Thorpe Camp, Coningsby. Contact John, G1TSL, on 01526 323 153.

NEWS FOR THE NORTH OF ENGLAND

On Sunday 29 April North Cheshire Radio Club is holding its AGM. All members, past and present, are urged to attend. Details from Gordon Adams, G3LEQ, on 01 565 652652.

The Irvington High School Science Club is announcing the creation of a New High Altitude Balloon group. High Altitude Balloons are Helium filled latex balloons that fly at altitudes higher then 85,000 feet (some make it to over 140,000 ft). Amateur Radio and APRS are both used to track the balloons during the flight and after landing The group will be called "New York Near Space Research" or NYNSR for short and will be conducting flights by late Spring next year in the Lower Hudson River Valley. We are hoping to have a website purchased by the end of this week and have some more information available. We have started a public Google group under the name New York Near Space Research already and you may join if you like.

73 to all,
Javier Anderson, KC2MFC

P.S. the link to our google group is http://groups.google.com/group/NYNSR

Hi Dee ,

That's a horse of a different color as one of my favorite movies goes... sounds like a nice idea. But I agree that you must have 2 licensed control ops at all times as Hans pointed out. Sounds like you have some more investigating to do. Be interesting to see what you come up with.

Vy 73,

Marsha N8FE

I have a couple of ADSP-2181's burning a hole in my junque box. Yes,
I know they're a little slow and 'dated', but they were free and I
thought they'd make a nice platform for a learning project, perhaps an
IIR or FIR SSB filtering scheme.

Any of you done any designs with this, or have any non-proprietary app
notes for this device?

TIA & 73, RDW

Irish Radio Transmitters Society
Radio News Bulletin

Sunday April 29th 2007

Jubilee Dinner and AGM

The 75th Jubilee Dinner and AGM of the Society took place over last weekend at the Vienna Woods Hotel in Cork. The Jubilee Dinner was on the Saturday evening and 120 sat down to enjoy a first class meal. Guests at the dinner included Dave Sumner K1ZZ, Secretary of the IARU and CEO of the ARRL, Ole Garpestad LA2RR, President for Region 1 IARU, Dermot Nolan, Director of ComReg and Derek O'Reilly from ComReg, Angus Annan MM1CCR, President of the RSGB, John Breen EI7BV who represented the Minister for Communications, Marine and Natural Resources and Roderick Mooney EI2P a Trustee of the Society and one of the longest standing active call signs in EI being licensed since 1937. After the usual toasts to the President of Ireland, the IRTS and the Guests gifts were exchanged between Dave Sumner K1ZZ, Ole Garpestad LA2RR, Angus Annan MM1CCR and the President Finbarr EI1CS. The President then presented special commemorative badges to the Past Presidents. Of the present nine Past Presidents, eight of them were in attendance at the dinner to receive the presentation. The ninth was attending a family wedding in the UK.

Groups of friends chatted into the wee small hours and it was very evident that the evening was very much enjoyed by the large attendance. After the rally on Sunday the 75th Annual General Meeting of the Society took place at 2.30 p.m. Somewhere between 60 and 70 members attended the meeting, which was addressed by K1ZZ, LA2RR and MM1CCR. The President, Finbarr EI1CS in his address to the meeting referred to the extent of the work being carried out by Committee members and others and he emphasised the wonderful cooperation and assistance that he had received during the year.

The Committee nominations were formally approved by the AGM. At the conclusion of the meeting the Society Awards were presented and we will bring you details of

these next week.

AREN News

AREN had a stand at the recent IRTS AGM rally in Cork on the 22nd of April. There was an exhibit of the Anderson Powerpole system, the PG-40s power manager/charger and the Watts-up meter. A Power-pole crimping service was made available. The new Open tracker 2 was demonstrated along with the SMT version that fits inside the new Alinco DR135Mk2. Also on display was a HF Go-kit which included an FT857D, compact switch mode PSU and an NVIS antenna and tuner all housed in a compact case.

Official AREN bibs and hats were also displayed. Officers John Ronan, Conor ONeill and John Ketch were on hand to discuss activities and queries form visitors to the stand.

---

2 Metre Counties Contest

Thanks to all the participants of the recent 2m counties contest. The turn out was much the same as previous years, with a large turnout from GI stations which shows the wide interest for the contest.

Conditions were variable with QSB causing some problems. Several of the rarer counties were activated, however Co. Sligo is still needed. Please send logs to EI8IU at QTHR or email to "contests at irts dot ie by the 9th of May.

Booklet about Howth Martello Tower

Tony, EI5EM has written a short booklet outlining the history of the Howth Martello Tower, which now houses a vintage wireless museum and also is the home of the Howth Martello Radio Group (EI0MAR). The booklet is an 18-page A4 document and was primarily written for visitors to the tower. However, Tony feels that it might also be of interest to EI experimenters as two famous pioneering experimenters, Marconi and de Forest (inventor of the triode valve) conducted experiments from the tower. The first successful telegraph cable from Great Britain to Ireland came ashore on Balscadden Beach and terminated in the tower in 1854.

EI0MAR was QRV yesterday for Internal Marconi Day and had award station status for the celebration. A report

on the day will follow shortly. If anybody would like a copy of the booklet, Tony will be glad to post it at a nominal charge of 5. Tony's address is in the call-book or email "ei0mar at eircom dot net".

Limerick Radio Club

The next meeting will take place on Thursday the 10th of May at 7 p.m. at Limerick Institute of Technology.

Limerick Radio Club has been invited by the Foynes Flying-Boat Museum to operate a special Amateur Radio Station in conjunction with the commemorative Transatlantic Re-Enactment Flight 1937 from Newfoundland Canada to Foynes Ireland. A special call-sign has been allocated to the station EI-70-FOY. The station will be on the air from the 6th to the 8th of July 2007. On HF the station will operate from 80 to 10 metres. It will also operate on VHF / UHF using the EI70FOY call-sign.

A special QSL card, commemorating the Re-Enactment Flight, will be sent to all stations worked over the three-day event. All QSL cards should be sent to the Clubs QSL Manager Alan Cronin EI8EM at QTHR.

Limerick Radio Club can be contacted at ei4lrc at eircom dot net or at www.qsl.net/ei4lrc.

Tipperary Amateur Radio Group

The next meeting of The Tipperary Amateur Radio Group will take place on Thursday next the 3rd of May at Raheen House Hotel Clonmel at 8 p.m. Any Expermenters wishing to take part in the Galtee Walking Festival on the June bank holiday weekend are more than welcome, Contact any member of the club or call into the meeting, all are welcome.

South Eastern Amateur Radio Group

Going forward and starting from Monday the 28th of May, meetings of South Eastern Amateur Radio Group will take place on the last Monday of each month instead of last Wednesdays. The move has been decided in order to facilitate a number of members who are unable to attend on Wednesdays.

The committee meetings will also take place on the first Monday of each month and the next committee

meeting will take place on Monday the 7th of May.

Second EmCom Party on the Air

The Second EmCom party on the Air will take place on Saturday the 5th of May 2007 at 11.00 - 15.00 UTC. The operation will take place on and near the emergency Center-of-Activity (CoA) frequencies on 40, 20 and 15 meters (+/-QRM). The CoA frequencies on 80 and 17 meters will not be used during this event.

The objective of the party is to increase the common interest among member societies in emergency communication, test how usable the CoA frequencies are across Region 1, and create practices for international emergency communication between Region 1 member societies and special emergency communication groups. This is not a contest - it is an emergency communications exercise!

More information including the exchange format is on the news page of www.aren.ie.

Theory Examination

The next Theory Examination for the Experimenters Licence will be held on Thursday the 28th of June next. Places for the examination are limited and will be allocated on a first come first served basis. In order to reserve a place for the exam, intending candidates should forward the appropriate fee to Se&#65533;n Nolan EI7CD, 12 Little Meadow, Pottery Road Dunlaoghaire, Co. Dublin. The fee is 50 Euro or 25 Euro for full time registered students, those who are retired, are unemployed or have a disability. In addition to the exam centre at the ComReg offices in Dublin, it has now been decided with the agreement of ComReg that an examination should be held on the same date and with the same paper at the Community Centre, Carrigtwohill, Co. Cork. This is to facilitate those at present attending classes for the experimenter licence examination in Cork and Waterford."

The closing date for the examination is the 16th of June and it will be strictly adhered to. Sean EI7CD's address again is 12 Little Meadow, Pottery Road, Dunlaoghaire, Co. Dublin and it can be found in the call book section of the IRTS website at www.irts.ie Sean's e-mail address for further enquiries is "ei7cd at gofree dot indigo dot ie".

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to news at irts dot ie for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sundays bulletin.

Hi Ivor

I left the UK just as 12.5 channels were being implemented. Are they being used? Or does everyone still use the old channels but with narrower deviation?

"CQ V40" just doesn't seem to sound right to me :o)

They're not used much, to be honest. Although there are a few simplex
Echolink gateways that use some of them.

> "CQ V40" just doesn't seem to sound right to me :o)

No, you're right, it doesn't, does it..?! ;-)

It's becoming evident that the housing market here is going to force me into a remote HF site for serious contesting and DXing.

What are the current equivalents for the Kachina 505-style rigs? The Flexradio 5000C is intriguing but doesn't seem optimized for remote site use, and the new Ten Tec seems "toy-like". Any other choices?

Control via an HT is a major kludge at best, probably pasted on for
marketing reasons

first> You'd have to be in simplex range. I'm exploring the idea of
putting the HF station about 40 miles distant at a friends place in
the Cascades.

second> Anyone with a compatible HT could hack your control link and
hijack your station.

third> Can you imagine operating in the CQWW contest over an HT
without an interface to your contesting software.

But the PICASTAR that someone mentioned in another thread could fill
the bill if it weren't a roll-ur-own (love to do it, but I don't
have //THAT\\ much time available!)

I would think that just about any of the offerings that are remote control capable would be about the same. If you can hook up a computer to it and control the rig it will do.

Folks may argue this rig or that is better but I would propose that it's getting hard to buy junk, if you are buying new. Most of the current manufacturers really don't produce junk, at least when you compare them to other makers rigs in the same price range. (individual experiences will vary.)

Building a remote station like this is going to be a complex task and the Rig you choose is but a small part. It can be successfully done, of course, but this is going to be time consuming and expensive if you don't already have what you need (or know how to build it.) I look forward to hearing how this works out for you because I live in a house blessed with very restrictive CC&Rs, and I'm thinking about this very thing. Only my remote station would likely be in a totally different state... :)

Either the TT Orion or Orion II might make good candidates. N4PY has
software which might turn the trick.

If your needs revolve around casual ragchewing you're probably right.
Heck, my old 1970's Heath SS-9000 might work in that sort of
application.

But those "about the same" mass-market radios wouldn't cut it in a
competitive contesting environment, even if someone is at the front to
ride herd on the hardware controls.

Was there really any expectation to the contrary, Jim?

There's not been ten cents worth of promotion of the new
licenure requirements in the non-Amateur press, ie: Pop Science, Pop
Mechanics, etc etc etc...

WE know all albout the changes...No one else does, and even if
the ARRL, CQ, W5YI, etc started the full court press I seriously doubt
we'd see more than that same brief surge as you noteed above....Oh, to
be sure there's going to be a handful of the 11 meter DX crowd that
decides to "go legal", but that's still a very samll percentage.

Nope...I think we're getting all the "influx" now that we will.
I've said it before and here it is again...Amateur Radio does NOT need
"big numbers"...We need to have QUALITY licensees...That means solid
skills and a NON-COMPROMISED question pool like we have today.

But has been, nonetheless, NOT Amateur related. Trying to
parallel Amaeur and Commerical HF radio operation is the proverbial
Apples-vs-Oranges argument. No doubt your commercial experience was
rewarding on it's own level.

I'd say by the international press covering numerous uses of the
Amateur services recently that you're both incorrect.

Also, the the communications that Len refers to as "migrating to
satellite relay" are, once again, NOT Amateur Radio functions.

Snippage.

For many people Amateur Radio is a hobby.

For others it is a tool to be used for a greater need.

The wide brush applying "hobby" does not fit.

> As to this whole claim of being a backup communications
> provider when the infrasture fails in disasters, I have to

The Midwest Floods of 1992. Katrina. Rita. Andrew. Spetember
11th. At least accoriding to the NOAA, The American Red Cross, The
Salvation Army, The Department of Defense, The Department of State,
etc etc etc.

> Having been required to design electronics for terrible
> environments, I know that amateur radio equipment isn't
> going to survive better than the infrastructures' gear.
> [see May QST for one piece of equipment that didn't survive
> Katrina...lost with one amateur's entire station]

ONE Amateur's...Amateur Radio's greatest strength is in its
multiplicty of resources...Every licensee is yet another "facility"
from which to draw upon. No one piece of radio gear is
indestructable.

The COMMERICAL infrastructure's weakness is it's limitied
numbers, complexity of technology and it's cost. AMATEUR Radio's

strengths are just the opposite.

> The Public Safety Radio Services have their radios now and
> use them every day. NOAA has its weather observation
> services plus satellite downlinks.

Funny you mention the NOAA. One of thier "Enviromental Heros"
this past Earth Day was an Amateur licensee (KC5EZZ), and he was
recognized specificallly for his contributions to NOAA with an
extended Amateur Radio net.

> already experienced)?

Perhaps after you've joined some local Amateur clubs and actually
get an opportunity to exercise the privileges of your newly acquired
license your scope of experience as to what Amateur Radio is, can be,
and has been will be enhanced.

> Recreation IS, to my mind, an asset for all.

It is.

But no where in Part 97 is the word "recreation" used.

That the Amateur Service does provide recreation is a given. But some continue to insist that "recreation" or "hobby use" is ALL that the Amateur Service is required to provide.

Almost 100 years of history has proven differently and even in today's techno-saavy society continues to be so.

> It diverts
> our stresses from making a living, eases tensions, makes

There's still plenty of time for you to expand the scope of your HF experience, Len. Drop kick that "commercial operator" mode and re-focus on AMATEUR applications for a while! You'll enjoy it!

I'm not sure what you mean by "non-compromised".

If it means a secret test, forget it. The only way we'd ever get secret tests again would be for FCC to take over the process, and they're just not going to do that.

And even if FCC could somehow be convinced to take over the whole test preparation and administration process, somebody could just repeat Dick Bash's tricks of 30+ years ago, and the tests wouldn't stay secret.

The one thing that *can* be done is to make the pools so big that it's easier to learn the material than to learn the test.
Anyone can submit questions to the QPC.

Well, if you are into contesting and chasing DX and cannot compromise features, then you are surely going to have to buy the most automated radio you can find and spend a lot of money in the process..

I'd look at the top of the line radios from all the manufactures.. TenTec, Icom, Yaesu, Kenwood etc, and pick the radio that has the most features that you can control from a computer and the best automation software available. You may even need to consider moving to separate receiver/transmitter boxes to get the best receiver performance possible. (Which may put you into the commercial equipment world for receivers and a whole new price class.)

Eventually, the software defined radios (like Flexradio's) may become viable for this purpose, but at last glance they still had sub-par performance compared to the same priced radios in the market, although the automation would be much better. I'd give them a few years more and I'll bet they are going to be very competitive in price and performance and take the likes of the Icom 7800 for a ride unless the major manufacturers step it up.

But that is just the receiver/transmitter equipment of a remote station... There is a LOT more stuff to consider..... Towers, antennas, amps, coax switches, tuners, computers, rotors, transmitter fail safe devices, remote connectivity, security and electrical power come off the top of my head. The radio may be only a small part of the total cost here if you are doing a remote located serious contest station... Big bucks... It might be cheaper to just move.. :)

Popular Science and Popular Mechanics are both newsstand
periodicals and my barber and my dentist include those in their
waiting area. :-) By scan of their contents, both seem to cover
whatever high-tech is "in" regarding all of science and technology.

At one time in the 1940s and 1950s, Popular Science did have
a few hobby projects concerning radio and home music systems
(of their day), none of them more complicated than using one to
three vacuum tubes. The largest such article that I recall was a
multi-part construction article of a (then) wideband (10 MHz or so)
oscilloscope authored by John Wood Campbell, then Editor in
Chief of Astounding Science Fiction magazine (later "Analog").

>> Nope...I think we're getting all the "influx" now that we will.
>> I've said it before and here it is again...Amateur Radio does NOT need
>> "big numbers"...We need to have QUALITY licensees..
>
>Why can't we have both?

What defines "quality?" That is a popular descriptor yet is not
defined
fully by any of its users.

All who are licensed in a particular radio service should obey the
applicable laws concerning that radio service. As to what they
do within that radio service should be up to the individual. The FCC
gives all licensed U.S. radio amateurs quite a bit of freedom to do
what the individual wants to do. As such, the "quality" aspect would
seem largely subjective on the part of whoever uses that word.

>And even if FCC could somehow be convinced to take over the whole test
>preparation and administration process, somebody could just repeat
>Dick Bash's tricks of 30+ years ago, and the tests wouldn't stay
>secret.

That's a presumption that Mr. Bash was the only one to do "tricks." It belies the hard-cover "Q and A" books that were available as far back as the 1950s. Those "Q and A" books were available on all current classes of FCC tests and a number of state licensing tests for various state licenses.

Point of personal history: I tried to get one for the FCC Commercial license test in 1956, but local bookstores did not have them available. I borrowed the (then format) FCC Regulations loose-leaf binder and memorized as much as possible of the entire set as applied to all. There were fewer radio services then than 51 years later.

>The one thing that *can* be done is to make the pools so big that it's >easier to learn the material than to learn the test.

A popular presumption is that all "just memorize the questions and answers" prior to a test. That is difficult to prove since each applicant's efforts are unique to the individual. Certainly certain regulations must be memorized. However the questions regarding theory and operation depend on the experience and previous knowledge of each individual.

As to the actual number of questions-answers in the pools, the following are hand counts of all three current question pools from a print-out of them made prior to my 25 February 2007 exam:

Technician: 35 questions, Minimum required in pool 350, Actual number in pool 392. Ratio of pool to test questions = 11.20:1

General: 35 questions, Minimum required in pool 350, Actual number in pool 485. Ratio of pool to test questions = 13.86:1

Extra: 50 questions, Minimum required in pool 500, Actual number in pool 802. Ratio of pool to test questions = 16.04:1

All three classes: 120 questions total, Minimum required (total) 1200, Actual number in pool 1679. Ratio of pools to test questions 13.99:1 average.

Note: The above is not a scientific study and the actual count may be
off by a few questions. As it is now (General will change in mid-2007),
the actual pool question quantity is over the minimum regulatory number of ten pool choices per required test question, all classes.

I have been suggesting elsewhere (for several years) that a "cure" for
the presumption that all "just memorize the pool to pass" is to increase the QP size. Very few commented on that elsewhere.
I don't personally believe in that presumption yet it is frequently stated by others elsewhere.

To some degree the increase in QP size that has already been done by the NCVEC Question Pool Committee. Having had a recent exposure to all three class pools in a test environment, I would judge
that the NCVEC QPC has done a good job overall for the current QPs. In review, post-test, I would say that the NCVEC QPC has introduced enough 'distractor' questions to make an applicant pay closer attention to both questions and choice of answers.

Considering the present-day scope of possible activity by licensed radio amateurs in the U.S., the type and kind of questions in a NCVEC QP can have a large variety. Part 97 Title 47 CFR gives licensees that variety. The choice of which questions to include can be difficult under such a situation...especially so when there is random choice of which questions to include within a specific type and kind on any exam.

>Anyone can submit questions to the QPC.

Their website is at www.ncvec.org

>focus on AMATEUR applications for a while! You'll enjoy it!

I will politiely ask you to rephrase that paragraph.

I cannot "drop kick" my previous life experience. In granting me
an Amateur Extra license, the FCC has not required that I give up
anything (as in discarding or "drop kicking") insofar as radio...nor
of experience in radio nor of formal training in radio. Further, the
FCC gives all licensees a great deal of freedom of choice in their
class's frequency spectrum and modes of communications. There
is no compelling mandate that any licensee must 'operate' in
according to what certain groups of amateurs say one must.

"Radio" and all of electronics works by the same laws of physics,
regardless of the federal regulations on use made by governments.
The jargon, phrases, type of communication conveyed may vary
between different administrated radio services, but the basic laws
of physics will still apply on RF generation and the way it is
propagated.

The scope, content of my personal activities are of no one's concern,
nor should they be. If I choose to convey my gained experience and
knowledge into amateur radio, that is my concern. Such might help
others with lesser experience and knowledge, not hinder anything.
I don't choose to isolate myself solely into some amateur lifestyle
and there is no specific requirement as to what I 'should' or 'must'
do as an amateur radio licensee other than obey the regulations.

In all electronic communications, telegraphy was first a commercial
activity, wired and by radio later. Single-channel single sideband
was first a commercial activity, first wired (in long-lines service
as
frequency-multiplexed multiple voice channels) then by radio..
Voice communications was first a commercial activity (via
broadcasting, first on AM then on FM). Data communications by
radio was first a commercial activity, wired then by radio (although
called 'teleprinter' before the word 'data' became the vogue). Tele-
vision was first a commercial activity, again via broadcasting. The
various TORs (Teleprinter Over Radio) were all a commercial activity
first. Both direct sequence and frequency-hopping spread spectrum

techniques were first a military, then a commercial activity. All of those have since been adopted for amateur radio use. To "drop kick" the commercial modes would be to remove all modes of communications available to U.S. radio amateurs today...except PSK31, a data mode exclusively innovated-invented-designed by Peter Martinez, G3PLX, solely for amateur radio use.

Without belaboring the obvious, you're correct.

The "cheaper just to move" isn't an option. I am embarking on a second career after serving in the military for 27 years, and the 'perfect position' I've landed in civilian life dictates a general locale for my residence. It is unlikely that I'll find enough real estate to build a good station in that locale, so a remote base style of operation is required if I'm to re-enter my first love in radio, top-ten class contesting and serious DX'ing. I have a good friend on rural acerage in the Cascades who will 'lease' me a fairly large climate controlled space in his basement for a station and will consent to up to four towers to be erected 'in the woods' on the back of his property.

Budget (non-recurring cost) to build this remote station is $37,500 which includes some PE engineering assistance. Space/antenna-farm acerage lease cost $1,000/yr, and low-latency broadband dedicated control link cost TBD.

The decline in licensing continues unabated.

With the exception of a minor uptick in October '06, the number of licensed amateurs has been in decline since '03
.
Feb 07: 655,477. Mar 07: 655,048 Apr 07: 654,940

Where are the "hoards of technically savvy" people in the wings "just waiting for the code requirement to disappear"?

> I've said it before and here it is again...Amateur Radio does NOT need
> "big numbers"...We need to have QUALITY licensees...That means solid
> skills and a NON-COMPROMISED question pool like we have today.

Exactly. History has proven time and time again that quality, not quantity, is the solution to most problems.

Amateur Radio Newsline(tm) Report 1551 - May 4, 2007

Amateur Radio Newsline report number 1551 with a
release date of Friday, May 4th, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T. The ARRL backs away
from Regulation by Bandwidth but says that it
will be back. Also, researchers say that the
next solar cycle is late and so will be the High
Frequency D-X. Find out the details on Amateur
Radio Newsline(tm) report number 1551 coming your way right now.

**
RESTRUCTURING: ARRL RECALLS REGULATION BY BANDWIDTH PETITION

The ARRL has requested that the FCC permit it to
withdraw its "Regulation by Bandwidth" petition
known at the Commission as RM-11306. The ARRL
says it wants time to reassess and re-file but
those who oppose the concept are calling it a
victory over what they see as a misguided attempt
to change the service. Amateur Radio Newsline's
Bill Pasternak, WA6ITF, is here with the rest of the story:

--

The bloggers are having a field day. They claim
that they are the ones who forced the ARRL to
withdraw its November 2005 Petition for Rule
Making. One calling on the FCC to establish a
regulatory system that would have done away with
traditional by-mode subbands and brought about a
new regulatory scheme based on the bandwidth of a given signal.

Whether or not it was the web log writers had
anything at all to do with the ARRL decision to
abandon the measure the FCC dubbed as RM-11306
will be forever open to debate. The real
deciding factor was likely the 1000+ comments
filed with the FCC, the majority of which opposed
the idea. And rather than face the possibility
of a wrenching political defeat, the League
wisely chose to walk away from this initial
attempt but has left the door open to try again at some later date.

So what was so wrong with RM-11306? That really depends on where your interest in Amateur Radio lies? For the average ham in the street it really meant nothing more than doing away with the concept of subbands and instituting handshake agreements as to whom would operate where. No longer would there be the traditional band segments dedicated to a given mode or modes like CW and SSB. Instead, anyone could operate anywhere as long as his or her signal did not exceed a specific bandwidth for a particular spectral parcel. This meant that in a given band one might see a legacy mode such as SSB mixed with all sorts of emerging digital modes that have yet to be devised. This change in itself was one that a lot of folks seemed to have a problem understanding or simply opposed because they oppose any sort of change.

Another point of contention was automated digital messaging. Amateurs involved in emergency communications say that this is a must if the hobby is to maintain its status as a support organization to first responders. But opponents fear that permitting unattended operation by more and more automated stations would lead to a massive interference problem all across the High Frequency bands. Whether or not this would have happened can only be theorized on because the ARRL has asked that RM-11306 be withdrawn from consideration from the FCC's agenda and it likely will be if the regulatory agency has not done so already.

In the end, if one looks as the comments filed on this matter with the FCC, one realizes that there are really two schools of thought expressed. A small contingent says that ham radio must march forward into the age of digital communications at all costs. A much larger group appears to wants to maintain the status quo or initiate any change at what can best be described as a snails pace. In the end it looks as if the ARRL leadership after reading the comments from the ham community concluded that RM-11306 simply did not have the support from the ham radio community to make it a viable plan even if the FCC issued a Report and Order agreeing worth it. So it decided to take a step back, reassess what is needed and to try again at some later date. And in its statement withdrawing RM-11306, that's exactly what it has done.

How soon will the ARRL re-file? Only the League knows the answer to that one. But one thing is certain. Whether it's the ARRL some other group or the FCC itself leads the way, the road to regulation by bandwidth is one that the ham radio community is going to have to travel one of these days. The only real question is how soon.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

By the way, now that the ARRL has decided to withdraw RM-11306, we have decided to close down our web based straw poll as to how many folks are for or against the concept of Regulation by Bandwidth. When we took the poll off line on April 30th, 1138 of you had taken the time to cast your vote. Of these, 694 or 61% favor a shift to Regulation by Bandwidth while 395 or 34.7% oppose the idea. Another 49 or 4.3% responded by noting that you had no idea as to what Regulation by Bandwidth is really all about. (ARNewsline(tm), others)

HAM RADIO IN SPACE: KD5PLB TALKS TO SCHOOL KIDS IN GERMANY

Saturday, April 28th is a day that students at the Samuel von Pufendorf School in Floeha, Germany, will long remember. Gathered in the gymnasium, they were there to hear a voice from space. And they would not be disappointed as the voice of astronaut Suni Williams, KD5PLB, operating as NA1SS from the International Space Station rang forth from the speakers:

--

Williams audio - hear it in the MP3 version of this weeks newscast downloadable at www.arnewsline.org

--

As soon as two way contact was established, Williams went to work answering questions posed by students at the school. Here is an edited sample of her responses as supplied by PA2RPJ and PD0RKC with the first questioner interested in knowing whether she watches satellite T-V:

--

Williams audio - hear it in the MP3 version of this weeks newscast downloadable at www.arnewsline.org

--

Soon the questions became a lot more technical
and so did the answers. Here KD5PLB describes
what its like to watch lightning storms on Earth
from her vantage point in space:

--

Williams audio - hear it in the MP3 version of
this weeks newscast downloadable at www.arnewsline.org

--

And it was also a pretty dynamic event for the
students at the Samuel von Pufendorf School to
get to talk to Suni Williams flying overhead on
the I-S-S. One that they are not likely to
forget. (ARNewsline(tm), ARISS with audio by PA2RPJ and PD0RKC)

**

HAM RADIO IN SPACE: SATGATE CLOSES DO TO LACK OF USE

AMSAT's Satgate is going away. After many years
of packet message forwarding via UO-22, GO-32 and
AO-51 the Satgate System will close due to a lack of traffic being handled.

Using Satgate, traffic was automatically accepted
from the terrestrial packet networks and routed
to the satellites. It was then downloaded from
the satellite and routed into another packet
network untouched by human hands.

A total of thirty five worldwide stations were in
the system a few years ago. This has dwindled
due to this lack of traffic, maintenance
problems, change of location of command stations
and users who have become Silent Keys.

Another reason for its going away was not
stated. That being packet messaging being
replaced by electronic mail over the
Internet. That lead to a major loss of interest
in traditional packet by the worlds ham community
with the lone exception of A-P-R-S. More ham
radio space related items later on in this weeks
Amateur Radio Newsline report. (ARNewsline(tm), ANS ,W0SL)

**

Break 1

Celebrating 30 years of service to the world-wide
ham radio community. From the United States of
America, We are the Amateur Radio Newsline, heard

on bulletin stations around the world including
the N7CCD repeater serving Seattle, Washington.

RADIO SCIENCE: RESEARCHERS SAY SOLAR MAX DELAYED A YEAR

Good D-X may have to wait a little while
longer. This is because the next 11-year cycle
will most likely not start next March and peak in
late 2011 or mid-2012. This according to a
forecast issued by the NOAA Space Environment
Center in coordination with an international
panel of solar experts all of whom agree that the
cycle will begin up to a year later than
expected. Amateur Radio Newsline's Evi Simons reports:

--

If you have been waiting for improved D X
conditions on the High Frequency bands, you are
going to have to be patient a bit longer. So
says the NOAA Space Environment Center which led
a prediction panel that issued the forecast at
its annual Space Weather Workshop in Boulder, Colorado.

Expected to start last fall, the delayed onset of
Solar Cycle 24 has stymied the panel. It also
left them evenly split on whether a weak or
strong period of solar storms lies ahead, but
neither group predicts a record-breaker.

One disagreement among the current panel members
centers on the importance of magnetic fields
around the sun's poles as the previous cycle
decays. End-cycle polar fields are the bedrock of
the approach predicting a weak Cycle 24. The
strong-cycle forecasters place more importance on
other precursors extending over a several-cycle
history. Another clue will be whether Cycle 24
sunspots appear by mid 2008. If not, the
strong-cycle group might change its forecast.

In the cycle forecast issued Wednesday, April
25th, half of the panel predicts a moderately
strong cycle of 140 sunspots, plus or minus 20,
expected to peak in October 2011. The other half
predicts a moderately weak cycle of 90 sunspots,
plus or minus 10, peaking in August 2012. An
average solar cycle ranges from 75 to 155
sunspots. The late decline of Cycle 23 has helped

shift the panel away from its earlier leaning
toward a strong Cycle 24. Now the group is
evenly split between strong and weak.

The first year after solar minimum, marking the
end of Cycle 23, will provide the information
scientists need to arrive at a consensus. NOAA
and the panel decided to issue their best
estimate now and update the forecast as the cycle
progresses, since NOAA Space Environment Center
customers have been requesting this forecast for more than a year.

For the Amateur Radio Newsline, I'm Evi Simons, in New York.

--

Scientists have issued solar cycle predictions
only twice before. In 1989, a panel met to
predict Cycle 22, which peaked that same year.
